TO THE TEACHER

In essential principles *New Elementary Latin* is very similar to the authors' *Elementary Latin*, first published in 1923. The chief changes are the omission of the subjunctive; the addition of a series of sections in English on various phases of Roman life, of vocabulary reviews, of a large number of new illustrations; and the transfer of the connected Latin passages from the end of the book to their proper places after the various lessons. Thus this book meets the recommendations of the *Report of the Classical Investigation* even more faithfully than the other.¹ It is not intended, however, to supplant the other book. Schools which desire to introduce the subjunctive, at least in part, in the first year, or which prefer to use the same book for three semesters, will continue to use *Elementary Latin* with the same success and satisfaction as heretofore.

The many features of *Elementary Latin* which have been received with approval and which are retained in this book are:

1. Latin for English. — The correlation of Latin and English forms an important part of every lesson, for it is generally admitted that the chief value of first year Latin for most pupils is in the increased knowledge of

¹ Consideration was also given to the *Tentative Syllabus in Ancient Languages* (1928 Revision) of the University of the State of New York, and to other recent state and city syllabi.

English which it affords. Latin and English are correlated throughout as follows:

(a) *Vocabulary*. — The vocabulary of the lessons was taken chiefly from an unpublished list of those Latin words which have the largest number of English derivatives in ordinary prose. This list is the result of exhaustive research. The total vocabulary consists of only five hundred fourteen words, including those in special paradigms. Three hundred seventy-three of these words are primitives and one hundred forty-one are derivatives. The authors have made it a practice not to introduce Latin derivatives until after the primitive has been encountered, so that the task of mastering the lesson vocabularies may be simplified and the pupil taught to associate words according to their root meaning.

All words required by the College Board to be memorized during the first and second years are presented for intensive study in the lesson vocabularies of the *New Elementary Latin* and the vocabulary drills of the authors' *Second Latin Book* (revised). Since the Latin Word List issued by the College Entrance Examination Board supersedes all other lists as a standard, this strict conformity will be welcomed by all teachers. Most of the words required by the New York Syllabus (1928 revision) for the first and the second half-years have been used in the lessons; the complete list is included in the Appendix for review and intensive drill.

(b) *Word Study*. — Every lesson contains Latin and English Word Studies covering such topics as prefixes, suffixes, loan words, phonetic changes, spelling, interesting words, abbreviations, phrases and quotations, etc.

Topics are introduced in the order of their importance and *grow out of the material presented in the lessons*; they are not relegated to the Appendix.

(c) *Laboratory Method*. — The arrangement of a notebook giving English derivatives is explained and its use urged. Encouragement in its use is furnished by giving after each word in the lesson vocabularies one English derivative or related Latin word previously studied.

(d) *Correlation of Latin and English Grammar*. — A section of the Appendix is devoted to the elementary principles of grammar usually studied before the seventh grade. These are illustrated by English and Latin examples. The material is based upon that in use in the elementary schools. In the lessons themselves the topics treated in Elementary Grammar are assigned for review at the appropriate points. Some teachers may prefer to review this material at the outset.

In discussing matters of form and syntax, constant reference is made to English usage, and many difficult points in English grammar are elucidated (*e.g.* the relative and interrogative pronouns, sections 306–307, 320). Difficult matters are developed slowly and with constant reference to English (*cf.* the infinitive, including indirect statement, 136, 262, 465, and the participle, 344, 365, 449–451).

2. *Simplification*. — (a) *Forms*. — In accordance with certain special investigations as to relative frequency, many unimportant forms commonly found in beginners' books have been omitted.

(b) *Syntax*. — The *Report of the Classical Investiga-*

tion, Byrne's *Syntax of High School Latin*, and the latest state syllabi have been consulted in an attempt to introduce the minimum of syntax consistent with sound teaching. *The Report of the N. E. A. Committee on Uniform Grammatical Nomenclature* has been followed with few exceptions.

3. Lessons. — (a) Two methods of approach are made possible by the introduction of connected passages in every lesson. Teachers may follow the usual practice of taking up first the new form or syntax material, together with the exercises based on it. In that case the connected passages may be used after the lesson for sight reading or for assignment. On the other hand, teachers may begin with the connected passage and may develop the new grammatical material from it, after which the vocabulary, grammar, and exercises may be assigned.

(b) All words are repeated at frequent intervals in the exercises.

(c) Words are introduced in the vocabularies to a large extent in the order of their importance for English word derivation. Primitives are regularly introduced before derivatives.

(d) Constructions are introduced as far as possible in the order of their importance, and only one new construction, as a rule, is developed in a lesson.

(e) The translation of English into Latin is subordinated to the translation of Latin into English.

4. Reviews. — Systematic reviews recur at intervals of eight or ten lessons throughout the book and are intended not only to furnish drill material for oral work but also to serve as the basis for written tests. It is

expected, of course, that the teacher will conduct additional reviews, for which the material in the review lessons will prove suggestive.

5. Roman Civilization. — A comprehensive view of Roman civilization is provided in four ways: (*a*) by the large amount of graded connected reading in Latin, especially "Lucius," the continued story of a Roman boy; (*b*) by the newly added "Glimpses of Roman Life," a series of topics in English dealing with Roman customs; (*c*) by the references to carefully selected books accessible in most school and public libraries; (*d*) by the numerous illustrations with their legends.

6. The Superior Pupil. — One of the most hopeful signs in the educational field to-day is the attention which is being given to superior pupils. The large number of connected Latin passages in this book and the many references to outside reading in connection with them and with the "Glimpses of Roman Life" furnish ideal material for use with such pupils, whether they are handled as individual cases or are placed in special classes.

7. Oral Work, Plays, etc. — In the earlier part of the book conversational material is introduced as a sample of what may be done by the teacher. The pictures also may be made the basis for conversation. In the Appendix a list of classroom phrases is given. A special feature is the inclusion of two Latin plays for reading or presentation. These plays were written expressly for this book and therefore afford an excellent review of forms and vocabulary.

8. French and Spanish. — A supplement is devoted to correlating French and Spanish with Latin; it

shows the pupil how he may get the maximum profit from his Latin while studying these Romance languages.

9. Teaching Devices. — An effort has been made to furnish a number of aids for the teacher, *e.g.* *A Color Scheme for Learning Verb Forms* (289), *Vocabulary Matches* (484), drills, etc.

The *Teachers' Manual*, published by the Macmillan Company and available to teachers using this book, contains many pages devoted to helpful devices and methods for effective teaching.

The Junior High School. — It is the belief of the authors that it is often advantageous to use the same beginning Latin books in the junior and the senior high school, since such use tends to make articulation easier. Features, such as those mentioned above, which the four-year high school regards as desirable, the junior high school demands as necessary: emphasis upon the correlation of Latin and English, simplification of forms and syntax, short lessons, the introduction of interesting material in the form of readings, conversations, and plays, the use of graphic teaching devices, etc. The numerous illustrations with helpful explanations are likewise intended to make the book particularly attractive to younger pupils. The successful use of *Elementary Latin* in both junior and senior high schools leads the authors to hope that the *New Elementary Latin* may prove equally popular with both types of schools, so that closer articulation in courses and objectives may result.

Acknowledgments. — The authors wish to acknowledge their indebtedness to Miss Louise M. Weller of

the Dilworth School, Pittsburgh, for helpful suggestions with regard to the sections dealing with seventh and eighth grade English; to Miss Lillian B. Lawler of the University of Kansas, who wrote the two Latin plays expressly for this book and assisted in numerous other ways; to Mr. Charles R. Fisher of the Allegheny High School, Pittsburgh; Professor Charles H. Beeson of the University of Chicago; and Miss Helen M. Eddy of the University High School, Iowa City, who read the manuscript and offered many helpful suggestions for its improvement; to Mr. Bernard M. Allen of the Roxbury School, Cheshire, Conn., for valuable criticisms; to Mr. George Kleine for the unique scenes from the motion picture "Julius Caesar"; and to Mr. Frederic C. Shaw of the Westport High School, Kansas City, Mo., who read the proof of *New Elementary Latin* and made useful suggestions.

VOCABULARY NOTEBOOK

Many teachers have found vocabulary and derivative notebooks helpful. A large notebook of the loose-leaf variety is preferable, with page ruled in three columns for (1) Latin Words, (2) Related Words, (3) English Derivatives (see illustration). The words of the advance vocabulary should be distributed by the pupil according to the part of speech, a page being reserved for each of the five declensions of nouns, one for each of the four conjugations, etc. In the second and third columns respectively he should record as many related Latin words and English derivatives as are readily suggested. Others should be added from time to time as encountered.

It will be found helpful to have the pupil compile a separate list of the prefixes and suffixes given in this book, together with numerous examples of their use in English words.

<u>Latin Words</u>	<u>Related Words</u>	<u>English Derivatives</u>
<i>ponō, -ere, posuī, positus</i> (put, place)	<i>propōnō</i>	<i>position, positive proposition</i>
<i>mittō, -ere, misi, missus</i> (let go, send)	<i>committo, amitto, dimitto, permitto, submitto</i>	<i>commit, committal commissary, missive, mission, permission, submit</i>
<i>ducō, -ere, duxī, ductus</i> (lead)	<i>reducō, producō, educō, adducō, traducō, dux</i>	<i>ductile, reduction, educer, traduce, duke</i>

Other Types of Notebooks

Type 1 (with definitions)

<i>vocō, vocāre, vocāvī, vocātus,</i> <i>call</i>	<i>vocation — a calling, occupation convoke — call together invocation — a calling upon, a prayer, etc.</i>

NEW ELEMENTARY LATIN

If elegancy still proceedeth, and English pens maintain that stream [of new words] we have of late observed to flow from many, we shall within few years be fain to learn Latin to understand English.

— SIR THOMAS BROWNE, 1646.

NEW ELEMENTARY LATIN

LESSON I

1. You are about to begin the study of a new language. Perhaps you are a little curious and eager about it because it is something new, different from anything you have studied; or perhaps you are a little afraid of it because you think of it as something strange and difficult. Let us see what we know about it already.

Twenty-five hundred years ago Rome was one of many small towns in Italy. Its language, Latin, got its name from the district of Latium in which the town was situated. As the power of Rome spread, first over Italy and then over most of the civilized world of that day, its language came to be used everywhere. On the map opposite page 90 you can trace the growth of the great Roman Empire. You will note how it became a sort of United States of the Mediterranean World.

The modern civilization of Europe and America is largely the outgrowth of the Roman. American boys and girls play many games that Roman children played; American students read literature that was greatly influenced by the Roman; American citizens deal with political and legal ideas that are largely a Roman inheritance. To get acquainted with this Roman civilization is an important reason for studying Latin.

The Romans, however, have handed down not only their ideas but also their language. The Romance languages are the various forms which the Roman (Latin) language has taken in the course of centuries in the various parts of the Roman Empire. They are

FIG. 2. THE HEART OF THE ROMAN EMPIRE

In the Roman Forum and on the nearby hills was centered the administration of the Roman Empire. At the left, the round temple of Vesta, then the temple of Castor and Pollux, the Basilica Julia (a courthouse); on top of the hill at the right, the temple of Jupiter; in the center foreground, the temple of Julius Caesar.

Italian, French, Spanish, Portuguese, Rumanian, and even, to a large extent, English, since about sixty per cent of our English words are derived from Latin. French, Spanish, and Italian become very easy after a study of Latin. But the chief reason why you are going to study Latin is to get a better knowledge of English. The study of Latin will make English gram-

mar much easier to understand. Then again, there are Latin words, phrases, and mottoes used in English, such as *radius*, *per annum*, and *e pluribus unum*. Many Latin phrases are used in law, such as *habeas corpus*; therefore lawyers must know Latin. Many abbreviations used in English are Latin, such as *i.e.* for *id est*.

You see then that this Latin of the Romans is not so remote a thing after all and that a knowledge of it will be very useful to you.

2.

Exercise

1. How many events of Roman history can you think of?
2. What famous Romans do you remember?
3. What Roman gods can you recall?
4. What do you know about Rome as it is to-day?
5. How many Latin words, phrases, legal terms, scientific terms, mottoes, proverbs, and abbreviations can you give?

3.

GLIMPSES OF ROMAN LIFE

Children's Games

Roman children had as good times as our children have in playing games. Even the babies had their rattles. Girls had their dolls (Fig. 21); boys played various kinds of marble games with nuts (Fig. 10). The phrase **relinquere nucēs** (*to give up nuts*) meant to grow up, but "grown-ups," even the Emperor Augustus, sometimes played such games. Vacation was the time for marble games. The poet Martial says: "Sadly the boy leaves his marbles and is called back to school by the teacher — the Saturnalia [Christmas] vacation is all over."

Other amusements were spinning tops, walking on stilts, flying kites, rolling hoops, playing with toy wagons, toy soldiers, etc. Among their games were blind man's buff, hide and seek (Fig. 14), leapfrog (Fig. 3), jacks (Fig. 12). Ball games, some like our tennis and handball (Fig. 10), were favorites, especially for men.

For indoor amusement the Romans had a board game which was something like chess or checkers, and another like the many games we have in which as many moves are made on a board as are shown by the throwing of dice (Fig. 20).

Roman boys and men had their sports — not only swimming, fishing (Figs. 16, 76), hunting, etc., but also athletic contests: running, jumping, throwing the discus, boxing, wrestling, fencing.

LESSON II

ALPHABET AND PRONUNCIATION

4. The Alphabet

The alphabet used in English and in most European languages is one of the many things which we have borrowed from the Romans. The Romans in turn got it from the Etruscans, their neighbors to the north. The Etruscans received it from the Greeks, who

FIG. 4. AN ETRUSCAN ALPHABET OF 700 B.C.

adopted it from the Phoenicians. Naturally it has undergone considerable change in the course of all these borrowings. In Figure 4 you see the *abc's* in their oldest Etruscan form, scratched on the ivory edge of a wax tablet for the guidance of a schoolboy. Since Roman days the alphabet has changed little. The Romans used *i* for vowel and consonant. In the seventeenth century it became the custom in English

to use a long form of *i* for the consonant, and thus our *j* was formed. Similarly the Romans used only one character for *u* and *v*, but we have introduced the useful distinction between them, even in Latin. The original identity of the two is shown by another modern

FIG. 5. AN IMPERIAL INSCRIPTION

This inscription on stone was set up in the time of the emperor Marcus Aurelius (161-180 A.D.), whose name and titles fill the first three lines. Note the modern character of the letters.

letter, *w*, which is a double *u* in name and a double *v* in form. The letters *j* and *w* are, therefore, not found in Latin words in this book.

The Romans made no distinction between capitals and small letters. Our small letters gradually developed out of capitals in late antiquity and the Middle Ages.

5. Pronunciation

The pronunciation of Latin is quite different from that of English, especially in the vowels, and resembles that of Italian, French, German, and other foreign languages. It is relatively very easy because it conforms to a few simple rules. There are no silent letters in Latin. For tables of sounds see 600–607.

FIG. 6. INSCRIPTION ON A TOMB

The tomb was erected in honor of Tryphaena by her daughter. The letters in the first line stand for *dīs mānibus*, to the shades of the departed one.

IV

The following are ancient Latin quotations, some of which you probably have seen:

1. **Vēnī, vidī, vīcī**, *I came, I saw, I conquered* (Caesar's famous dispatch to the senate after a victory).

2. **ē plūribus ūnum**, *one from many* (found on U. S. coins).

3. **In hōc signō vincēs**, *In this sign you will conquer* (motto of Constantine, the first Christian emperor).

4. **Nōn nōvit virtūs calamitātī cēdere**, *Courage knows not how to yield to disaster*.

5. **Iniūriarū remedium est obliviō**, *Forgetfulness is the cure for injuries*.

6. **Possunt quia posse videntur**, *They can because they think they can*.

FIG. 8. A ROMAN GAME

The boy in the center apparently is trying to tag one of those who strike at him, but he may not let go the rope, which is fastened to a stake.

V

The two verses which follow were used by Roman children in some of their games:

1. **Habeat scabiem quisquis ad mē vēnerit novissimus**, *May he have the itch who comes to me last*.

2. **Rēx erit quī rēctē faciet; quī nōn faciet nōn erit**, *He will be king who does right; he who does not will not be king*.

LESSON III

FIRST DECLENSION: THE NOMINATIVE CASE

Inflection or Declension of Nouns

7. Number. — (*Study Elementary Grammar at end of this book, sections 610, 618, 619.*) In English, nearly all nouns undergo change to indicate plural number. Most nouns add **-s** or **-es**: way, ways; bush, bushes. A few form their plurals irregularly: pony, ponies; knife, knives; ox, oxen; man, men.

In Latin, most nouns undergo change of ending to indicate number.

8. Gender. — (*Study 620.*) In both English and Latin, masculine or feminine gender is assigned to nouns according to sex. This use is known as **natural gender**.

In English, nouns denoting sexless objects are classified as neuter.

In Latin, however, many nouns are regarded as masculine or feminine which are neuter in English: **via** (f.), way; **numerus** (m.), number. This use is known as **grammatical gender**. It is determined, not by the meaning of the word, but largely by its ending.

9. Case. — (*Study 621.*) In English, with the exception of the genitive (or possessive) case, change of case does not involve change of ending: nominative (denoting the subject), "The *man* sees"; accusative (denoting the object), "I see the *man*"; but genitive (denoting possession), "the *man's* hat."

In Latin, however, change of case regularly requires change of ending. The hundreds of nouns in the Latin language are divided by **case endings** into five classes called **declensions**.

10. First Declension: Nominative Case Endings

The case endings for the **nominative**, singular and plural, of the **first declension** are as follows:

	SINGULAR	PLURAL
	-a	-ae
Examples:	via	viae

These endings are preserved in many English words, as, singular, **alumna**, plural, **alumnae**. Other examples will be given later.

11. Rule. — *Nouns of the first declension are feminine (except a few which refer to males).*

12. English Word Studies

The following are English words, borrowed from the Latin first declension, which have never lost their Latin nominative endings. Consult the dictionary for the English pronunciation and meaning of these **loan words**. (Observe that in English **-ae** is usually pronounced *ē*, as in *me*.)

alumna, alumnae; antenna, antennae; larva, larvae; minutiae (singular rare).

FIG. 9. ROME IN ANCIENT TIMES

LESSON IV

USE OF THE NOMINATIVE. AGREEMENT OF ADJECTIVES

13. English Derivatives

An English word formed from a Latin word is called a **derivative**. In this book derivatives are given in parentheses after the words in vocabularies; for their meanings see the dictionary whenever necessary. Write additional derivatives in your notebook.

14. Vocabulary

NOUNS

fā'ma, report, fame	(famous)
fortū'na, fortune	(fortunate)
in'sula, island	(insulate)
vi'a, way, road, street	(viaduct)

lon'ga, long	(longitude)
mag'na, large, great	(magnify)
no'va, new, strange	(novice)
sunt, are	

15. Nominative as Subject and Predicate (*Study 608.*)

The nominative case in Latin has the same uses as in English:

(a) The subject of a verb is in the nominative case. This is called **subject nominative**.

(b) A noun or adjective used in the predicate after a linking verb (*is, are, seem, etc.*) to complete its meaning is in the nominative case. This is called **predicate nominative**.

- | | | | |
|-------------------------------|-----------------------------|-----|-----|
| (a) | (b) | (a) | (b) |
| 1. Īnsula est magna, | <i>The island is large.</i> | | |
| 2. Sicilia est insula, | <i>Sicily is an island.</i> | | |
| (a) | (b) | (a) | (b) |

16. Adjectives (*Study 612.*)

In English, an adjective does not undergo change to indicate number, gender, and case. *This* and *that*, however, change in the plural to *these* and *those*.

In Latin, an adjective indicates by its ending the number, gender, and case of the noun which it modifies. Compare the adjectives in the following Latin and English sentences:

1. *Via longa est bona, A long street is good.*
2. *Viae longae sunt bonae, The long streets are good.*

17. Rule. — *An adjective agrees in number, gender, and case with the noun which it modifies.*

18. Observe in the above sentences:

- (a) There is no word in Latin for *a*, *an*, or *the*.
- (b) The Latin adjective regularly follows its noun.
- (c) The adjective may modify its noun directly or in the predicate.

19. Exercises

Oral. (Read in Latin and translate into English.)

1. *Īnsula est magna.* 2. *Via est nova.* 3. *Viae sunt longae.* 4. *Viae longae sunt bonae.* 5. *Fortūna est bona.* 6. *Via bona est longa.* 7. *Fāma est bona.* 8. *Īnsulae novae sunt magnae.* 9. *Īnsula nova est longa.*

Completion. (Copy these sentences and add the correct endings.) 1. Īnsula nov___ est magn___. 2. Viae bon___ sunt nov___. 3. Magn___ est fām___. 4. Viae nov___ sunt bon___. 5. Fortūn___ est nov___.

Written. 1. Long Island is large. 2. Great fortune is good. 3. The islands are long. 4. A new road is good.

Note. — Enter the above words in your notebook and find additional derivatives.

22.

English Word Studies

The following are additional **loan words**, borrowed from the Latin first declension, often found in high school textbooks of science:

nebula, *nebulae*; *papilla*, *papillae*; *vertebra*, *vertebrae*

Can you find others?

23. Formation of the Present Indicative Active

(Study 613, 627.)

In English, verbs sometimes change to indicate person: *I have*, *he has*; sometimes also to indicate number: *I am*, *we are*; but usually the distinction of person and number is made only by use of the personal pronouns (*I*, *you*, *he*, *we*, *they*).

In Latin, the personal pronoun subjects are usually omitted, and sets of endings called **personal endings** serve to indicate the person and number of all verbs. The following are used in forming five of the six tenses of the **indicative active** of all verbs:

	SINGULAR	PLURAL
1st person	-ō (or -m) = <i>I</i>	-mus = <i>we</i>
2nd "	-s = <i>you</i>	-tis = <i>you</i>
3rd "	-t = <i>he, she, it</i>	-nt = <i>they</i>

Present Stem. — The present infinitive active of all regular verbs ends in -re: *accūsāre, parāre*.

FIG. 12. PLAYING JACKS WITH KNUCKLEBONES
Clay figurines in the British Museum.

The present tense of any verb is formed by adding the personal endings directly to the **present stem**, obtained from the infinitive by dropping the ending **-re**. The hundreds of regular verbs in Latin are divided, according to the present stem, into four classes called **conjugations**. The present stem of verbs of the **first conjugation** ends in **-ā**. Thus **parō, parāre** (present stem **parā-**) is conjugated in the present indicative active as follows:

SINGULAR	PLURAL
pa'rō, <i>I prepare, am preparing, do prepare</i>	parā'mus, <i>we prepare, are preparing, do prepare</i>
pa'rās, <i>you prepare, are preparing, do prepare</i>	parā'tis, <i>you prepare, are preparing, do prepare</i>
pa'rat, <i>he, she, it prepares, is preparing, does prepare</i>	pa'rant, <i>they prepare, are preparing, do prepare</i>

a. **Remember** that all vowels are shortened before **-nt** and final **-m** or **-t**, and that **-ā-** disappears entirely before final **ō** in the first singular.

b. **Observe** the three ways to translate each Latin verb form — **common**, **progressive**, and **emphatic**. In English, when *am* and *do* are used as auxiliary verbs, they have no Latin equivalent.

24. Drill. — Give the present indicative active of **accūsō** and **portō**, translating each form in three ways

25. Exercises

Oral. 1. Accūsō; parās; portat. 2. Portāmus; ac-cūsātis; parant. 3. Ubi est Longa Īnsula? 4. Causae sunt vērae. 5. Īnsula novā est parva. 6. Ubi est silva magna? 7. Ubi sunt puellae bonae?

Completion. 1. Via bon__ est nov__. 2. Caus__ sunt bon__. 3. Ubi est puell__ parv__? 4. Portā__ (we); para__ (they); accūsā__ (you, plur.); porta__ (she).

Written. 1. The reason is true. 2. The new islands are small. 3. Where are large forests? 4. He does accuse; they prepare; he is carrying.

FIG. 14. CUPIDS PLAYING HIDE AND SEEK

From an ancient wall painting.

29. Accusative: Direct Object (*Study 622, b; 623, b.*)

The endings of the accusative in the first declension are:

	SINGULAR	PLURAL
	-am	-ās
Examples:	viam	viās

1. *Anna nautam accūsāt, Anna blames the sailor.*
2. *Nauta Annam accūsāt, The sailor blames Anna.*
3. (a) *I saw him.* (b) *He saw me.*

Observe in the preceding sentences:

(a) In 1 and 2 a noun in English does not undergo change to indicate the direct object in the accusative (objective) case, but difference in case depends solely upon word order and sense.

(b) In 3 (a) and (b) personal pronouns, on the other hand, have different forms for the accusative.

(c) In Latin the accusative of a noun is distinguished from the nominative by its ending.

30. Rule. — *The direct object of a transitive verb is in the accusative (613, a).*

Caution. — A noun is not necessarily in the accusative because it is used with or after a verb. **Est** and **sunt** serve as an equation sign (=) and take the same case after them as before them:

Italy is a country, Italia est terra.

Query. — Why is it incorrect to say in English, *It is him?*

FIG. 15. A ROMAN KEY OF BRONZE

31. Drill. — Give the Latin nominative and accusative, singular and plural, of *island*, *fortune*, *matter*, *water*.

32. Agreement

1. **Nauta aquam portat**, *The sailor carries water.*
2. **Viam parāmus**, *We are preparing a way.*
3. **Anna et nauta causās probant**, *Anna and the sailor approve the reasons.*

Observe the following points:

- (a) The verb in each sentence shows the person and number of its subject by means of personal endings.
- (b) The personal endings are not translated by pronoun subjects when a noun subject occurs.
- (c) The verb stands last.
- (d) Two singular subjects connected by **et** require a plural verb.

33. Rule. — *A verb agrees with its subject in person and number.*

FIG. 16. ROMAN FISHHOOKS

34. Exercises

Oral. 1. **Nautās accūsō.** 2. **Causās bonās probātis.**

 5. **Nutae multās causās probant.** 6. **Puella et nauta multam aquam portant.**
 7. **Causae sunt multae et vērae.** 8. **Nutae māteriam portant.**

Completion. 1. Naut— (*plur.*) accūsāmus. 2. Aqu— porta— (*he*). 3. Ubi sunt silv—? 4. Naut— (*sing.*) accūsā — (*you, plur.*). 5. Causam bon— probā— (*we*).

36. GLIMPSES OF ROMAN LIFE

Roman Roads and Travel

While the Romans had no railroads, automobiles, steamships, or airplanes, they had better facilities for getting about than the modern world had until the introduction of steamships and steam railroads a hundred years ago. This was due to their wonderful system of roads. Only in the last few years, as a result of automobile travel, have our roads begun to compare with the Roman roads. The secret of these roads was that they were built like walls (cf. *viam mūnīre*, 201, 7).

FIG. 18. VIA LATĪNA

The Via Latīna ran from Rome to the southeast.

The Romans were such excellent road builders because they saw the need of having good highways in order to maintain communication with the various parts of their extensive empire. Even in the early days when Rome was conquering Italy, it started its policy of road construction. The most important road in Italy, the Appian Way (cf. Fig. 17), was built by Appius Claudius in 312 B.C. It led to Capua, the most important city in southern Italy. Later it was extended across Italy to Brundisium, the seaport from which travelers sailed to Greece and the Orient. Parts of the Appian Way and of other Roman roads are in use to-day.

Horses, mules, carriages or omnibuses, and litters were used by travelers who did not wish to go on foot. Along all the roads there were milestones to indicate distances. Often there were benches on which the weary traveler might rest. Watering troughs for horses and fountains for men were provided. Of course travel was slow. Fifty to sixty miles a day was fast time for people in a great hurry. Ordinarily, twenty-five to thirty-five miles was a fair daily average. A trip that we now make comfortably in a night while asleep in a Pullman car took ten or twelve days.

If the roads were better than ours, the hotel accommodations were much worse. In fact, there were only small inns, which were usually dirty and uncomfortable. The wealthier classes stayed overnight at country villas belonging to themselves or their friends, or in the town houses of people they knew. It was not uncommon for rich Romans to have half a dozen or more villas scattered throughout Italy.

Travel by water was avoided as much as possible. Roman ships were small sailing vessels which were also equipped with oars (Figs. 19, 25). Sailing was dangerous, and the boats stayed near the shore as much as possible.

English Word Studies

The following, now regarded as English words, have been adopted from the Latin without change in the nominative singular. Their plurals sometimes end in *-ae*, but usually in *-s*, like most English nouns:

amoeba, arena, aurora, camera, copula, formula

FIG. 20. SCENE IN AN INN

This ancient picture shows, on the left, two men quarreling over a game; on the right, the innkeeper telling them to do their quarreling outdoors.

39. Imperfect Indicative Active (*Study 627, a.*)

A regular verb forms its imperfect tense by adding the tense sign **-bā-** to the present stem and then attaching the personal endings:¹

SINGULAR	PLURAL
parā' bam , <i>I was preparing, did prepare, prepared</i>	parābā' mus , <i>we were preparing, etc.</i>
parā' bās , <i>you were preparing, etc.</i>	parābā' tis , <i>you were preparing, etc.</i>
parā' bat , <i>he, she, it was preparing, etc.</i>	parā' bant , <i>they were preparing, etc.</i>

Note that the personal ending for the first person singular is **-m** (not **-ō** as in the present tense). Observe that the Latin imperfect, like the English progressive past, denotes *continuous, habitual, or repeated* action (or being) in past time.

40. Drill. — Give the imperfect indicative active of **amō, accūsō, vāstō**, with meanings.

41. Exercises

Oral. 1. Ubi erat Anna? 2. Naut**am** accūsābāmus. 3. Causās bonās probātis. 4. Ubi est terra nova? 5. Viae erant lātae et plānae. 6. Nauta fili**am** amābat et filia naut**am** amābat. 7. Terrās multās vāstābātis. 8. Agricolae aqu**am** et māt**er**iam portābant.

Completion. 1. Terr__ amābat. 2. Terr__ erat lāt__ et plān__. 3. Terr__ (*sing.*) vāstā__ (*we were*). 4. Nautae aqu__ ama__ (*pres.*). 5. Anna et Clāra puell__ bon__ era__.

¹ A similar formation is seen in the English solemn style: **accūsā-bā-s**, (thou) *accuse-d-st*.

Written. 1. He accused; we were preparing; they did love. 2. We love; you (*sing.*) carried; they are getting. 3. They laid waste the land. 4. The little street was new and wide. 5. Where are the good streets?

English Word Studies

The following words have been borrowed without change from the Latin. Each has an English plural in -s (wherever used):

inertia, insomnia, militia, nausea, saliva

45.

Genitive (*Study 623, d.*)

In English, possession is indicated by the genitive (possessive) case ending in -'s, or by the accusative (objective) with *of*: *the boy's father* or *the father of the boy*.

In Latin, we have already seen that a noun undergoes change in case ending to show a change in case relation. Possession is expressed by the **genitive** case. The genitive endings of the first declension are:

	SINGULAR	PLURAL
	-ae	-ārum
Examples:	viae	viārum

1. insulae viae, *the roads of the island.*
2. insulārum viae, *the roads of the islands.*

46. Drill. — Write the Latin nominative, genitive, and accusative, singular and plural, of *water, supply, sailor, land*.

47. Exercises

Oral. 1. Agricolās amāmus. 2. Fīlia agricolae est parva. 3. Puella magnam cōpiam aquae portat. 4. Magnās cōpiās īnsulae clārae spectābāmus. 5. Est¹ cōpia aquae. 6. Cūrae Annae erant multae sed parvae. 7. Nautae cōpiam aquae clārae portābant. 8. Fōrma īnsulae erat nova.

FIG. 22. CŌPIA AQUAE BONAE

This aqueduct near Rome was built by the emperor Claudius (41-54 A.D.).

Completion. 1. Ann — (*Anna's*) cūrae erant mult—. 2. Magn — erat cūra naut— (*of the sailors*). 3. Silvās īnsul — clār — spectā — (*they looked at*). 4. Cōpiam aqu — bon — portā — (*I was carrying*). 5. Viae lāt — sunt bon —.

¹ Supply *there*, which is omitted in Latin when it does not refer to place.

Written. 1. The sailors accused Anna. 2. Anna looked-at¹ the sailors. 3. Where did they get the water supply²? 4. The sailor's reasons were true. 5. We are carrying an abundance of good water.

FIG. 23. RUINAE RŌMĀNAE

FIG. 24. PECŪNIA

In early times the Romans did their trading with sheep and oxen (*pecus*). Then bars of bronze bearing the figure of an ox, as above, were used for money. Each piece weighed five pounds and was worth sixteen cents. But the cost of living was very low then.

50.

English Word Studies

The following are additional loan words of the first declension with an English plural in *-s*:

area, corolla, dementia, toga, villa

¹ Memorize the nominative, genitive, and gender, in addition to the meaning, of each noun as printed in all vocabularies.

51. Future Indicative Active (*Study 626, c.*)

The **future active** is formed by adding the tense sign **-bi-** (corresponding to *shall* and *will* in English) to the present stem before attaching the personal endings:

SINGULAR	PLURAL
parā'bō, <i>I shall prepare</i>	parā'bimus, <i>we shall prepare</i>
parā'bis, <i>you will prepare</i>	parā'bitis, <i>you will prepare</i>
parā'bit, <i>he, she, it will prepare</i>	parā'bunt, <i>they will prepare</i>

Note that the future sign **-bi-** loses *i* before **-ō** in the 1st sing. and changes to **-bu-** before **-nt** in the 3rd plur.

52. Drill. — Give the future indicative active, with meanings, of **spectō, probō, nāvigō**.

53.

Exercises

Oral. 1. Ubi magnam cōpiam pecūniae parābis?
 2. Ad terram novam nāvigābimus. 3. Pecūnia est vērā causa cūrārum. 4. Magnae undae sunt ad īnsulam.
 5. Nautae ad īnsulam nāvigābunt. 6. Nautae erant ad terram. 7. Praedam ad silvam portābunt. 8. Anna cōpiam aquae ad familiam portābit.

Completion. 1. Ubi sunt silv___ īnsul___ (*of the island*)?
 2. Est cōpia māteri___ bon___. 3. Cōpiam pecūni___ et praed___ parā___ (*we shall get*). 4. Familia naut___ (*sailor's*) ad īnsul___ lāt___ nāvigā___ (*will sail*).

Written. 1. We shall sail to the new land. 2. They will look-at the large waves. 3. I shall carry the money to the farmer's family. 4. Many are the cares of the sailors. 5. The roads of the large island were level and wide.

56.

English Word Studies

Always try to see the relation between the meaning of the English derivative and the Latin word from which it comes, and then use the derivative in a sentence.

(a) A thing is "familiar" when it is well known, like something belonging to the *family*.

(b) An author is a man of "letters," or a "literary" man; a "literal" translation is one that is almost *letter for letter*.

(c) An "undulating" motion is like that of the *waves*.

(d) A "mandate" is something *intrusted* to a person or a group, as the government of a weak nation.

(e) A "navigable" river is one on which *sailing* is possible.

(f) A "novelty" is something *new*.

(g) A person who is on "probation" is being *tested*.

57. Dative: Indirect Object (*Study 623, c.*)

The endings of the **dative** case in the **first declension** are:

	SINGULAR	PLURAL
	-ae	-is
Examples:	viae	viis

Nautae pecūniam dōnō, *I give money to the sailor, or I give the sailor money.*

Observe the following points:

(1) In addition to the direct object (**pecūniam**, *money*) in the accusative, an indirect object (**nautae**, *sailor*) may be used to indicate the receiver.

(2) In Latin the indirect object is expressed by the dative, but in English it may be expressed either by the dative, as in the second translation, or by the accusative with *to* (or *for*).

(3) In English there is no separate form for the dative, as there is in Latin.

(4) In Latin and English the dative is placed before the accusative.

(5) The genitive and dative singular have the same ending.

58. Rule. — *The indirect object of a verb is in the dative. It is used with verbs of giving, reporting, telling, showing, etc.*

Caution. — After verbs of motion like “come” and “go,” *to* is expressed in Latin, as in English, by a preposition (**ad** with the acc.).

1. He reported the accident *to the officer* (dative of indirect object).

2. He went *to the city* (accusative with **ad**).

59. Drill. — Give the Latin nominative, genitive, dative, and accusative, singular and plural, of *family, money, care, reason, farmer.*

60.

Exercises

Oral. 1. Nautīs poenam nūntiābimus. 2. Familiae pecūniam dōnābit. 3. Fortūnam bonam et fāmam magnam amāmus. 4. Puellae litterās mandābimus. 5. Agricollīs victōriam grātam nūntiābō. 6. Aquam clāram et bonam ad īnsulam parvam portābant. 7. Annae viās silvae mōnstrābō. 8. Anna Clārae magnam pecūniam dōnābit.

Completion. 1. Pecūniam naut___ (*plur.*) dōnābimus. 2. Nautae _____ (*to the islands*) nāvigābunt. 3. Litterās naut___ (*sing.*) mandābō. 4. Litterās _____ (*to Anna*) portā___ (*she will carry*). 5. _____ (*to Clara*) pecūniam dōnā___ (*she gave*).

Written. 1. We shall intrust the money to Anna. 2. He is giving money to many families. 3. He will report the punishment to Anna. 4. I shall intrust the letter to the sailor. 5. They point-out the wide road to the sailors.

61.

vī'ta, vī'tae, f., <i>life</i> (vital)	ser'vō, servā're, <i>save, guard</i> (conservation)

63. Latin Phrases in English

Nova Scōtia, *New Scotland*, a province in Canada.
 aqua vītae, *water of life*, formerly applied to alcohol.
 ad nauseam, *to (the point of) seasickness or disgust*.

64. Ablative

In English, the object of any preposition is in the accusative (objective).

In Latin, the object of some prepositions is in the accusative; of others, in a special case called the **ablative**, the endings of which are:

	SINGULAR	PLURAL
	-ā	-īs
Examples:	viā	viīs

65. Ablative of Means

Many ideas expressed by prepositional phrases in English are expressed in Latin by the ablative alone without a preposition, as the following common type:

Litteris victōriam nūntiant, They report the victory by-means-of a letter.

Observe that *litteris* (abl.) shows *by-what-means* they report, and that no preposition is used.

66. Rule. — *Means or instrument is expressed by the ablative without a preposition.*

67. Sentence Analysis. — Before writing the translation of an English sentence into Latin, make it your practice to place above every noun the case and number required in the Latin sentence, as follows:

NOM. S. ACC. S. DAT. S.

1. The *man* gave a *book* to the *boy*.

GEN. S. NOM. S. ACC. S. ABL. S.

2. My *friend's* *son* saved his *life* by *flight*.

Completion. 1. *Victōri___ (by victory) terram servā___ (we saved).* 2. *Aqu___ (with water) silvam serva___ (they save).* 3. *Pecūni___ nautās incitā___ (I shall urge on).* 4. *Cōpi___ (with troops) insulam occupā___ (they will seize).* 5. *Pecūniam agricol___ (to the farmer) dōnā___ (I shall give).*

Written. 1. By-the-victory we shall save the island.
 2. We urged on the sailors with-money. 3. The memory of (their) wrongs will arouse the sailors. 4. I shall announce the victory to the family. 5. The farmers saved the timber of the forest with-water.

First Declension: A Summary

ENDINGS			ENGLISH FORCE	<i>via longa, a long way</i>	
SING.	PLUR.			SING.	PLUR.
<i>Nom.</i>	-a	-ae	Subject	<i>vi'a lon'ga</i>	<i>vi'ae lon'gae</i>
<i>Gen.</i>	-ae	-ārum	Possessive (<i>of</i>)	<i>vi'ae lon'gae</i>	<i>viā'rum lon-</i> <i>gā'rum</i>
<i>Dat.</i>	-ae	-īs	Indir. obj. (<i>to or for</i>)	<i>vi'ae lon'gae</i>	<i>vi'īs lon'gīs</i>
<i>Acc.</i>	-am	-ās	Direct obj.	<i>vi'am lon'gam</i>	<i>vi'ās lon'gās</i>
<i>Abl.</i>	-ā	-īs	<i>from, by,</i> <i>with, in</i>	<i>vi'ā lon'gā</i>	<i>vi'īs lon'gīs</i>

Observe the following points:

- (1) The nominative and ablative singular both end in **-a**, but the **-a** is long in the ablative.
- (2) The genitive and dative singular and the nominative plural have the same ending (**-ae**).
- (3) The dative and ablative plural have the same ending (**-īs**).
- (4) Most of the endings contain **-a**, for this is the **A-Declension**.

72. Base. — That part of a word to which endings are attached is called the **base**. The base of a noun or adjective is obtained by dropping the genitive singular ending: gen. sing., **viae**, base, **vi-**.

73. Drill. — Decline together in all cases, singular and plural (like **via longa**), **cōpia magna**, **silva grāta**, and **victōria parva**.

74. Present Imperative Active

Commands are expressed in Latin and English by the **imperative mood**.

The present active imperative singular of all conjugations is the *present stem* of the verb (23): **vocā**, *call!* In all conjugations except the third, the plural is formed by adding **-te** to the singular: **vocāte**, *call!*

75. Drill. — Form the singular imperative of *fight*, *praise*, *carry*, *report*; the plural imperative of *give*, *accuse*, *save*, *set free*.

76. Exercises

Oral. 1. **Servā pecūniam tuam** et pecūnia tua tē (*you*) servābit. 2. **Amā filiam tuam** et filia tua tē amābit. 3. Nunc quīnta hōra est; nāvigābimus. Mōnstrāte **viam!** 4. **Nautae vītā agricolārum** laudant et agricolae vītā **nautārum** laudant. 5. Nunc est hōra! **Pugnāte et liberāte prōvinciam!**

Completion. 1. **Incitā**___ (*imper. plur.*) **naut**___ (*plur.*). 2. **Vāstā**___ (*imper. plur.*) **prōvinci**___ (*sing.*). 3. **Laudā**___ (*plur.*) **puellās**. 4. **Dōnā pecūniam tuam agricol**___ (*sing.*). 5. **Agricolae**, **laudā**___ **filiās bon**___.

Written. 1. Girls, look-at the large waves. 2. Accuse the farmer and he will fight. 3. Intrust your fame to fortune. 4. Sailors, now sail to the province and announce the victory.

77. Latin Words in French, Spanish, and Italian

The Romance languages, which are derived from Latin, have borrowed words from it with little or no change. This may be seen at a glance from the following list of nine words selected from the vocabularies of previous lessons.

FIG. 28. PUELLA RŌMĀNA
A marble bust in a museum in Rome.

FRENCH	SPANISH	ITALIAN
accuser	acusar	accusare
porter	portar	portare
matériel	materia	materia
terre	tierra	terra
forme	forma	forma
famille	familia	famiglia
lettre	letra	lettera

Judging from the Latin, what does each of these French, Spanish, and Italian words mean?

(For the relation of Latin to the Romance languages, see Appendix, **French and Spanish through Latin, 662-679.**)

81. Multiple-Choice Vocabulary Test

(*To the Teacher.*) Make up a test of ten words, giving five meanings for each Latin word. Place a mimeographed copy in the hands of each pupil and have him

underscore the correct meaning.¹ Such a test should be limited to two minutes. *Sample:*

1. portō . . . get sail carry seize report

82. Perception Cards for Word Reviews. — An excellent way to review vocabularies is by the use of “flash” cards. The Latin word should be printed on one side and the English meaning on the other. The lettering should be large enough to be seen clearly when held before the class.

83. English Word Studies

Give the nominative, genitive, gender, and meaning of the Latin noun suggested by each of the following English derivatives:

aqueduct, causal, copious, curate, fortunate, injure, insulation, literature, memorable, nautical, pecuniary, penalize, pugnacity, viaduct

84. Form Review

Drill. — (a) Give the singular and plural of the following nouns in the cases required:

- (1) **victōria** in the dative; (2) **poena** in the genitive;
- (3) **unda** in the ablative; (4) **insula** in the accusative;
- (5) **littera** in the nominative.

(b) Translate into Latin:

- (1) *a large island* in the nom., sing. and plur.
- (2) *the true reason* in the gen., sing. and plur.
- (3) *a new letter* in the dat., sing. and plur.
- (4) *a long battle* in the acc., sing. and plur.
- (5) *great wrong* in the abl., sing. and plur.

¹ For these and other tests it will be found much more convenient to use the *Progress Tests in Latin*, by B. L. Ullman and A. W. Smalley, published by The Macmillan Company.

85. Blackboard Exercise (*To the Teacher*). — Write a number of miscellaneous forms in columns and ask for the possibilities of each with regard to case and number.

86. Form Tests

(*To the Teacher.*) Time-limited tests of the following type will be found helpful for both nouns and verbs, and will require little time to administer if mimeographed copies are prepared.

Sample: Place a check mark in the proper square to show the case and number of the Latin word.

91. English Word Studies

A number of Latin verb forms are preserved as English words. First conjugation: **veto, habitat, ignoramus, mandamus.** Second conjugation: **tenet.** For their meaning, see the dictionary.

The Latin ablative of the first declension is preserved in English in the word **via**: "I am going to New York *via* (by way of) Pittsburgh." The ablative plural is found in **gratis**: "He is giving this *gratis*" (out of favor, *i.e.* for nothing). *Gratis* is a contracted form of **grātiis**.

| (4) <i>a famous language</i> | in the dative, singular and plural. |

95. Prepositions of Place: *In*

In the preceding lessons the various relations of the English accusative with *of, to, for, by, and with* have been expressed in Latin by means of case endings without the use of prepositions. But certain constructions of the English accusative with prepositions require corresponding prepositions in Latin. Chief among these constructions in Latin are the three constructions of place — answering the questions (a) *Where?* (b) *Where from?* (c) *Where to?* — which will be discussed in this and the following lessons.

a. **Place Where.** *In* with the ablative = *in* or *on*.

in silvā, in a forest.

Examples:

in viīs, on the streets.

96. Drill. — Write the Latin for the words in italics:

1. *Remain* and see the show.
2. They saw me *on the island*.
3. He hunted *in the provinces*.
4. Show me your new watch.

97.

Latin Forms of English Names

Many English names of boys and girls are derived from Latin words (*a*) without, or (*b*) with change:

(*a*) Alma, *fostering*; Clara, *clear, bright*; Leo, *lion*; Stella, *star*; Sylvester, *pertaining to the woods*.

(*b*) Mabel, from **amābilis**, *lovable*; Belle, from **bella**, *beautiful*; Florence, from **flōrentia**, *flourishing*; Grace, from **grātia**, *grace, favor*; Margaret, from **margarīta**, *pearl*.

The following names were in common use among the Romans:

August, Augustus, *venerable*; Rufus, *red-haired*; Victor, *conqueror*; Vincent (**vincēns**), *conquering*.

Other Roman names still used in English are:

Emil and Emily (**Aemilius**, **Aemilia**); Cecilia (**Caecilia**); Claudia; Cornelius, Cornelia; Horace (**Horātius**); Julius, Julia; Mark (**Mārcus**); Paul (**Paulus**).

Exercise. — See whether any members of your class have names derived from Latin which are not included here.

101. Second Declension: Nouns and Adjectives in -us

All nouns studied thus far have the genitive singular ending **-ae** and belong to the **first declension**. Nouns of the **second declension** have the genitive singular ending **-ī**; the endings of the other cases also are different. Nouns ending in **-us** in the nominative are masculine.

Adjectives of the first and second declensions are declined in the feminine like nouns of the first declension and in the masculine like those of the second declension.

ENDINGS		ENGLISH FORCE	ser'vus bo'nus, a good slave (base, serv- bon-)	
SING.	PLUR.		SINGULAR	PLURAL
Nom. -us (ius)	-ī	Subject	ser'vus bo'nus	ser'vī bo'nī
Gen. -ī	-ōrum	Possessive	ser'vī bo'nī	servō'rum bo- nō'rum
Dat. -ō	-īs	Indir. obj.	ser'vō bo'nō	ser'vīs bo'nīs
Acc. -um	-ōs	Direct obj.	ser'vum bo'num	ser'vōs bo'nōs
Abl. -ō	-īs	With prep- ositions	ser'vō bo'nō	ser'vīs bo'nīs

Observe that:

(a) The genitive singular and the nominative plural have the same ending (**-ī**), just as these cases have the same ending (**-ae**) in the first declension.

(b) The dative and ablative singular have the same ending (**-ō**), likewise the dative and ablative plural (**-īs**); the latter is the same as in the first declension.

(c) Several of the endings include an **-o**, for this is the **O-Declension**.

(d) Nouns (not adjectives) ending in **-ius** usually contract **-iī** to

-ī in the genitive singular: *so'ciī* becomes *so'cī*. The accent is not changed. The -i-, being a part of the base, appears in every form: dat. *so'ciō*, etc.

Caution. — The nominative plural does not contract.

(e) The nominative singular and plural are preserved in many English words: *alumnus*, *alumni*. Other examples are given in 104.

102. Drill. — (a) Decline *carrus parvus*, *socius meus*.

(b) Give in Latin:

- (1) *a good cart* in the nominative, singular and plural.
- (2) *a new comrade* in the genitive, singular and plural.
- (3) *a small number* in the dative, singular and plural.
- (4) *a large forest* in the accusative, singular and plural.
- (5) *a public slave* in the ablative, singular and plural.

103.

Exercises

Oral. 1. *Amīcitiam sociōrum merēmus*. 2. *Magnus numerus servōrum est in viā lātā*. 3. *Sociīs meīs et tuīs carrum novum mōnstrābō*. 4. *Vidēte magnum numerum carrōrum altōrum in viā pūblicā*. 5. *Filia mea servōs tuōs laudat*. 6. *Agricolae, liberāte servōs et merēte grātiā patriae*. 7. *Parvam cōpiam aquae bonae in īsulā tenēbāmus*.

Written. 1. Where did you see the allies' carts? 2. The slaves did not remain on the streets. 3. The strange language terrified the slaves. 4. We shall keep a large number of good wagons.

104. English Word Studies

The following are some words of the *-us* type preserved in English in their original form. Note that in English *-ī* is pronounced like *-i* in mile:

107.

The Vocative Case

In English, the *person spoken to* is said to be the "nominative of address."

¹ The shorter forms ā and ē are used only before words beginning with a consonant (except h).

In Latin, there is no difference in form between the subject nominative and the nominative of address, except that **-us** and **-ius** nouns and adjectives of the second declension have a special case of address in the singular known as the **vocative** (from **vocō**, *call*). That of the **-us** nouns ends in **-ě**, of the **-ius** nouns in **-ī**:

Ubi estis, Mārce et Lūcī? *Where are you, Marcus and Lucius?*

108. Drill. — Give the Latin nominative or the vocative (whichever is required to show address) of the following: *prisoner, comrade, sailor, slave, farmer, daughter, friend.*

109. Prepositions of Place: *Ab, Dē, Ex*

$\left. \begin{array}{l} \text{ā, ab} \\ \text{dē} \\ \text{ē, ex} \end{array} \right\} \text{used with the ablative} = \text{from.}$

Examples: **ā viā**, (*away*) from the road.

dē silvā, (*down*) from the forest.

ex aquā, (*out*) from the water.

While all three prepositions convey the general idea of separation (*from*), **ab** means *away from the outside*; **ex**, *out from the inside*; **dē**, merely *from* when it is not important to distinguish between *away from* and *out from*. Sometimes **dē** means *down from*. See diagram:

Written. 1. My daughter had a large number of true friends. 2. Brutus, move the prisoners from the island. 3. My friends carried the timber out-of the woods. 4. The allies are now summoning forces from many provinces. 5. One-at-a-time they sailed from the island to the new land.

111.

Latin and English Word Formation

A great many Latin words are formed by joining prefixes (*prae* = *in front*; *fixus* = *attached*) to *root* words. These same prefixes, most of which are prepositions, are those chiefly used in English, and by their use many new words are continually being formed. Thus through them English *lives* and grows — without them it would be *dead*.

Examples of the prefixes **ab-**, **dē-**, and **ex-** are:

(a) **ab-** (**abs-**, **ā-**): *a-vocation*, *ab-undance*, *abs-tain*.

(b) **dē-**: *de-fame*, *de-form*, *de-ter*, *de-viate*.

(c) **ex-** (**ē-**, **ef-**): *ex-alt*, *ex-port*, *ex-pect* (from **spectō**), *e-voke*.

Define the above words according to prefix and root. For root words, see previous vocabularies.

The following are other examples of the prefix **ex-** in English: *ex-cuse*, *e-dict*, *ex-empt*, *ef-fect*, *e-gress*, *ex-it*.

113. GLIMPSES OF ROMAN LIFE

Slaves

In the earliest days the Romans had few slaves, but as they prospered they came to depend more and more on slaves to do their work. Many slaves were obtained by the conquest of foreign nations. A large number came from the Orient and spoke Greek. Many of these became teachers, doctors, musicians, actors, bookkeepers, etc.

The lot of the slave was not as hard as we might imagine, though he was often enough mistreated by a cruel master. Slaves were given an allowance, and the thrifty slave could hope to save enough in the course of years to buy his freedom. Masters often granted freedom out of gratitude for services rendered. Many of these freedmen became very rich and influential. A fine example of the intimate relation of master and slave is that of Cicero and his secretary Tiro, a brilliant man who invented a system of shorthand. Some of Cicero's letters show the greatest affection for Tiro.

The wealthy classes kept large numbers of slaves, all of whom had their special tasks. One might be in charge of polishing the silver, another of writing letters, another of announcing the guests or the hour of the day, etc.

Disobedient slaves were punished in various ways. The master had the right to kill a slave, but naturally he was not often inclined to do so, as he would be destroying his own property by doing this. Flogging was a common punishment. Another was to send a city slave to the farm, where the work was harder.

Runaway slaves when caught were branded on the forehead with the letter **F**, which stands for **fugitivus**. You can guess the meaning of the word from the English derivative.

pu'er, pu'erī, m., *boy* (puerile)
vir, vi'rī, m., *man, hero* (virile)

ADJECTIVES

li'ber, li'bera, *free* [līberō]
nos'ter, nos'tra, *our* (nostrum)
sa'cer, sa'cra, *sacred* (desecrate)

115. Second Declension: Nouns and Adjectives in -r

Masculine nouns and adjectives whose base ends in -r omit the ending in -us in the nominative singular. Such words accordingly end in -er or -r in the nominative. The genitive singular shows whether -e- is retained before -r in the other forms. In memorizing vocabularies, always note carefully (a) the *nominative*, (b) the *genitive*, (c) the *gender* of every noun.

a'ger nos'ter, our field (base, agr- nostr-)				pu'er li'ber, a free boy (base, puer- liber-)

Abl.	a'grō nos'trō	a'grīs nos'trīs		pu'erō li'berō	pu'erīs li'berīs		

Note. — (1) Nouns and adjectives like **puer** and **liber** have the *-e-* throughout; those like **ager** and **noster** have it only in the nominative singular, while **vir** has no *-e-* at all. Most *-er* words are like **ager**; no others are like **vir**.

(2) The English derivative will usually help determine whether the *-e-* is retained or not; *e.g.* *puerile*, *liberal*, *miserable*; *agriculture*, *sacred*, *magistrate*.

116. Drill. — Decline **magister amicus, ager malus, vir liber**.

Written. 1. Give Anna the boy's money. 2. Our country is free and sacred. 3. The farmers were moving the timber out-of the forest to the water with horses. 4. I see many horses in our friends' fields. 5. The teacher is showing the shapes of the letters to the boys and girls.

118. English Word Studies

Several Latin words of the *-er* type are in common use in English:

Nouns: **arbiter, cancer, minister, vesper.**

Adjectives: **integer, miser, neuter, sinister** (the first two are used as nouns in English).

Assimilation. — Some prefixes change their final consonants to make them like the initial consonants of the words to which they are attached. This is called **assimilation** (**ad** = *to*; **similis** = *like*).

The prefix **ad-** is generally assimilated. Define the following — all formed from words in the previous vocabularies: *ac-curate*, *al-literation*, *an-nounce*, *ap-paratus*, *a-spect*, *as-sociate*, *ad-vocate*.

Additional examples of assimilation of **ad-** are: *ab-breviate*, *af-fect*, *ag-gressive*, *ac-quire*, *ar-rogant*, *at-tend*.

Present Indicative of *Sum*

The verb *to be* is irregular in English and Latin, as well as in other languages.

sum, <i>I am</i>	su'mus, <i>we are</i>
es, <i>you are</i>	es'tis, <i>you are</i>
est, <i>he, she, it is</i>	sunt, <i>they are</i>

122.

What Case?

Review 30, Caution. Give the Latin in the proper case for the underscored words:

1. They are sailors. 4. He is a slave.
2. We are settlers. 5. I teach my friend.
3. They move the prisoners. 6. You are boys.

English Word Formation

The prefix **in-** is often assimilated. Define the following, formed from words found in recent vocabularies: *in-gratiate*, *in-habit*, *im-migrant*, *im-port*, *in-spect*, *in-undate*. Additional examples of assimilation of **in-** are: *im-bibe*, *il-lusion*. Words that have come in through the French often have **en-** or **em-** for **in-** or **im-**: *enchant*, *inquire* or *enquire*.

129. Second Declension: Neuter Nouns and Adjectives in -um

The second declension contains, in addition to the masculine nouns ending in -us, -er, and -r, a large group of neuter nouns ending in -um. The only difference between them and the -us nouns is in the nominative and accusative, singular and plural.

CASE ENDINGS		sig'num par'vum, a small sign (base, sign- parv-)			
	SINGULAR	PLURAL	SINGULAR		PLURAL

Acc.	-um	-a	sig'num	par'vum	sig'na par'va
Abl.	-ō	-īs	sig'nō	par'vō	sig'nīs par'vīs

Note. — (a) Neuter nouns and adjectives of all declensions have the same form in the accusative singular as in the nominative.

(b) Neuter nouns and adjectives of all declensions end in **-ā** in the nominative and accusative plural.

(c) Neuter nouns (not adjectives) of the second declension ending in **-ium** contract **-iī** to **-ī** in the genitive singular: **cōnsi'liī** becomes **cōnsi'li**. The accent is not changed. The **-i-**, being a part of the base, appears in every form: (dat.) **cōnsiliō**, etc.

130. Drill. — (a) Decline **frūmentum bonum** and **praemium grātum**.

(b) Give in Latin:

- (1) *a new standard* in the accusative, singular and plural.
- (2) *a famous reward* in the ablative, singular and plural.
- (3) *a great plan* in the genitive, singular and plural.
- (4) *a small camp* in the dative.

135. Imperfect and Future Indicative of *Sum*

Review the present tense of the verb *sum* (121).
The imperfect and future tenses of *sum* are likewise
irregularly formed:

IMPERFECT

e'ram, *I was*

e'rās, *you were*

e'rat, *he, she, it was*

erā'mus, *we were*

erā'tis, *you were*

e'rant, *they were*

FUTURE

e'rō, *I shall be*

e'ris, *you will be*

e'rit, *he, she, it will be*

e'rimus, *we shall be*

e'ritis, *you will be*

e'runt, *they will be*

Caution. — Do not say *You was*.

136. Infinitive Used as Subject

FIG. 44. ROMAN GONG

In English, a verb preceded by *to* (as *to see*, *to hear*, etc.) is called an *infinitive*. The English infinitive sign, therefore, is *to*.¹ The corresponding sign of the present active infinitive in Latin is *-re*, which is added directly to the present stem; as *portā-re*, *to carry*; *vidē-re*, *to see*.

(a) The infinitive is a verbal noun, and as such it may be used as the subject of a verb; as,

Habēre amicōs est grātum, *To have friends is pleasing*.

(Cf. **Errāre hūmānum est**, *To err is human*.)

Note. — While Latin nouns are declined and represent different genders, the infinitive when used as subject is indeclinable and is always *neuter* (see **grātum** in the example above).

(b) An infinitive may be used as a predicate nominative; as, **Vidēre est crēdere**, *To see is to believe*.

137. Infinitive Used as Object

With many verbs the infinitive may be used as direct object, like other nouns; as,

¹ The preposition *to* introducing the infinitive is omitted, however, after the verbs *bid*, *dare*, *feel*, *hear*, *let*, *make*, *need*, *see*, and the auxiliary verbs *can*, *may*, *must*, *shall*, and *will*.

Parat cōpiās movēre, *He prepares to move the troops.*

Note. — This is sometimes called the **complementary infinitive**, because it *completes* the meaning of the main verb.

138.

143. Declension and Agreement of Adjectives and Nouns

We have noted (16) that an adjective in Latin must agree with its noun in gender, number, and case. This agreement is indicated by endings. In order, therefore, to modify nouns of different genders, every adjective thus far studied has a threefold declension as follows:

SINGULAR			PLURAL		
M.	F.	N.	M.	F.	N.
<i>Nom.</i> mag'nus	mag'na	mag'num	mag'nī	mag'nae	mag'na
<i>Gen.</i> mag'nī	mag'nae	mag'nī	magnō'-	magnā'-	magnō'-
			rum	rum	rum
<i>Dat.</i> mag'nō	mag'nae	mag'nō	mag'nīs	mag'nīs	mag'nīs
<i>Acc.</i> mag'num	mag'nam	mag'num	mag'nōs	mag'nās	mag'na
<i>Abl.</i> mag'nō	mag'nā	mag'nō	mag'nīs	mag'nīs	mag'nīs

144. Drill. — (a) Decline in full **liber, libera, liberum** and **novus, nova, novum**.

(b) Decline the adjective **sacer, sacra, sacrum** in turn with **nūntius, via, and bellum**.

(c) Give the vocative of **servus, nūntius, captivus**.

145. A Study in Agreement

Inasmuch as **nauta** is masculine and belongs to the first declension, an adjective, when made to agree with it in gender, number, and case, must assume the masculine endings of the second declension, as follows: **nauta bonus, nautae bonī**, etc. Decline in full. Similarly **agricola**.

146. Drill. — Decline together *a bad boy, pleasing harmony, and public aid*.

147. Review of Verbs

(1) Give the present stems of the following verbs: **habitō, terreō, vocō, moveō, dēbeō, mātūrō, augeō**.

(2) Conjugate in full, with meanings, (a) **migrō** in the present, (b) **maneō** in the imperfect, (c) **doceō** in the future.

(3) Give in Latin: *they were, he will be, I am, you (sing.) are, move! she is, you (plur.) were, we shall be, I was, fight! they are.*

148.

Rapid-Fire Drills

(1) *Translate*: we were; **habēbis**; **māteriā**; **probāmus**; from the small waves; **manent**; she did intrust; of our gratitude; **tuōs amīcōs**; you were laying waste.

(2) What forms are: **tenent**, **soci**, **amābāmus**, **amīce**, **vigiliīs**, **nūntiī**, **nūntiābimus**, **docēbitis**, **mōnstrās**, **auxiliōrum**, **nūntī**?

149. Blackboard Drill (*To the Teacher*).—Select fifteen or twenty nouns of the first and second declensions in various cases, singular and plural, place them on the board without reference to order of cases, and exhaust the possibilities of case and meaning. This will afford an excellent drill for the rapid recognition of forms.

English Word Studies — Review

(1) Give and define three English nouns which retain Latin nominative forms, singular and plural, of the first declension.

(2) Give and define three English words which preserve Latin verb forms.

(3) Give and define three English nouns which retain Latin nominative forms, singular and plural, of the second declension, masculine.

(4) Give and define three English nouns which retain Latin nominative forms, singular and plural, of the second declension, neuter.

(5) Give prefix and root word from which the following are derived, and define:

defame, approve, advocate, invocation, immigrant, emigrant, avocation, vocation, deter.

(6) What is the original form of the prefix in the following?

LESSON XXI

LATIN QUESTIONS

151.

Questions

In Latin a question is regularly introduced by an interrogative word — either a pronoun (**quis**, *who?* **quid**, *what?*) or adverb (**ubi**, *where?* etc.), or the particle **-ne**. The latter is therefore a kind of question mark at the beginning of a sentence and cannot be translated. It is never used alone but is always attached to the first word in the sentence. Such attached words are called **enclitics**. As the enclitic becomes part of the preceding word, the word accent may shift: **īnsulam'ne Corsi'cane**.

When **nōn** is used in a question, it is put first and the enclitic **-ne** is attached to it.

pō'nō, pō'nere, <i>put, place</i>	(postpone)
sem'per, adv., <i>always</i>	(sempiternal)

155. Third Conjugation

(a) Verbs of the **third conjugation** have the stem vowel **-ē-**. Note the difference of stem vowel in:

- 1st Conj. (*Long-A Verbs*): Pres. stem **parā-** (from infin. **parāre**)
 2nd Conj. (*Long-E Verbs*): Pres. stem **vidē-** (from infin. **vidēre**)
 3rd Conj. (*Short-E Verbs*): Pres. stem **pōnē-** (from infin. **pōnēre**)

(b) The short vowel **-e-** of the third conjugation changes to **-i-** in forming the present tense, except in the third person plural, where it becomes **-u-**. In the first person singular it disappears before **-ō-**. Short **-e-** is lengthened in the imperfect tense.

PRESENT (<i>I place, etc.</i>)		IMPERFECT (<i>I was placing, etc.</i>)	
pō'nō	pō'nimus	pōnē'bam	pōnēbā'mus
pō'nis	pō'nitis	pōnē'bās	pōnēbā'tis

156. Plural Imperative in -īte. The short stem vowel -e- in third conjugation verbs changes to short -i- before -te in forming the plural imperative: sing., **accēde**; plur., **accēdite**, *approach*.

157. Drill. — (a) Memorize the model verb **pōnō** and conjugate **agō**, **dēfendō**, and **cēdō** in the present and imperfect tenses indicative.

(b) Form the present imperative, singular and plural, of the above verbs, and of **vocō** and **videō**.

159. English Word Studies

We have seen that many English nouns have preserved their original Latin forms. A great many more have preserved the base of the Latin noun. Others again consist of the Latin base plus silent -e. Some adjectives also preserve the Latin base or the base plus -e. The following are examples:

base: *form, public, sign*; base plus **-e**: *cause, fortune, fame, cure, plane*.

The same rule is illustrated in the following words, which have undergone changes in the base:

base: *letter (littera), number (numerus), car (carrus), clear (clārus)*; base plus **-e**: *single (singuli)*.

Give other examples of this rule from nouns and adjectives already studied.

po'pulus, -ī, m., <i>people</i>	(popular)
re'gō, re'gere, <i>guide, rule</i>	(regent)

162. English Word Study

Many English verbs preserve the Latin base with or without silent **-e**: (a) *cede, probe, accuse, evoke*; (b) *defend, labor*.

Give other examples of this rule from verbs that you have studied.

163. Apposition

1. *Multi viri, amici captivōrum, in castris sunt, Many men, friends of the prisoners, are in the camp.*

2. *Nautis, amicis nostris, pecūniam dōnāmus, We give money to the sailors, our friends.*

Observe that **amici** (1) describes the subject **virī** and stands in direct relation to it and is therefore in the nominative, while **amicis** (2) limits or refers directly to **nautis**, the indirect object, and is accordingly in the dative. No verb intervenes. This construction is called **apposition**.

169. Latin and English Word Formation: Vowel Changes

When a Latin word is compounded with a prefix, short -a- or short -e- in the root is usually "weakened" to short -i- before a single consonant except -r-. The English derivatives show the same change. Long vowels are not affected; for example:

From agō, Latin ex-igō, ab-igō, red-igō, etc.; English *exigency*, etc.

From capiō, Latin ac-cipiō, in-cipiō, etc.; English *incipient*, *recipe*, etc.

From faciō, Latin ef-ficiō, dē-ficiō, etc.; English *efficient*, *deficient*, etc.

From habeō, Latin pro-hibeō, ex-hibeō, etc.; English *prohibit*, *exhibit*, etc.

From teneō, Latin con-tineō, re-tineō, etc.; English *continent*, *retinue*, etc.

Exercise. — Illustrate the rule further with English derivatives of the Latin verbs which you have studied.

170. Third Conjugation Verbs in *-iō*: Present and Imperfect Indicative Active

A small but important group of verbs of the third conjugation ends in *-iō* instead of *-ō*. While their present stems end in *-ĕ*, *-i-* is inserted before the lengthened stem vowel in forming the imperfect and future tenses, as well as in the first person singular and the third person plural of the present tense. Compare the following model of an *-iō* verb with **pōnō** (155, *b*):

PRESENT (*I take*, etc.)

ca'piō	ca'pimus
ca'pis	ca'pitis
ca'pit	ca'piunt

IMPERFECT (*I was taking*, etc.)

capiē'bam	capiēbā'mus
capiē'bās	capiēbā'tis
capiē'bat	capiē'bant

171. Fourth Conjugation

Most verbs ending in *-iō*, however, belong to the **fourth conjugation** and are distinguished by the stem vowel *-ī-*.

Verbs of the fourth conjugation are called **Long-I Verbs**, because they retain long *-ī-* throughout their conjugation except where long vowels are regularly shortened (23, *a*). Note by contrast that *-iō* verbs of the third conjugation have short *-i-* throughout.

PRESENT (*I fortify*, etc.)

mū'niō	mūnī'mus
mū'nīs	mūnī'tis
mū'nit	mū'niunt

IMPERFECT (*I was fortifying*, etc.)

mūniē'bam	mūniēbā'mus
mūniē'bās	mūniēbā'tis
mūniē'bat	mūniē'bant

172. Drill. — Conjugate and give all possible meanings of the present and imperfect tenses of *accēdō*, *inveniō*, *faciō*.

ad infinitum, *to infinity, i.e. without limit.*
 ad astra per aspera, *to the stars through difficulties.*
 ex animō, *from the heart (sincerely).*
 Experientia docet, *Experience teaches.*

177. Word Order

We have observed from the beginning (9) that the words in a Latin sentence show their connection with one another by means of endings, regardless of position (unlike English). They may therefore be shifted rather freely without obscuring the relationship. The normal order is:

SUBJECT
NOUN — adjective (<i>genitive, appositive</i>)
PREDICATE
ablative — indir. obj. — dir. obj. — adverb — VERB

(a) **Remember**, therefore, that the normal order of words is as follows:

¹ When used in this original sense, *locus* changes gender in the plural.

1. Adjectives usually follow their nouns, but adjectives of quantity precede: **virī bonī; multī virī.**

2. Possessive adjectives (**meus, tuus**, etc.) follow their nouns, unless emphatic.

3. A genitive follows its noun.

4. An indirect object stands before a direct object.

5. A word used to ask a question usually stands first, as in English.

6. The verb stands last. Forms of the linking verb are often placed in the middle of a sentence, as in English.

7. For **nōne**, see 151.

(b) But this normal order is far less regular in Latin than the normal order is in English. The shifted order serves to bring out varying shades of emphasis. This is done also in English, though to a less extent, largely in imitation of the Latin. Emphasis is gained particularly by:

1. Putting the emphatic word *first* in the sentence.

2. *Separating* the emphatic word from the word to which it belongs.

The former is common in English: *Great is the glory of the Lord!*

178.

182. Third Conjugation: Future Active

The future sign of verbs of the first and second conjugations is **-bi-** (51). The future sign of verbs of the third and fourth conjugations, however, is **-ē-**. The **-ō** verbs of the third conjugation, in forming the future, substitute **-ē-** for the stem vowel **-ē-**, except in the first singular (**-am**).¹

pō'nam, *I shall place*
 pō'nēs, *you will place*
 pō'net, *he will place*

pōnē'mus, *we shall place*
 pōnē'tis, *you will place*
 pō'nent, *they will place*

¹ The third singular and plural have **-ē-**, according to rule (23, a).

183. Drill. — Give the present of *mittō*, the imperfect of *cēdō*, and the future of *dūcō*, *dēfendō*, and *agō*.

184. Exercises

“Quid¹ agēmus? In agrīs labōrāmus sed frūmentum nōn habēmus. Deī nōn aequī sunt; officium nōn faciunt. Vītā nostram servāre dēbent.”

The emperor Hadrian (117-138 A.D.) built a magnificent summer home, or rather a fair-sized town, near Rome. The wall here shown furnished a shady walk morning and afternoon, on the one side or the other.

187. Latin and English Word Formation

The preposition **cum** is often used as a prefix in Latin and English but always in the assimilated forms **com-**, **con-**, **col-**, **cor-**, **co-**. It usually means *together* rather than *with*.

Define the following words, all formed from verbs which you have studied: *convoke*, *collaborate*, *commotion*, *convene*.

Give some other English words formed by attaching this prefix to Latin verbs, nouns, or adjectives already studied.

188. Formation of Adverbs

In English, adverbs are commonly formed from adjectives by adding the suffix *-ly*: adj., *clear*; adv., *clearly*.

In Latin, adverbs are likewise formed from adjectives. As a rule, adverbs are formed from adjectives of the first and second declensions by adding *-ē* to the base: adj., **clārus**; adv., **clārē**; adj., **liber**; adv., **liberē**.

189. Drill. — Form adverbs from **pūblicus**, **grātus**, **commodus**, and **aequus**.

190. Ablative of Accompaniment

The means or instrument *with which* something is done is expressed by the ablative without a preposition (66): *They fought with arms*, **Armīs pugnābant**. When, however, *with* means *together with* or *along with*, the preposition **cum** with the ablative is used. This expresses **accompaniment**: **Cum servō venit**, *He is coming with the slave*.

Caution. — When tempted to use **cum** (*with*), be sure that *with* means accompaniment or association. In the following English sentences determine when **cum** should be used and when it should be omitted:

(a) *Anna is with the sailor.*

(b) *Soldiers fight with weapons; generals fight with armies; both soldiers and generals fight with their enemies.*

FOURTH CONJUGATION: FUTURE INDICATIVE ACTIVE. FUTURE OF *-IŌ* VERBS OF THE THIRD CONJUGATION

193.

Vocabulary

<i>au'diō, audī're, hear</i>	(auditory)
<i>conti'neō, continē're, hold together, detain, contain</i>	[<i>teneō</i>]

194. Future Active of Fourth Conjugation and Third Conjugation *-iō* Verbs

Verbs of the fourth conjugation form the future by adding *-ē-* directly to the present stem (long *-ī-* of the stem is shortened, however, since it precedes another vowel). Verbs of the third conjugation ending in *-iō* resemble fourth conjugation verbs in the future tense, owing to the insertion of *-i-* (170):

I shall fortify, etc.

<i>mū'niam</i>	<i>mūniē'mus</i>
<i>mū'niēs</i>	<i>mūniē'tis</i>
<i>mū'niet</i>	<i>mū'nient</i>

I shall take, etc.

The boys will not receive the reward, because they are late. 5. The late boys and girls will not hear the words of the famous man.

197. Latin and English Word Formation

Most prefixes are prepositions, but a few are not. **Re-** is used only as a prefix in Latin and English; it means *back* or *again*. It sometimes has the form **red-**, especially before vowels. Examples: *retineō*, *hold back*; *reficiō*, *make again*; *redigō*, *drive back*.

In English, **re-** is freely used with all sorts of words: *reduce*, *revisit*, *rehash*, *refill*.

Exercise. — Give other examples of the prefix **re-** in Latin and English words.

English Word Study

A friend is a person whom you know well, love dearly, and treat familiarly. How many English words can you call friends, according to this definition? If you will trace English words back to their Latin roots, you will gain many new friends. For example: A "sentence" in grammar is a single, complete *opinion* or expression.

A judicial "sentence" is a judge's *opinion*. A "convention" *comes together* in an "auditorium" to *hear* the speaker. A "mediator" settles disputes by taking a *middle* position. A spiritualistic "medium" is supposed to take a *middle* position between the unseen spirit and the "audience" who *hear*. A "studious" person is one who is *eager* to learn. An "alarm" is a call *to arms* (**ad arma**). To "repatriate" a person is to bring him *back* to his *fatherland*. Learn to look carefully at the *make-up* of every strange English word and you will often detect an old Latin friend *in disguise*.

201.

Idioms

Every language contains set phrases or fixed expressions with meanings which cannot be translated literally. For example, we say, *How are you?* when we really mean, *How do you feel?*

FIG. 58. CAST OF A DOG AT POMPEII

Pompeii was buried by a shower of ashes from Vesuvius (cf. Fig. 46). This dog, as well as a number of human beings, was suffocated by them. As the body decayed, the ashes formed a perfect mold which the excavators filled with plaster.

Certain set phrases occur in Latin which are peculiar to it and cannot be translated literally into English. These fixed expressions are said to be **idiomatic**. The following should be memorized and entered in the notebook under the general heading "Idioms":

1. **grātiās agere**, to thank, with dat. (literally, to act gratitude)
2. **grātiām habēre**, to feel grateful, with dat. (lit., to have gratitude)
3. **vītam agere**, to live a life (lit., to act life)
4. **bellum gerere**, to wage or carry on war
5. **castra pōnere**, to pitch camp (lit., to place camp)
6. **castra movēre**, to break camp (lit., to move camp)
7. **viam mūnīre**, to build a road (lit., to fortify a road; roads were built like walls)
8. **verba facere**, to speak, make a speech (lit., to make words)
9. **memoriā tenēre**, to remember (lit., to hold in memory)
10. **cōsiliū capere**, to adopt a plan (lit., to take a plan)

LESSON XXX

SUBSTANTIVES. STORY OF LUCIUS

212. Substantives

When any part of speech, other than a noun or pronoun, is used like a noun or pronoun, it is called a **substantive**. We have already noted the substantive use of the infinitive (136, 137). Likewise, an adjective may be used substantively; the masculine refers to persons, the neuter to things:

(a) **Nostri (virī) veniunt**, *Our (men) are coming*.

(b) **Multa audiēs**, *You will hear many (things)*.

213. Hints for Reading and Translating

The first step in translating Latin is to follow the order of words, separating them into groups according to their agreement. Such word groups or phrases should be read and translated as units, with proper attention to emphasis and expression.

After translating **Forum Rōmānum** with due regard to the word groups in each sentence, practice reading the entire passage aloud in the Latin with as much expression as you can.

216. GLIMPSES OF ROMAN LIFE

The City of Rome

According to tradition, Rome was founded in 753 B.C. The first settlement was on the Palatine Hill, named after Pales, the goddess of shepherds. This was natural because the first settlers were shepherds. As the

¹ that.² Sea.

city grew it spread to the nearby hills and the valleys between them. In the course of time it came to be known as the "City of the Seven Hills." These hills are neither high nor extensive. The Palatine is only 142 feet above the level of the Tiber River — about the height of a ten-story building.

Below the Palatine Hill was the valley which came to be known as the Forum. At first a marshy district, it became the market place of Rome, then its chief shopping and business district, and finally the civic center. In its final development it was a rectangular paved space surrounded by temples, law courts, senate house, and other public buildings. At one end was a speakers' platform called the *rostra* because it was

FIG. 64. FORUM RŌMĀNUM

Thus it appeared during the Roman Empire. The view is toward the west. In the left background, the temple of Jupiter on the Capitoline Hill.

ornamented with the beaks of ships (**rōstra**) captured in a war fought in the fourth century B.C.

The Palatine, because of its nearness to the Forum, became the residence district for the statesmen and wealthy people of the city. Hence it was natural that the first emperors had their homes there. Eventually the whole imperial administration was centered on this hill, and the emperor's buildings covered it completely. So the hill which was named after the patron goddess of the shepherds who built their rude huts there came to be the site of magnificent buildings. Thus it happens that our word *palace* is derived from the name of the hill.

Another hill near the Forum, the Capitoline, got its name from the famous temple of Jupiter known as the Capitolium, because it was the "head" (**caput**), or chief temple of that god. From it the Capitol at Washington gets its name, as well as the Capitols of the various states. The hill also had on it a fort and the temple of Juno Moneta. In connection with this a mint for coining money was later established, and thus from the word **monēta** we get our words *money* and *mint*.

The streets of Rome were narrow and crooked. In the early days they were unpaved. Only during the last part of the first century B.C. (99-1) did Rome begin to become beautiful.

In the early days the people of Rome got their water from wells, springs, and the Tiber River, which winds its way along one side of the city in the shape of the letter S. In 312 B.C. Appius Claudius built the first aqueduct, which brought pure water from a distance.

There were many street fountains, and eventually many houses were piped for running water.

For better administration the emperor Augustus divided the city into fourteen regions, or wards. One feature of this arrangement was the reorganization and extension of the police and fire department (*vigilēs, watchmen*). Previously fire protection had been so poor that private fire companies were organized. These bought up burning houses at bargain prices and then proceeded to extinguish the fire.

In early days a wall known as the Servian wall was built around the city. But Rome soon outgrew this. In the third century A.D. the wall of Aurelian was built.

At its height, Rome had a population of more than a million. The modern city has been growing rapidly in recent years, but has not yet reached this figure. The latest official estimate (1928) puts it at 867,000.

Rome has been one of the most important cities of the world for a longer time than any other. For hundreds of years it was the capital of the great Roman Empire, then it continued its importance as the seat of the papacy, and in recent generations it has become also the capital of one of the powerful nations of Europe. Even in ancient times it received the name of the "Eternal City" (*urbs aeterna*), and it seems that this name has been justified.

218. English and Latin Word Formation

We have seen how Latin and English words are formed from others by the use of prefixes. There are other ways of forming new words. These we shall discuss later. For the present it is sufficient to recognize the roots that words have in common. Note the relationship and review the meanings of the following words which have occurred in the preceding vocabularies:

(a) *amicus* and *amīcitia*, (b) *nāvigō* and *nauta*, (c) *nūntiō* and *nūntius*, (d) *capiō* and *captivus* (a "captive" is one who is *taken*), (e) *pugna* and *pugnō*, (f) *puer* and *puella*, (g) *habeō* and *habitō* (to "inhabit" a place is to keep on *having* it).

From now on try to associate new Latin words with those you have already had, as well as with English derivatives which you find.

219. Voice: Active and Passive (*Study 628.*)

1. **Vir accūsābit**, *The man will accuse.*
2. **Vir accūsābitur**, *The man will be accused.*

Observe (a) that in 1 the verb shows that the subject *acts* (**active voice**), and in 2 that it is *acted upon* (**passive voice**); (b) that voice is indicated in Latin by endings.

Note. — The linking verb **sum** has no voice, for it merely indicates existence.

220. Progressive and Passive Verb Forms Distinguished in English (*Study 627, 631.*)

Be careful to distinguish between active progressive forms and true passive verb phrases, both of which employ the verb *to be*.

ACTIVE (progressive): The present participle combined with any tense of the verb *to be* is active: *He is seeing* (**videt**); *They were calling* (**vocābant**).

PASSIVE: The past participle combined with any tense of the verb *to be* is passive: *He is seen* (**vidētur**); *They were called* (**vocābantur**).

- Summary:** 1. *to be* + present participle = active
 2. *to be* + past participle = passive

221. Passive Voice of the Four Conjugations in Present System

The passive personal endings, which are substituted for the active,¹ are:

¹ But in forms ending in **-ō** in the active (as **parō** and **parābō**), the passive ending **-r** is *added to*, not *substituted for*, the active ending. The **-ō** becomes short.

Ablative of Personal Agent

1. Amāmur ab amicīs, *We are loved by our friends.*
2. Vir ā puerō vidētur, *The man is seen by the boy.*

228. Rule. — *The ablative preceded by ā or ab is used with a passive verb to denote the person by whom anything is done.*

Caution. — The ablative of personal agent must be carefully distinguished from the ablative of means, both of which are frequently translated with *by*. Remember that "*means*" refers to things, while "*agent*" always denotes a person. Furthermore, the ablative of means never takes a preposition, while the ablative of personal agent is never used without the preposition ā (**ab**). This preposition means *by* only when used with a personal agent.

1. *Oppidum cōsiliō capitur*, *The town is taken by strategy* (means).

2. *Oppidum ā nostrīs capitur*, *The town is taken by our men* (agent).

229. Agreement. — In both English and Latin, when two singular subjects are connected by *or* (**aut**), *either . . . or* (**aut . . . aut**), *neither . . . nor* (**neque . . . neque**), the verb is in the singular: *Neither the boy nor the girl is in the forest*, **Neque puer neque puella in silvā est.**

230. Drill. — Turn back to page 112 (196) and put into the passive *Oral* 3, 5, 6, 7.

FIG. 71. SATYRS AS ROPEWALKERS

A satyr was a mythological being, half man, half goat. The central figure plays a flute; the one on the right, a lyre. An ancient wall painting.

234. Latin and English Word Formation

As a prefix **prō-** has its prepositional meanings, with the additional one of *forward*. Define the following derivatives of words which you have already studied:

provoke, prospect, produce, proceed.

Latin Phrases in English

prō patriā, *for (one's) country.*

prō bonō pūblicō, *for the public good.*

prō fōrmā, *for (as a matter of) form.*

235. The Perfect Stem

In English, the **perfect** tense is formed by use of the auxiliary *have* (*has*) with the past participle: *I have prepared, he has gone*.

In Latin, the **perfect stem** is used in forming the three perfect tenses in the active — the **perfect**, **past perfect**, and **future perfect**. The perfect stem is found by dropping the personal ending *-ī* from the perfect active indicative: *āmīsī, āmīs-*.

Note. — All verbs of the first conjugation thus far studied form the perfect stem by adding *-v* to the present stem: *properā-, properāv-*. No rules, however, can be given for forming the perfect stem of verbs of the other conjugations. Hereafter the first person singular of the perfect active indicative will be given in the vocabularies as the third form. This should be memorized.

236. Perfect Active Indicative

The following endings (used in no other tenses) are added directly to the perfect stem in forming the **perfect indicative active**:

PERFECT ENDINGS	FIRST CONJUGATION	SECOND CONJUGATION
<i>-ī</i>	<i>parā'vī, I prepared, I have prepared</i>	<i>ha'buī, I had, I have had</i>
<i>-isti</i>	<i>parāvis'tī, you prepared, etc.</i>	<i>habuis'tī, you had, etc.</i>
<i>-it</i>	<i>parā'vit, he prepared, etc.</i>	<i>ha'buit, he had, etc.</i>
<i>-imus</i>	<i>parā'vimus, we prepared, etc.</i>	<i>habu'imus, we had, etc.</i>
<i>-istis</i>	<i>parāvis'tis, you prepared, etc.</i>	<i>habuis'tis, you had, etc.</i>
<i>-erunt</i>	<i>parāvē'runt, they prepared, etc.</i>	<i>habuē'runt, they had, etc.</i>

Similarly *posuī, cēpī, mūnīvī* (see 657, 659, 658).

237. Drill. — Conjugate the following in the perfect indicative active:

convocō (convocāv-), agō (ēg-), excēdō (excess-), dēfendō (dēfend-), mittō (mīs-), trahō (trāx-), accipiō (accēp-), videō (vid-), fugiō (fūg-), veniō (vēn-).

LESSON XXXIV

PERFECT INDICATIVE OF SUM. THE USE OF THE IMPERFECT AND THE PERFECT

240. Vocabulary

com'parō, comparā're, comparā'vī, <i>get together, prepare</i>	[parō]
fī'lius, fī'lī, m., <i>son</i>	[filia]
nōs'cō, nōs'cere, nō'vī, <i>learn</i> ; in perf. tenses, "have learned" = <i>know</i>	
prōcē'dō, prōcē'dere, prōces'sī, <i>go forth, advance</i>	[cēdō]
sum, es'se, fu'ī, <i>be</i>	(essence)
ab'sum, abes'se, ā'fuī, <i>be away from, be absent</i>	

241. Perfect Indicative of Sum

The verb **sum** is conjugated regularly in the perfect:

fu'ī, <i>I have been, I was</i>	fu'imus, <i>we have been, we were</i>
fuis'tī, <i>you have been, you were</i>	fuis'tis, <i>you have been, you were</i>
fu'it, <i>he has been, he was</i>	fuē'runt, <i>they have been, they were</i>

242. How the Perfect and the Imperfect Differ in Latin (*Study 626, b, d.*)

The perfect tense represents an act (a) as *now complete*, like the English present perfect, expressed by *has* and *have*: **vīdī**, *I have seen*; (b) as a *simple act* performed *once*, like the English past: **vīdī**, *I saw*. The latter use of the Latin perfect is to be carefully distinguished from the imperfect, which always denotes a state of being or an act as *repeated, customary, or continuous*, like the English progressive past:

Perfect: **vīdī**, *I saw (once).*

Imperfect: **vidēbam**, *I kept seeing (all along), I was seeing.*

The perfect tense is used more commonly in Latin than the imperfect.

243.

Exercises

Oral. 1. Multī puerī aberant. Nōne valēbant? 2. Aquam portābam et reliquī puerī in magnō agrō castra pōnēbant. 3. Paucī (of us) labōrābāmus, sed reliquī puerī in castrīs semper manēbant. 4. Agricolārum filiī et filiae multa dē agrīs et equīs nōvērunt. 5. Magistrī filius multa dē librīs nōvit, sed agrī filium agricolae docent. 6. Multī virī servī fuērunt; nunc liberī sunt. 7. Prō patriā ad pugnam prōcessērunt; prō patriā et arma et frūmentum comparāvērunt; prō patriā labōrāvērunt et pecūniam dōnāvērunt.

Written. 1. We are the sons of free (men) and love our native land. 2. We know much about many lands and peoples. 3. Much grain is being prepared by the farmers in the provinces. 4. We hastened from the town into the fields and learned many (things). 5. The farmer has spent many years in the fields.

244. Latin and English Word Formation

We have already studied the preposition **in** used as a prefix (126). There is another prefix **in-**, used chiefly with adjectives and nouns, which has an entirely different meaning and must be carefully distinguished from the former. It is a negative prefix (like "un-"), as in *injustice*. It is assimilated like the other prefix **in-**, e.g. *il-legal*, *im-moral*, *ir-regular*. Define the following derivatives of words which you have studied:

immemorial, *immaterial*, *inglorious*, *ingratitude*, *illiberal*, *illiterate*, *infirm*.

The prefix **dis-** in English and Latin means *apart*, but sometimes it is purely negative like **in-**. Distinguish carefully from **dē-**. It is either assimilated or left unchanged, as follows:

dis-inter, dis-locate, dis-arm, dif-fuse, di-vert, di-stant, dis-similar.

Define the first three of these words, derived from words in previous vocabularies.

PAST PERFECT AND FUTURE PERFECT INDICATIVE ACTIVE OF THE FOUR CONJUGATIONS

246.

Vocabulary

dimit'tō, dimit'tere, dīmī'sī, <i>let go, send away</i>	[mittō]
inimī'cus, -a, -um, <i>unfriendly, hostile; as a noun, enemy</i>	[amicus]
in'teger, -gra, -grum, <i>untouched, fresh</i>	(integer)
por'ta, -ae, f., <i>gate</i>	(portal)
prōdū'cō, prōdū'cere, prōdū'xī, <i>lead forth or out</i>	[ducō]
reti'neō, retinē're, reti'nuī, <i>hold back, restrain, keep</i>	[teneō]

247. Past Perfect Indicative Active (*Study 626, e.*)

In English, the **past perfect** tense is formed by use of the auxiliary *had* with the past participle: *I had prepared, they had prepared.*

In Latin, the **past perfect** (sometimes called pluperfect) is formed by adding the tense sign **-erā-** to the perfect stem, together with the personal endings used throughout the present system. It is equivalent in form to the various forms of the imperfect tense of **sum** added to the perfect stem of the given verb:

parā'veram, <i>I had prepared</i>	parāverā'mus, <i>we had prepared</i>
parā'verās, <i>you had prepared</i>	parāverā'tis, <i>you had prepared</i>
parā'verat, <i>he, she, it had prepared</i>	parā'verant, <i>they had prepared</i>

Similarly habueram, posueram, cēperam, mūniveram.

(For full conjugation see 656, 657, 659, 658.)

248. Future Perfect Indicative Active (*Study 626, f.*)

In English, the **future perfect** tense is formed by use of the auxiliary *shall have* with the past participle: *I shall have prepared*.

In Latin, the **future perfect** is formed by adding the tense sign **-eri-** to the perfect stem, together with the personal endings used throughout the present system. It is equivalent in form to the various forms of the future tense of **sum** (with the exception of **-erint** in the third plural) added to the perfect stem of the given verb:

parā'verō,¹ *I shall have prepared*

parā'veris, *you will have prepared*

parā'verit, *he, she, it will have prepared*

parāve'rimus, *we shall have prepared*

parāve'ritis, *you will have prepared*

parā'verint, *they will have prepared*

Similarly **habuerō, posuerō, cēperō, mūniverō.**

(For full conjugation see 656, 657, 659, 658.)

Note. — The three tenses, perfect, past perfect, and future perfect, which are based upon the perfect stem, form the **perfect system**.

249. Drill. — Conjugate the following in the perfect system active: **videō, -ēre, vidī; cēdō, -ere, cessī; efficiō, -ere, effēcī; moveō, -ēre, mōvī; incipiō, -ere, incēpī.**

¹ -i- disappears before final ō (23, a).

250.

Exercises

Oral. 1. Inimīcōs nostrōs amāre dēbēmus. 2. Parvī puerī linguam retinēre dēbent. 3. Magister puerōs dīmīsit, quod fōrmās verbōrum nōn nōverant. 4. Nostrī castra movēre et proelium committere parāverint. 5. Integrae cōpiāe nostrae bellum gerere incēpērunt et prō populīs liberīs pugnāvērunt. 6. Marius prō portīs castrōrum cōpiās prōdūxerat. 7. Virī ē castrīs vēnerant et ad oppidum barbarōrum tardē prōcēdēbant.

Written. 1. The slave deserved a large reward, because he had saved the life of our friend's son. 2. Marius had fought in Gaul for (his) native land. 3. We shall have seen strange lands, towns, and peoples. 4. We shall have sent the messenger to the province.

251. Latin and English Word Formation

We have seen that prefixes are so called because they are attached to the beginnings of words (111). Particles which are attached to the ends of words are called **suffixes** (*sub, under, after; fixus, attached*). Like the Latin prefixes, the Latin suffixes play a very important part in the formation of English words.

The suffix **-ia** usually has the form **-y** in English. Give the English forms of the following words found in the preceding vocabularies: **memoria, glōria, familia, iniūria**.

What must be the Latin words from which are derived *colony, luxury, perfidy*?

Some **-ia** nouns drop the **-ia** entirely in English (159): *concord, vigil, matter* (from **māteria**).

252.

Latīnus respondit:

“Sī Aenēās nōn erit inimīcus, tum nostra amīcitia erit perpetua.”

- 15 Tum Latīnus nūntiōs cum equīs integrīs et dōnīs commodīs ad castra Trōiāna dīmīsīt. Trōiānī amīcitiam concordiamque effēcerant — Aenēās et Latīnus nunc erant amīcī sociīque.

254. How Personal Pronouns Are Used

In English, personal pronouns are used to indicate the person of the verb: *I* am, *you* are. In Latin, as we have seen (23), personal endings perform this function. When, however, emphasis or sharp contrast in subjects is desired, the Latin employs the personal pronouns **ego** (*I*) and **tū** (*you*). **Is** and **ea** serve as the personal pronoun of the third person (*he* and *she*). The full declension of these will be given later. Memorize the declensions of **ego** and **tū**:²

FIG. 77. A SLEEPY CHILD

¹ The word *it* is used to translate **is** and **ea** when the noun referred to is masculine or feminine in Latin but neuter in English (8).

² When the preposition **cum** is used with the ablative forms of **ego** and **tū**, it is attached to them: **mēcum**, *with me*; **nōbiscum**, *with us*.

255. Possessive Adjectives

From the base of **ego** (**me-**), **nōs** (**nostr-**), **tū** (**tu-**), and **vōs** (**vestr-**), the possessive adjectives **meus**, **noster**, **tuus**, and **vester** are derived.

The possessive adjectives follow the noun except when emphatic.

Caution. — Never use the genitives **meī**, **tuī**, **nostrum**, and **vestrum** to show possession; use the corresponding possessive adjectives **meus**, **tuus**, **noster**, and **vester**.

Query. — What is the difference between **tuus** and **vester**?

265. Latin and English Word Formation

The Latin suffix *-ia* usually has the form *-y* in English, as we have seen (251). When it is preceded by *-t-*, the combination *-tia* as a general rule has the form *-ce* in English.

PERFECT AND PAST PERFECT PASSIVE OF THE FOUR CONJUGATIONS

267.

Vocabulary

ēgre'gius, -a, -um, *distinguished, excellent* (egregious)
exem'plum, -ī, n., *sample, example* (exemplary)
per, prep. with acc., *through*
prōpō'nō, **prōpō'nere**, **prōpo'suī**, **prōpo'situs**, *set forth, present* [pōnō]
rema'neō, **remanē're**, **remān'sī**, **remānsū'rus**,¹ *remain behind,*
remain [maneō]
sub, prep., *under, close to*; with acc. after verbs of motion;
with abl. after verbs of rest

268. Latin and English Word Formation

The preposition **sub**, used as a prefix in Latin and English, means *under, up from under*: **sus-tineō**, *to hold up*; **succēdō**, *to come up*. It is regularly assimilated before certain consonants: *sup-port, suc-ceed, sug-gest, sus-ceptible, suf-fer, sur-rogate, sus-tenance, sus-pend*, but *sub-mit, sub-trahend*. We use it freely in English to form new words: *sub-let, sub-lease*.

Per usually remains unchanged when used as a prefix.

269.

Perfect Participle

The perfect participle in Latin is passive and is declined like **magnus**, -a, -um. It agrees, like an ordinary adjective, with a noun or pronoun in gender, number, and case. The perfect participle of each new verb

¹ A few verbs lack the perfect participle; some of these have the future active participle in -ūrus, which appears as the fourth principal part.

will hereafter be given in the vocabularies as the fourth part. In the first conjugation it is regularly formed by adding **-tus** to the present stem: **parā-tus**.

270. Perfect System Passive

In English, all the passive tenses are compound, consisting of two or more parts.

In Latin, the tenses of the present and perfect systems thus far studied have been single or **simple** in form. The three perfect tenses in the passive, however, are **compound**, *i.e.* they are formed by combining the perfect participle of the given verb in turn with the present, imperfect, and future tenses of **sum** to form the perfect, past perfect, and future perfect tenses respectively.

271. Perfect Indicative Passive

In English, the present perfect passive is formed by using the perfect tense of *to be* (*i.e. have been*) as an auxiliary with the past participle.

In Latin, the perfect passive is formed by using the *present* tense of **sum** as an auxiliary with the perfect participle.

parā'tus (-a, -um)	{	sum, I was, have been prepared	parā'tī (-ae, -a)	{	su'mus, we were, have been prepared
		es, you were, have been prepared			es'tis, you were, have been prepared
		est, he was, has been prepared			sunt, they were, have been prepared
Similarly habitus sum, positus sum, captus sum, mūnitus sum. (For full conjugation see 656-659.)					

272. Past Perfect Indicative Passive

In English, the past perfect passive is formed by using the past perfect tense of *to be* (i.e. *had been*) as an auxiliary with the past participle.

In Latin, the past perfect passive is formed by using the *imperfect* tense of **sum** (i.e. **eram**) as an auxiliary with the perfect participle (cf. the formation of the corresponding active tense by adding the imperfect tense of **sum** to the perfect stem: **parāv-eram**):

parā'tus (-a, -um)	{	e'ram, <i>I had been prepared</i>	parā'tī (-ae, -a)	{	erā'mus, <i>we had been prepared</i>
		e'rās, <i>you had been prepared</i>			erā'tis, <i>you had been prepared</i>
		e'rat, <i>he had been prepared</i>			e'rant, <i>they had been prepared</i>

Similarly **habitus eram**, **positus eram**, **captus eram**, **mūnitus eram**.
 (For full conjugation see 656-659.)

Deō grātiās, *thanks to God.*

Deī grātiā, *by the grace of God* (seen on Canadian coins).

per annum, *by (through) the year.*

sic semper tyrannīs, *thus always to tyrants* (motto of the state of Virginia).

sub rosā, *under the rose*, i.e. in concealment.

278. Future Perfect Indicative Passive

In English, the future perfect passive is formed by using the future perfect tense of *to be* (i.e. *shall have been*) as an auxiliary with the past participle.

In Latin, the future perfect passive is formed by using the *future* tense of **sum** (i.e. **erō**) as an auxiliary with the perfect participle (cf. the formation of the corresponding active tense by adding the future of **sum** to the perfect stem: **parāv-erō**):

parā'tus (-a, -um)	{	e'rō, <i>I shall have been prepared</i>	parā'tī (-ae, -a)	{	e'rimus, <i>we shall have been prepared</i>
		e'ris, <i>you will have been prepared</i>			e'ritis, <i>you will have been prepared</i>
		e'rit, <i>he will have been prepared</i>			e'runt, <i>they will have been prepared</i>
Similarly habitus erō , positus erō , captus erō , mūnītus erō . (For the full conjugation see 656-659.)					

279. Drill. — Conjugate the following in the perfect system passive: **āmittō**, -ere, **āmīsī**, **āmissus**; **ēducō**, -ere, **ēdūxī**, **ēductus**; **suscipiō**, -ere, **suscēpī**, **susceptus**.

280. Present Infinitive Passive

In English, the present infinitive passive is formed by using the auxiliary *to be* with the past participle.

In Latin, the present infinitive passive is formed by changing the active infinitive ending *-re* to *-rī*:

Active: parā're, *to prepare;* habē're; mūnī're

Passive: parā'rī, *to be prepared;* habē'rī; mūnī'rī

Note. — In the third conjugation, final *-ēre* is changed to *-ī*:

Active: pō'nere, *to place;* ca'pere

Passive: pō'nī, *to be placed;* ca'pī

281. Drill. — Form the present passive infinitive of *videō*, *agō*, *trahō*, *suscipiō*, and *moveō*.

Superba verba rēgīnae Lātōna audīvit. Fīlium vocāvit et eum⁴ septem filiōs Niobae interficere iussit. Niobē septem filiōs nunc amiserat, tamen remānsit superba. Itaque Lātōna iussit etiam filiās septem ā

289. A Color Scheme for Learning Verb Forms

It has been seen that a Latin verb need never be blindly memorized, for it is conjugated regularly throughout by combining certain stems with tense signs and personal endings in a logical way, as may be shown by the following color scheme:

Use white chalk for the present stem and yellow for the perfect stem; light red for all tense signs, light green for personal endings. For the compound tenses of the perfect system passive, use blue for the past participle and white for the three tenses of **sum**.

LESSON XL

WORD SENSE. THE STORY OF LUCIUS

291. Hints for Developing "Word Sense"

No word in any language, except a few prepositions, etc., has the same meaning at all times. While words, as a rule, have one general meaning, they may have several *shades of meaning*, which depend entirely upon their context or surroundings. You have doubtless seen the chameleon, a lizardlike creature which, for protection, changes its color to suit that of the leaf or limb upon which it rests. This we call "imitative coloring." Words, like chameleons, take on a local color. In translating a Latin word, therefore, it is necessary to derive its exact meaning (as opposed to its general or "vocabulary" meaning) from its context or setting; for example,

AGERE

equōs	praedam	multum	grātiās	causam	cum virō
<i>drive</i>	<i>carry off</i>	<i>do</i>	<i>give</i>	<i>plead</i>	<i>deal</i>
horses	booty	much	thanks	a case	with a man

The above are only a few of the meanings of **agō**. From now on, do not confine yourself to the meanings given to words in the vocabulary, but select the one best suited to the context. In this way you will learn to express yourself in good English.

292. How to Study a Connected Passage

Do not turn to the vocabulary at the end of the book for a word you do not know. Read an entire paragraph before you look up a word. There are three ways to find the meaning of a word without looking it up:

1. *English derivatives* (nearly every Latin word has at least one English derivative).
2. *Related Latin words* (if you know the meaning of *re-* and *dūcō*, you know the meaning of *redūcō*).
3. *Sensible guessing*.

Use the vocabulary merely to verify results. In this way you will save time and gain a better command of Latin.

295. GLIMPSES OF ROMAN LIFE

Roman Schools

Even before going to school some Roman children learned the alphabet by playing with letters cut out of ivory, as ours do from their blocks. They started to school at about the same age as our children. The schools were quite different, however. They were very small private schools, usually run by slaves for small fees. Work began early in the morning. The children were taken to and from school by slaves called **paedagōgī**, a Greek word which means those who "lead (take) children." They did no teaching but merely kept their children in order. Our word pedagogue is derived from this word.

In the elementary school, called the *lūdus litterārum*, the three *R*'s formed the basis of the curriculum. For reading they had to depend at first on the Twelve Tables of the law. In the third century B.C. a school teacher translated the *Odyssey* from Greek for the use

of his pupils. Later other works of literature were used.

Writing was practiced on wax tablets, which were something like slates, except that the writing surface was a thin layer of wax on a wooden board. The writing was done by scratching the wax with a pointed

FIG. 88. WAX TABLET AND PAPYRUS ROLLS

Wax tablets, used for letters, accounts, etc., were of wood, covered with a thin layer of wax on which the letters were scratched with a bone or metal stylus. The rolls were used for books. Ink was used on them. (Photographed from models.)

stylus made of metal or bone. The other end of this was flat for erasing, or rather smoothing over the wax. They also wrote with pen and ink on papyrus, a kind of paper made out of thin strips of a reed which grew in Egypt. Most books were made out of rolls of this material. But it was expensive, and school children used only the backs of old books and loose sheets for their "scratch paper."

Arithmetic was complicated by the fact that the Romans did not have the Arabic system of numerals with its zero. Multiplication and division were impos-

sible. The Romans had two helps in their arithmetic: an elaborate system of finger counting and the abacus, or counting board, similar to those used as toys by children to-day and those which you may see in Chinese laundries.

More advanced education prepared boys for the one respected profession in ancient Rome, that of law and public life. Hence the secondary school, called the **schola grammaticī** (*school of the grammarian*), specialized in language, composition, rhetoric, and public speaking. But the course was also a broadly cultural one and included literature, both Greek and Latin. Most educated Romans learned to speak and write Greek fluently.

The college course in the **schola rhētoricī** (*school of the rhetorician*) was still more technical in preparation for a career in which public speaking, whether in a law court or a legislative body, played a very important rôle. For graduate work students could go to such university centers as Athens or Rhodes and listen to lectures by leading philosophers and rhetoricians.

Mt. Vesuvius is in the distance.

¹ **Dō** is irregular in three parts — perfect **dedī**, and **ā** in **dare** and **datus**. The **a** is short in all indicative forms except the present tense, second person singular.

297. Latin and English Word Formation

As a prefix in Latin and English, **inter-** has its usual meanings. It is rarely assimilated. It is used rather freely in English to form new words: *inter-class*, *inter-state*, *inter-scholastic*, etc.

As a prefix **ob-** has the meaning *towards* or *against*. It is regularly assimilated before certain consonants: *oc-cur*, *of-ficial*, *o-mission*, *op-ponent*; but *ob-tain*, *ob-serve*, *ob-durate*, *ob-vious*.

298. Principal Parts

(a) In English, every verb has three parts which, from their importance in forming the tenses, are called **principal parts**. Verbs that form the past tense by adding **-ed** to the present are said to be *regular*, while those which form the past tense in other ways — chiefly by changing the root vowel of the present — are said to be *irregular*. Note the following examples:

	PRESENT	PAST	PAST PARTICIPLE
Regular:	call	called	called
Irregular:	be	was	been
	see	saw	seen
	do	did	done
	sing	sang	sung

Query. — Can you give the principal parts of *drink*, *write*, *go*, *come*, *run*, *give*, *sit*, *set*, *lie*, *lay*?

(b) In Latin, every verb regularly has four principal parts. They will hereafter be printed in the vocabularies and should be memorized. The principal parts of the model verbs of the four conjugations and of **sum** are as follows:

CONJUGATION	PRES. INDIC.	PRES. INFIN.	PERF. INDIC.	PERF. PART.
I	parō	parāre	parāvī	parātus
II	habeō	habēre	habuī	habitus
III	(a) pōnō	pōnere	posuī	positus
	(b) capiō	capere	cēpī	captus
IV	mūniō	mūnīre	mūnivī	mūnītus
<i>Irregular Verbs</i>	sum absum	esse abesse	fui āfui	futūrus ¹ āfutūrus

299.

Tense Stems

Every Latin verb has approximately *one hundred and fifty forms*, all of which are built upon **three stems**, obtained from the principal parts as follows:

1. To find the **present stem**, drop **-re** from the present infinitive active: **parā-**, etc.

2. To find the **perfect stem**, drop **-ī** from the perfect indicative active: **parāv-**, etc.

3. To find the **participial stem**, drop **-us** from the perfect participle: **parāt-**, etc.

Query. — What tenses are formed (a) upon the present stem, (b) upon the perfect stem, (c) with the perfect participle?

300. First Conjugation: Review of Principal Parts

Verbs of the first conjugation generally form the perfect stem by adding **-v** to the present stem (235, **Note**) and form the perfect participle by adding **-tus** to the present stem (269). Review the meanings of the following verbs, whose principal parts are perfectly regular:

Word Study: Intensive Prefixes

Most of the Latin prepositions which are used as prefixes in Latin and English may have intensive force, especially **con-**, **ex-**, **ob-**, **per-**. They are then best translated either by an English intensive, as *up* or *out*, or by an adverb, as *completely*, *thoroughly*, *deeply*. Thus **com-***moveō* means to *move greatly*, **per-***magnus*, *very great*, **ob-***țineō*, to *hold on to*, **con-***citō*, to *rouse up*, **ex-***cipiō*, to *catch, receive*.

305. The Relative Pronoun *Quī* (*Study 611, c.*)

The pronouns *who*, *which*, *what*, and *that* in English are called **relative** pronouns because they *relate* or refer to some *foregoing* word, called their **antecedent**.

There is only one relative pronoun in Latin, declined as follows:

<i>quī, who, which, that</i>						
	SINGULAR			PLURAL		
<i>Nom.</i>	<i>quī</i>	<i>quae</i>	<i>quod</i>	<i>quī</i>	<i>quae</i>	<i>quae</i>

<i>Acc.</i>	<i>whom, which, that</i>	<i>which, that</i>
<i>Abl.</i>	<i>by, etc., whom, which</i>	<i>by, etc., which</i>

306. Relative Pronouns as Used in English

While *that* as a relative can be used to refer to both persons and things, *who* always refers to persons and *which* to things (in other words, *which* is the neuter of *who*). *Which* and *that* do not change form to indicate case, while *who* does:

Nom. *who* Gen. *whose* Dat. and Acc. *whom*

¹ Note that the genitive singular is alike in all genders, likewise the dative singular, and that the accusative singular, masculine and feminine, ends in *-m*, as in English *whom*. As in all pronouns, the nominative singular feminine is like the nominative plural neuter.

307. The Relative Pronoun as Used in Latin

In the following sentences the antecedent and relative are underscored. Give the number and gender of each:

1. (a) Puella abest; puellam accūsō, *The girl is absent; the girl I accuse.*

(b) Puella quam accūsō abest, *The girl whom I accuse is absent.*

2. Oppidum quod vidit erat parvum, *The town which he saw was small.*

3. Castra ex quibus vēnimus erant magna, *The camp from which we came was large.*

4. Virum cui librum dedi vidisti, *You saw the man to whom I gave the book.*

5. Puer cuius librum habeō est amīcus noster, *The boy whose book I have is our friend.*

Observe that the relative and the antecedent are always of the same number and gender but not necessarily in the same case.

308. Rule. — *The relative pronoun agrees with its antecedent in gender and number, but its case depends upon its use in its own clause.*

Note. — While the relative may be omitted in English, it is never omitted in Latin: *The man (whom) I saw*, **Vir quem vidi.**

309. Drill. — Copy and write in Latin the proper form of the underscored English words:

1. I saw the horses that were on the road.

2. The boy whom I visited is my cousin.

3. Have you seen the girl to whom I gave the books?

4. The man by whom we were robbed has been arrested.

5. Where is the road by which we came?

6. I know the town in which he was born.

7. The land from which our parents came is beautiful.

313. Interesting English Words

Many English words that seem quite dull and ordinary have very interesting stories locked up within them. The key to these stories is Latin. Use this key and do not lose it. Let us try it now.

The "efficient" person is the one who *accomplishes* (*efficiō*) something — remember this when you hear people talk about "efficiency." A "traction" company is engaged in *drawing* or *hauling* vehicles. What is a "tractor"? What sort of person is a "tractable" person? Politicians should remember that a public "office" is a *duty*. An "office" is also a place where one does his *duty* or *daily work*.

314. Second Conjugation: Review of Principal Parts

The following are verbs already studied, but whose principal parts have not been given in full. Memorize their principal parts and give the three stems of each:

dēbeō	dēbere	dēbuī	dēbitus
mereō	merere	meruī	meritus
terreō	terrere	terruī	territus
valeō	valere	valuī	valitūrus
teneō	tenere	tenuī	tentus ¹
contineō	continere	continui	contentus
retineō	retinere	retinui	retentus
doceō	docere	docui	doctus
augeō	augere	auxi	auctus
maneō	manere	mānsi	mānsus ¹
iubeō	iubere	iussi	iussus
moveō	movere	mōvi	mōtus
removeō	removere	remōvi	remōtus
videō	videre	vidi	vīsus

Note. — It will be seen that no general rule can be given for forming the perfect and participial stems of verbs of the second conjugation. The most common type, however, is illustrated by *dēbeō*. Note the other types, which are arranged in groups.

315. Ablative of Manner

In English, the manner of an action is expressed by an adverb or a phrase answering the question *How?* When a phrase is used, a preposition, such as *with*, introduces it.

In Latin, manner is similarly expressed:

¹ In this book the perfect participle is given as the fourth principal part even when it is rare or used only in the neuter. This is done for the sake of simplicity and to help in the matter of word formation. In the case of intransitive verbs the perfect participle cannot of course be translated as a passive and should be learned merely as a principal part.

1. **Cum studiō labōrat**, *He labors with eagerness (eagerly).*
2. (**Cum**) **magnō studiō labōrat**, *He labors with great eagerness (very eagerly).*

Note that when an adjective is used, **cum** may be omitted.

Caution. — Be careful to distinguish this latest use of “with” from the “with” studied in section 190 under **Caution**. Distinguish the three different uses of “with” in these sentences:

- (a) *I shall go with him with the greatest pleasure.*
- (b) *We can work with greater success with this equipment.*
- (c) *With my auto I can cover the distance with you with ease.*

319. Latin Phrases in English

Cui bonō? (lit., *to whom for a good?*) *For whose benefit is it?*
What good is it?

in absentīā, *in absence.*

in perpetuum, (*to perpetuity*), *forever.*

Īlium fuit, *Ilium has been* (i.e. *no longer exists*), said of Troy (Īlium) after its destruction by the Greeks; now applied to anything that is past.

320. Interrogatives (*Study 611, b.*)

I. **Pronoun.** — In English, the interrogative pronoun *who* refers only to persons, *what* refers only to things.

In Latin, the interrogative pronoun corresponding to *who* and *what* is **quis, quid**, declined as follows:

	M. AND F.	N.	M.	F.	N.
Nom.	quis, <i>who?</i>	quid, <i>what?</i>	quī	quae	quae
Gen.	cu'ius, <i>whose?</i>	cu'ius, <i>of what?</i>	quō'rum	quā'rum	quō'rum
Dat.	cui, <i>to whom?</i>	cui, <i>to what?</i>	qui'bus	qui'bus	qui'bus
Acc.	quem, <i>whom?</i>	quid, <i>what?</i>	quōs	quās	quae
AbI.	quō, <i>by whom?</i>	quō, <i>by what?</i>	qui'bus	qui'bus	qui'bus

Note. — The plural is translated like the singular.

II. Adjective. — In English, the interrogative pronoun *who* cannot be used as an adjective; we cannot say, *Who man?* But *what* may be used as an adjective, referring to persons or things: *What man?* *What thing?*

In Latin, the interrogative adjective is **quī, quae, quod**, declined throughout like the relative pronoun (305). Compare the interrogative **quis** with the relative **quī** and note differences in the singular.

Note. — In English, *which* can be used as pronoun or adjective, referring to persons or things. It differs in meaning from *who* and *what* in that it implies a limited choice: *Which hat shall I wear?* *Which do you mean, Mr. Jones or Mr. Smith?* **Quis** and **quī** are used in this sense only when more than two are involved.

321. Drill. — Decline *what ally?* *what price?*

Lapsūs Linguae ("Slips of the Tongue"). — Have you ever said, *Who did you see?* Why is *who* incorrect? Give the correct form and translate the sentence into Latin.

325. Latin and English Word Formation

Ante- has its regular meaning and form when used as a prefix. **Trāns-** means *through* or *across*, and sometimes has the form **trā-**, as **trā-dūcō**.

Importance of the Verb. — The most important part of speech in Latin for English derivation is the verb, and the most important part of the verb is the *perfect participle*. This form is also the most important for Latin word formation. Therefore *learn carefully* the principal parts of every verb. Nothing is more important.

By associating Latin word and English derivative, you can make the English help you in your Latin, and *vice versa*. You can often tell the conjugation or the perfect participle of a Latin verb by the help of an English derivative. The English word *mandate* shows that **mandō** has **mandātus** as its perfect participle and

is therefore of the first conjugation. Similarly *migrate*, *donation*, *spectator*, etc. The word *vision* helps one remember that the perfect participle of *videō* is *vīsus*. Similarly *motion* from *mōtus*, *merit* from *meritus*, *missive* from *missus*, *position* from *positus*, *active* from *āctus*.

FIG. 101. PORTA NIGRA IN TRIER, GERMANY

This magnificent "black gate" was built by the Romans.

326. Third Conjugation: Review of Principal Parts

Memorize the principal parts of these verbs already studied and give the three stems of each. No rule can be given for the formation of the third and fourth parts, from which the perfect and participial stems are obtained, but the commonest type has a perfect ending in *-sī*. The participle ends in *-tus* or *-sus*:

I cēdō	cēdere	cessī	cessus
(Similarly accēdō, discēdō, excēdō, prōcēdō)			
gerō	gerere	gessī	gestus
mittō	mittere	mīsī	missus
(Similarly āmittō, committō, dīmittō)

trahō	trahere	trāxī	trāctus
pōnō	pōnere	posuī	positus
dēfendō	dēfendere	dēfendī	dēfēnsus
agō	agere	ēgī	actus
nōscō	nōscere	nōvī	nōtus
II capiō	capere	cēpī	captus
accipiō	accipere	accēpī	acceptus
incipiō	incipere	incēpī	inceptus

faciō	facere	fēcī	factus
afficiō	afficere	affēcī	affectus
efficiō	efficere	effēcī	effectus
fugiō	fugere	fūgī	fugitūrus

Note. — The change or lengthening of the vowel of the perfect and participial stems may be compared with the change of vowel in English *sing, sang, sung*, etc.

The Latin Influence upon English

Latin words have kept coming into English continuously from the beginning of the language down to the present moment. Julius Caesar twice visited the island of Britain with his army and fought with the native Celts, as he relates in his book called the "Gallic War." But the Romans did not conquer the island until a century later. During the first four centuries of our era the Romans ruled Britain, and the towns at least became thoroughly Roman. Though they then abandoned it, they left a number of Latin words in the speech of the native population. Some of these words were afterwards adopted by the Angles and Saxons when they invaded the island nearly fifteen hundred years ago and gave their name (*Angle-land, Eng-land*) and language to the island. Their language was a form of German, for they came from northern Germany. Even there they had taken some Latin words into

their language. So you see that one may say that Latin affected English even before English existed as a separate language.

As the Romans in Britain found it necessary to build many military camps, which developed into towns, the word **castra** is to be found in a number of town names, many of which have been used in our country also. So *Chester* (Pa.), *Ro-chester* (N. Y.), *Man-chester* (N. H.), *Wor-cester* (Mass.), *Glou-cester* (Mass.), *Lan-caster* (Pa.). What other names with these endings can you give?

343. The Latin Influence upon English (*Cont.*)

In the preceding lesson we saw that a number of Latin words came into English as a result of the Roman occupation of Britain. Other examples are *wall* (from **vāllum**), together with place names like *Walton* (*Wall-town*), *port* (from **portus**, *harbor*), together with place names like *Portsmouth*, *street* (from **strāta**), *Lin-coln* (from **colōnia**, *colony*); cf. *Cologne*, the name of a city in Germany, which was an ancient Roman colony.

A century and a half after the Angles and Saxons settled in England, Pope Gregory sent a number of missionaries, including the famous Augustine, to convert the island to Christianity. As the missionaries spoke Latin, they introduced a number of Latin words into English, especially words dealing with the Church, *e.g.* *temple* (**templum**), *disciple* (**discipulus**), *bishop* (**episcopus**). This last word came into Latin from Greek.

344. Participles Used as Clauses

The participle, although sparingly used in English, is exceedingly common in Latin. It often serves as a *one-word substitute* for a subordinate clause, introduced in English by *who*, etc., *when* or *after*, *since* or *because*, *although*, and *if*. The meaning of the Latin sentence as a whole will always determine the precise meaning of the participle. Make it a rule to translate the participle *literally* before attempting to expand it into a clause. Note the various translations in the following:

- | | |
|-------------|---|
| Relative | 1. <i>Oppida capta vidī, I saw the towns which had been captured</i> (lit., <i>the captured towns</i>). |
| Temporal | 2. <i>Convocatī ad proelium dūcentur, After they have been called together, they will be led to battle</i> (lit., <i>having been called together</i>). |
| Causal | 3. <i>Territī nōn prōcessērunt, Because they were terrified, they did not advance</i> (lit., <i>having been terrified</i>). |
| Adversative | 4. <i>Territī nōn cessērunt, Though they were terrified, they did not yield.</i> |
| Conditional | 5. <i>Territī cēdent, If terrified, they will yield.</i> |

Observe that the *perfect* participle denotes time *before* that of the leading verb.

349. General Review of Principal Parts

1. Give the four parts of the following verbs: *mittō*, *cēdō*, *dūcō*.

(a) Form three compounds from each of the above verbs and give their principal parts.

2. Give the four parts of the following: **agō**, **capiō**, **veniō**, **faciō**, **pōnō**.

(a) Form one compound from each of the above verbs and give its principal parts.

3. Give in Latin the principal parts of the following verbs: *defend*, *flee*, *have*, *be*, *see*, *remain*, *teach*, *increase*, *frighten*, *learn*.

350. 1. Give in English the principal parts and a synopsis of *be* and *have* in the 1st plur.

2. Give a synopsis of **audiō** in the act. 3rd plur.; **capiō** in the pass. 1st plur.; **moveō** in the act. 2nd sing.; **agō** in the pass. 3rd sing.

351. Decline **quae nātūra**, **modus vester**, **quod rēgnum**, **signum parātum**, **dominus monitus**.

352. Perception Device for Learning the Verb (*To the Teacher*)

This device is intended to fix the general scheme of the Latin verb as represented in the first and second conjugations.

Select three pieces of white cardboard 10 × 6 in. and print upon each in large letters one of the three stems of some regular verb. Next cut four pieces of cardboard 4 × 6 in., upon each of which place one of the four tense signs (**bā**, **bī**,¹ **erā**, **eri**). Cut six cards of the same size for each of the active personal endings; the reverse side should be used for the corresponding passive endings. Similar cards should be prepared for the first three tenses of **sum**, used in

¹ The future sign **-ē-** of the 3rd and 4th conjugations should be placed upon the reverse side. In like manner, the subjunctive signs may be placed later on the back of the other tense-sign cards, in order to save duplication.

forming the perfect system in the passive. After the four parts of the given verb have been written upon the blackboard and the three stems plainly underscored, proceed to build verb forms in the various tenses by holding up before the class a set of cards, as follows:

MOVĒ	BA	NTUR
------	----	------

Modifications in the present and imperfect tenses of the third and fourth conjugations (and elsewhere), due to the "connecting" vowel, must be explained by the teacher, for they cannot be illustrated conveniently.

Drill on verb forms must be incessant. Prompt recognition of tense, voice, and mood can be secured by having the student *translate* promiscuous verb forms selected from a large group written on the blackboard, representing both voices and every tense.

353. Conversation: Counting

(The teacher assigns a number — "Ūnus," "Duo," "Trēs," etc., to each of ten pupils. The following questions and others like them should be answered by the pupil whose number furnishes the correct answer.)

Magister. Quot (*how many*) sunt duo et quattuor?
Discipulus "Sex." Duo et quattuor sunt sex.

M. Quot sunt quattuor et quīnque? **D.** "Novem."
 Quattuor et quīnque sunt novem.

Note. — A competitive game can be made by having two sets of ten (or less) and scoring one for the side whose representative answers first.

356. GLIMPSES OF ROMAN LIFE

Amusements

The chief amusements for the people as a whole were the circus, the gladiatorial shows, and the theater. The oldest and most popular was the circus with its races, fully described in the “Story of Lucius” (cf. Figs. 104, 105). The races were the main thing; gradually

various side shows and acrobatic exhibitions were added to fill in the time between races. The modern circus is descended from the ancient, but the chariot races no longer have the same prominence.

The circus games were held at public expense on holidays. They were held in the valley between the Palatine and Aventine. Originally the people sat on the hillsides; later magnificent stands seating 200,000 people were built. Other circuses were built in Rome and elsewhere, but the original Circus Maximus remained the chief one.

For the interest these games created we may compare our baseball and football games. There were various racing clubs, distinguished by their colors, like our schools and colleges; we are reminded also of the "Red Sox" and "White Sox" of baseball. Drivers were popular heroes and often became rich. Their records and those of the horses were carefully kept. One man is said to have won 3559 races. This reminds us of the attention given to the number of home runs made by "Babe" Ruth.

The theater was another important place for amusement. In imitation of Greek custom, Roman theaters were semicircular and open to the sky. The actors usually wore masks which indicated what kind of part the actor was playing. Women's parts were played by men. Both comedies and tragedies were given. The most famous writers of comedies were Plautus and Terence. Their plays are still in existence.

The gladiatorial contests were rather late importations from Etruria, the country to the north of Rome. At first they consisted of sword fights between two

men — fencing matches with swords instead of foils. Curiously enough, these fights took place at funerals. Later on these became very popular. Fights between men and animals (like the Spanish bullfights) were added, as well as fights between animals. Sometimes very elaborate shows were put on. They were held in open air amphitheaters — which may be described as two theaters put together. Many Roman towns all over the world had their theaters and amphitheaters. The famous Colosseum at Rome (Fig. 61) was not built until 80 A.D. It had room for 50,000 people.

358. Third Declension: Masculine and Feminine Nouns

The genitive singular of nouns of the third declension ends in **-is**; the base is obtained by dropping this ending. All three genders are found among nouns of the third declension, and no general rule can be given. The gender, as well as the nominative and genitive singular, must therefore be learned from the vocabulary.¹ Masculine and feminine nouns are declined alike, as follows:

Latin and English Word Studies

Latin words should not be memorized individually but in groups — by *families*, so to speak. This is much easier, much more useful, and much more interesting. For example, there is the word **pēs**, the father of its family. From it are derived many other words in Latin and in English. **Im-pediō** means to *entangle the feet*. An “impediment” is a *tangle*, something in the way. Transportation is still a big problem with an army; it is no wonder that the Romans, without railroads or motor trucks, called the baggage train of the army **impedimenta**. **Ex-pediō** means to get the *foot out* of the tangle; therefore in English an “expedient” is a means of solving a difficulty. To “expedite” matters is to hurry them along by removing obstacles in the way.

You have already become acquainted with several other “families” of words (218). Other words which

should be grouped together are **regō**, **rēgnum**, and **rēx**; **dō** and **dōnō**; **dūcō** and **dux**; **ager** and **agricola**; **cōsulō** and **cōnsilium**.

365. Ablative Absolute: The Participle Used Independently with a Noun

(a) In English, we occasionally say, *This meeting with your approval, I shall act accordingly*. Inasmuch as such phrases are used loosely and have no direct connection with either the subject or the predicate of the sentence, they are said to be in the **nominative absolute**, i.e. they are *absolutely free* in a grammatical sense from the rest of the sentence. The phrase quoted above is equivalent to an adverbial clause: *Since this meets with your approval, etc.*

In Latin, this loose construction is very common, with this difference: the *ablative* is used instead of the nominative. This independent use of the participial phrase is known as the **ablative absolute**. The perfect participle is most frequently used in this construction.¹ Translate the participle *literally* before attempting to expand it into a subordinate clause of *time*, *cause*, *condition*, etc. (see 344).

1. **Servō accūsātō** (lit., *the slave having been accused*) **dominus discessit**, *After accusing the slave, the master departed*.

2. **Litterīs nōn missīs** (lit., *a letter not having been sent*) **puer pecūniam nōn accēpit**, *Because he did not send a letter, the boy did not receive the money*.

3. **Oppidīs nostrīs captīs** (lit., *our towns captured*) **bellum gerēmus**, *If our towns are captured, we shall wage war*.

¹ Occasionally a noun, adjective, or present participle (to be studied later) is used.

(b) In English, there is an active and a passive past participle: *having sent* (act.), *sent* or *having been sent* (pass.). In Latin, there is only a passive perfect participle. If, therefore, in English the active past participle is used with an object, the phrase must be recast so as to become passive in the same tense before it is translated into Latin:

English: *having given the signal* (active)
the signal having been given (passive)
 Latin: **signō datō.**

Caution. — The ablative absolute cannot be used when the noun or pronoun with which the participle agrees forms any part of the main sentence (subject or predicate). Compare the following sentence with those above (365, a) and note that the ablative absolute construction cannot be used because the participle in this case must agree with the subject:

Servus accūsātus territus est, *The slave, having been accused, was terrified.*

366. Rule. — *A noun in the ablative case used with a participle, adjective, or other noun and having no grammatical connection with the subject or the predicate is called an ablative absolute.*

367.

Exercises

Oral. 1. Dux Gallōrum, signō datō, cōpiās proelium committere iussit. 2. Captīvī miserī, trāctī ad pedēs rēgis, pācem timidē petēbant. 3. Duce captō, nostrī pācem nōn petēbant. 4. 373. English Word Studies

Many English words preserve the original Latin forms of the third declension, either in the singular or in the singular and plural. Examples of the masculine and feminine types are:

SINGULAR	PLURAL	SINGULAR	PLURAL
apex	apexes or apices	index	indexes or indices ¹
appendix	appendixes or appendices	vertex	vertexes or vertices
calyx	calyxes or calyces		

Nouns with their plurals in **-s** are **consul, ratio,** and a large number of nouns in **-or: actor, doctor, factor, labor, victor,** etc.

Examples of neuter nouns are:

SINGULAR	PLURAL	PLURAL
genus	genera	viscera (singular rare)
stamen	stamina or stamens ¹	

Nouns with plurals in **-s** are: **omen, specimen,** etc.

The genitive case is preserved in *jurisdiction, jurisprudence, legislator.*

377. Summary of Ablative Uses

The uses of the ablative may be grouped under three heads:

I. The true or "from" ablative (**ab**, *from*, and **lātus**, *carried*), used with the prepositions **ab**, **dē**, or **ex** — if any preposition is used. The ablative of agent (with **ab**) belongs here.

II. The associative or "with" ablative, used with the preposition **cum** — if any preposition is used. The ablatives of means, accompaniment, and manner belong here.

III. The place or "in" ablative, used with the prepositions **in** or **sub** — if any preposition is used.

Every ablative construction may be put into one of these groups. Sometimes the use is literal, as, *I am going **with** you*. Sometimes it is figurative, as, *I shall buy a book **with** the money*.

FIG. 112. THEATER OF POMPEY, ROME

As some of the Romans had a prejudice against theaters, Pompey built a temple of Venus and a theater together, so arranged that the seats of the theater served as steps leading to the temple. Both have now disappeared.

¹ Nouns marked with an asterisk (*) are i-stem nouns. The genitive plural of such nouns is always given in these vocabularies.

² *National enemy*, differing from *inimicus*, *personal enemy*.

³ The ablative singular ends in *-ī*.

381. Third Declension: *I*-Stem Nouns

The important group of nouns which have **-ium** instead of **-um** in the genitive plural are called ***i*-stem nouns**. In addition, neuters ending in **-e**, **-al**, and **-ar** have **-ī** instead of **-e** in the ablative singular, and **-ia** in the nominative and accusative plural. The classes of *i*-stem nouns are:

I. *Masculines and Feminines*

1. Nouns ending in **-is** having no more syllables in the genitive than in the nominative: **cīvis**.
2. Nouns of one syllable whose base ends in two consonants: **pars** (gen. **part-is**), **nox** (gen. **noct-is**).

II. *Neuters*

384. English Word Studies

Many Latin *i*-stem nouns ending in *-is* are preserved in their original form in English. The original plural in *-es* is pronounced like "ease":

finis	_____

Distinguish **axes** from *axes* (plural of *ax*), **bases** from *bases* (plural of *base*). **Finis** has no plural in English.

Neuter *i*-stems in English (with plurals in *-s*) are **animal**, **exemplar**, **tribunal**.

ten'dō, -ere, tetēn'dī, ten'tus, *stretch* (tendon)

387. The Right Word in the Right Place

We have observed from a study of *agō* (291) that a Latin word may have many shades of meaning, which are suggested by the context. In translating, therefore, do not confine yourself to the "vocabulary" meaning of the word but select the particular meaning demanded by English usage. Observe the varying translation of *magnus, -a, -um* when used with the following nouns:

Exercise. — (a) Combine *magnus, -a, -um* with each of the following nouns already studied and translate freely and naturally: *periculum, studium, cōpiae, pretium*.

(b) How does **altus**, **-a**, **-um** differ when applied to rivers and mountains?

(c) Translate **puella pulchra** and **homō pulcher**.

388. Gender of Third Declension Nouns

1. Nouns ending in **-or** are almost all masculine: **auctor**, **labor**.
2. Nouns ending in **-dō** and **-gō** are feminine: **magnitūdō**, **imāgō**.
3. Nouns ending in **-tās** and **-tūs** are feminine: **cīvitās**, **virtūs**.

393. Adjectives of the Third Declension

The adjectives thus far studied, such as **magnus**, **-a**, **-um** and **sacer**, **-cra**, **-crum**, have been declined like nouns of the first and second declensions. Many adjectives, however, are declined like *i*-stem nouns and are therefore called **adjectives of the third declension**. With the exception of one important class, which will be studied later, practically all adjectives of the third declension are *i*-stems. They are divided into classes according to the number of forms which are used in the nominative singular to denote gender, as follows:

1. **Two endings**¹ — masculine and feminine in **-is**, neuter in **-e**: **fortis**, **forte**.
2. **One ending** — one form for all genders: **pār**.

Adjectives of the third declension have **-ī** in the ablative singular, **-ium** in the genitive plural, and **-ia**

¹ A few adjectives in **-er** have *three endings* in the nominative singular, one for each gender: **celer**, **celeris**, **celere**.

in the neuter nominative and accusative plural. Note particularly that the ablative singular, unlike that of most *i*-stem nouns, ends in *-ī*.

396. English Word Studies

A number of English nouns and adjectives preserve the nominative singular and a few, the nominative plural of Latin adjectives of the third declension: **par**, **pauper**, **simplex**, **duplex**, etc.; **September**, etc.; **amanuensis**. Neuter forms occur in **simile**, **facsimile**, **insignia** (singular rare), **regalia** (singular rare), **forte** (singular only). The dative plural is preserved in **omnibus** (a vehicle *for all*) and the ablative singular in **velocipede** (a vehicle *with swift foot*). Note that this word shows that in the third declension most *adjectives* have *-ī* in the ablative, while most *nouns* have *-e*.

(1) Decline *dux fortis, libertās nostra, omnis miles, rēx magnus, nāvis pulchra*.

(2) Give the following in Latin:

- (a) *small authority* in the nom., sing. and plur.
- (b) *an easy journey* in the gen., sing. and plur.
- (c) *a good citizen* in the dat., sing. and plur.
- (d) *a brave enemy* in the acc., sing. and plur.
- (e) *the deep sea* in the abl., sing. and plur.

(3) Review the **classes of *i*-stem nouns**, with one example of each, giving (a) genitive singular, (b) ablative singular, (c) genitive plural, (d) accusative plural.

How to Learn Words

Repetition is the first law of memory, or, as the Romans said, **Repetitiō est māter studiōrum**. New words must be repeated often enough to fix them in your mind for future use. You will find the following device helpful:

After studying the new vocabulary, noting carefully the genitive singular and gender of every noun, the principal parts of each verb, etc., close the book and write on a narrow slip of paper the English meanings (not the Latin) of as many of the Latin words as you can recall. Then open your book and check up your list, filling in any blanks. Close the book again and, on the other side of the slip, write the full Latin form of each English word, and afterwards check mistakes by referring to the book. Close the book once more. With the slip in your hand, give the English meanings from the Latin list. After mastering the Latin words so that you do not need to turn the slip for the meaning of a single word, take the English side and proceed in the same way until you can give the Latin for every English word, without turning the paper. Another way is to write a Latin word on one side of a slip of paper or a small card and the English meaning on the other side. When you find that you know a word thoroughly, put the slip to one side.

Association is the second law of memory. In order to make use of this important principle in mastering new words, try at once to give an English derivative for every new Latin word.¹ Whenever possible, recall the *primitive* or simple word from which the new word has been formed; e.g. **amicus**, **inimicus**, **amicitia** — all from **amō**, *I love*.

¹ Classes using the *vocabulary notebook* method will find nothing new in this suggestion.

English Word Studies

(a) Give the Latin noun suggested by each of the following: *civil*, *finish*, *submarine*, *navigate*, *author*, *corpulent*, *legislate*, *nominal*, *decapitate*.

(b) Give the Latin verb suggested by each of the following: *expedite*, *press*, *verse*, *attention*, *repellent*.

(c) Give the Latin adjective suggested by each of the following: *omnipresent*, *celerity*, *facilitate*, *disparity*, *fortitude*.

(d) Find and use in sentences as many English derivatives as possible from **parō**, **teneō**, **agō**, and **scribō**.

Enter the derivatives in your notebook, using a separate page for each Latin word.

Deī

Rōmānī multōs deōs habuērunt. Deōs in omnibus locīs vīdērunt — in terrā, in agrīs, in frūmentō, in montibus, in silvīs, in undīs maris, in aquā flūminum, in omnī nātūrā. Erant magnī 5 deī et parvī deī, deī deaeque. Inter magnōs deōs prīmus erat Iuppiter, rēx deōrum hominumque, quī in caelō habitābat et fulmine malōs 10 terrēbat. Iūnō erat uxor Iovis¹ et rēgīna deōrum. Venus erat pulchra dea amōris. Mārs, deus bellī, arma pugnāsque amābat. 15 Mercurius erat celer nūntius deōrum. Neptūnus erat deus maris, quī equōs in undīs regēbat. Reliquī magnī deī erant Cerēs, dea frūmentī, Minerva, dea sapientiae, Diāna, dea silvārum, Vulcā- 20 nus, deus ignis, Apollō, deus ōrāculōrum, Bacchus, deus vīnī.

 40 Penātēs erant deī quī cibum servābant. Vesta erat dea focī, in quō cibum parābātur. Ad focum erant parvae fōrmæ deōrum. Ibi, omnibus liberīs convocātīs, pater Lūcī deīs grātiās agēbat et cibum dōnābat. Quondam nōn multus cibum erat, sed
 45 tamen pater deīs dōnābat. Lūcius ā patre petit: “Cūr cibum deīs ā tē datur? Nōn multum habēmus.” Pater respondit: “Cibō datō, deī hominibus magna beneficia et longam vītā dabunt.”

GLIMPSES OF ROMAN LIFE

411. Roman Religion

In the oldest form of the Roman religion there was a god or spirit for almost everything — even for the hinges of the door. Essentially this was a religion of

the family. The worship came to center about the household god known as the Lar (plural, Lares). Other household gods of importance were Vesta, goddess of the hearth, the Penates, gods of the food supply, and the Genius, or guardian spirit of the head of the house. This family worship remained the most vital part of Roman religion.

There were many other gods. In course of time, as Greek influence increased, some of these were identified with the chief Greek gods: Jupiter with Zeus, Mars with Ares, etc. These gods all had their special functions: Neptune was god of the sea, Ceres was the goddess of grain, etc.

The identification of the Greek and Roman gods illustrates a common practice among the Romans, that of borrowing gods from other people. First they borrowed from their neighbors, later from people farther away. So in the course of time various religions were introduced from Egypt, Asia Minor, and Persia.

Among the Romans religion was the business of the state. Temples were built and restored by the government, and the priests, including the **pontifex maximus**, or chief priest, were government officials.

One important phase of the official religion was the

FIG. 120. SHRINE
From a house in Pompeii.

attempt to determine the will of the gods in various ways. The augurs were a group of priests whose business it was to determine whether a certain important act (such as a military expedition) would be successful. This they did by watching the flight of birds. Certain movements were supposed to indicate success; others, failure. Many intelligent Romans lost faith in this practice but kept it up in order to influence the more ignorant classes. Another practice, borrowed from the Etruscans, was to examine the entrails of animals for light as to the will of the gods. These two methods were official and were used before important matters were undertaken. Private persons also resorted to numerous unofficial fortune tellers, such as astrologers.

With so many gods to worship, the Romans naturally had very many holidays. Some of these were celebrated with amusements as well as religious observances, as is true of our holidays to-day. The amusements about which you have read (356) developed in this way.

413. English Word Study: Importance of the Third Declension

The third declension is very important in Latin on account of the number of words which belong to it. Hence more English words are derived from nouns and adjectives of this declension than from any other declension. The English word is usually derived from the base, and not from the nominative. It is therefore doubly important to memorize the genitive, from which the base is obtained. It would be difficult to see that *itinerary* is derived from *iter* if one did not know that the genitive is *itineris*. Examine the words of the third declension studied thus far, and see how many have derivatives from the base. Note the help given for English spelling: *temporal*, *corporal*, *military*, *maritime*, *nominal*, etc.

On the other hand, the English derivative will help you determine the genitive. In the following list of words, a derivative is placed after each; give the genitive: *religiō* (*religion*), *sermō* (*sermon*), *latus* (*lateral*), *rādix* (*radical*), *orīgō* (*original*), *ēruptiō* (*eruption*), *custōs* (*custody*), *dēns* (*dental*), *mōs* (*moral*).

414. The Demonstratives *Hic* and *Ille* (Study 611, d.)

In English, *this* and *that* are used to point out persons or objects and are therefore called **demonstratives**. They may be used as adjectives or pronouns; as, *This man did not write that*.

In Latin, **hic** means *this* (near the speaker in place or thought), while **ille** means *that* (more distant from the speaker). From such expressions as *this man*, *that woman*, etc., the demonstrative adjectives **hic** and **ille** came to be used as substitutes for a third person pronoun *he*, *she*, *it*. The personal pronoun, however, is usually not required in Latin.

Observe that both **hic** and **ille** in the plural are declined regularly, like **bonus**, -a, -um, with the exception of the nominative and accusative plural neuter of **hic** (**haec**). Note that **hic** and **ille** resemble **quī** in the genitive singular.

415. Position of Demonstratives

Demonstrative adjectives regularly precede their nouns in Latin and English: *this boy*, **hic puer**; *that girl*, **illa puella**. Therefore, when *that* precedes its noun, it is a demonstrative adjective (**ille**); when it follows, it is a relative pronoun (**quī**), equivalent to *who* or *which*: *The man that I saw was famous*, **Vir quem** (not **illum**) **vīdī clārus erat**.

420. Latin Phrases in English

Alma Māter, *fostering mother*, applied to an educational institution.

A.D. (annō Dominī), *in the year of our Lord*.

aut Caesar aut nihil, *either Caesar or nothing*.

iūstitia omnibus, *justice for all* (motto of the District of Columbia).

Pater Noster, *Our Father*, i.e. the Lord's Prayer, which begins with these words.

primus inter parēs, *first among his equals*.

Stābat Māter, *The mother was standing* — a thirteenth-century Latin hymn which begins with these words.

421. Ablative of Time When

In English, adverbial phrases with or without the prepositions *in*, *on*, etc. are used to express time: *last summer*, *in winter*.

In Latin, time when is expressed by the ablative, *usually without a preposition*.

1. *Illō annō hostēs nōn timuimus*, *That year we did not fear the enemy*.

2. *Aestāte agrī semper sunt pulchrī*, *In summer the fields are always beautiful*.

Note. — Compare with the ablative of place where (95, a). Observe that when *at*, *in*, or *on* denotes *time* instead of *place*, no preposition is used in Latin.

422.

426. How Is Is Used. — Instead of pointing, in a forceful way, to a definite person or thing, as **hic** and **ille** do, **is** usually refers to somebody or something just mentioned. When used without a noun, it is commonly translated as a personal pronoun, *he, she, or it*; accordingly, the genitive **eius** may be translated *his, her, its*, while **eōrum** (m. and n.) and **eārum** (f.) mean *their*. **Is** often serves as the antecedent of a relative clause; as, **Is quī videt probat**, *He who sees approves*.

428. English Word Studies: The Names of the Months

In early Roman times the year began March 1, and February was the last month. We still use the ancient Roman names of the months. **March** was named after Mars. **April** was the *opening* month (*aperiō*), when the earth seems to open up. **May** is the month when things become *bigger* (*maior*). **June** is Juno's month. **July** was originally called **Quīntīlis**, the *fifth* month, but was renamed in honor of Julius Caesar after he had the calendar reformed. Similarly **August** was originally **Sextīlis**, the *sixth* month, but was renamed after the Emperor Augustus. **September** was originally the *seventh* month and kept its name even after it later became the ninth; similarly, **October**, **November**, **December**. **January** was named after **Janus**, the god of beginnings. **February** was the time of purification (*fēbrua*), like the Christian Lent.

Midās

Midās, rēx Phrygiae, Sīlēnō, magistrō deī Bacchī, auxilium dederat. Ob hanc causam ēgregiō praemiō ā deō dōnātus est: deus parātus fuit eī dare id quod cupīvit. Midās dīxit: “Sī omnia quae corpore meō

Hōc factō, omnia quae rēx tangēbat in aurum mūtābuntur. Terram tangit: nōn iam terra est sed aurum. Aquam tangit: eōdem modō in aurum mūtātur. Tum grātiās Bacchō prō magnō praemiō ēgit.

10 Tum cēnam ēgregiam et magnam parārī iussit et omnia genera cibōrum in mēnsā pōnī. Haec mēnsa ab eō tācta erat et mūtāta in aurum. Dum magnā celeritāte servī cēnam parant, Midās amīcōs nōbilēs convocāvit. Grātō animō bonam cēnam quae parāta erat

20 Tandem ad Bacchum, auctōrem malōrum, rēx miser prōcessit et fīnem supplicī petīvit — nam supplicium, nōn iam praemium erat id quod ā deō accēperat. Bacchus iussit eum in flūmine Pactōlō sē³ lavāre. Praeceptis rēx ad flūmen cucurrit, ubi sē lāvit. Arēna⁴

436. English Word Studies: The Norman-French Influence

We saw in earlier lessons (337, 343) how Latin words were introduced into English at its very beginning. A very important period of influence was after the Norman conquest of England (1066). The language of the Normans was an old form of French, itself descended from Latin. In the course of a few centuries, the English language underwent striking changes and adopted many French (Latin) words. These sometimes show considerable changes in the original spelling. Especially common is the addition of a vowel (cf. 558).

Exercise. — Look up the Latin originals of *captain, vizor, hom-age, duke, peer, treason*. See Scott's *Ivanhoe*, Chap. I, for *pork, beef*, etc.

437. The Intensive in English and Latin

In English, compound pronouns are formed by joining *-self* to *my, your, him, her, it*, and the plural *-selves* to *our, your, them*. These compounds may be used in an intensive or emphatic sense; as, *I saw the man myself*.

In Latin, the pronoun **ipse** is a compound of **is** (425) and the intensive particle **-pse**, and therefore has purely intensive force: **Ipse hominem vīdī**, *I saw the man myself*. Note that **ipse** may be used alone in the nominative to emphasize an omitted subject. It is declined like **ille**, except in the neuter nominative and accusative singular.

Declension of *Ūnus*

The numeral *ūnus* and the other words in the vocabulary of this lesson are irregular only in the genitive and dative singular of all genders. In these cases they are declined like *ipse* (437), in all others like *magnus*.

¹ Note that the neuter nominative and accusative singular end in **-d**, not **-m** (cf. *ille*).

² The genitive singular of *alter* ends in **-ūs**.

³ *Uter*, which (of two), and *uterque*, each, both, are likewise irregular and belong to this group but are comparatively unimportant.

Note. — Like *hic*, *ille*, and *is*, these adjectives are emphatic and accordingly precede their nouns.

442. Drill. — Decline in the singular *alius frāter*, *neutra soror*, and *tōtum oppidum*.

443. Words Often Confused

I

alius = *another*, implying a group of *three or more*.
alter = *the other*, i.e. of *two* and no more.

II

tōtus = *whole*, i.e. no part missing, not capable of being divided.
omnis = in singular *every*, as opposed to the adj. *nūllus*, *no*; in plural, *omnēs* = *all*, i.e. simply a collection of units or parts.

III

nūllus = *not any*, *no* — always an adjective.
nihil = *not a thing*, *nothing* — always an indeclinable noun.
*nēmō*¹ = *no man*, *no one* — always a noun.

I have seen neither. 4. In the summer the farmer tills the fields, but what does he do in winter? 5. We have already dispatched reinforcements, but there is no danger now.

445. English Word Studies: Spelling

Latin words are often very helpful in fixing the spelling of English words. In this lesson we shall consider words in which a double consonant occurs.

If the Latin word has a double consonant, it is usually preserved in English, except at the end of a word: *terrestrial*, but *inter* (from **terra**); *carriage*, but *car* (**car-rus**); *rebelled*, but *rebel* (**bellum**); *remitted*, but *remit* (**remittō**). *Letter* has two *t*'s and *literature* only one in the root because the spelling of Latin **littera** varied.

Many prefixes bring about the doubling of consonants by assimilation. The most important are **ad-**, **con-**, **in-**, **ob-**, **ex-**, and **sub-**. If you will analyze the English word, you can often tell whether the consonant is to be doubled: **con-** and **modus** form **commodus**; prefix **ad-** and you get the English derivative *ac-com-modate* with two *c*'s and two *m*'s. Similarly *commend* has two *m*'s; *re-com-mend* has two *m*'s but only one *c* because **re-** is never assimilated. Other examples of doubling through assimilation are *im-material*, *ac-celerate*, *suf-ficient*, *ef-ficient* (but *de-ficient*, for **dē-** is not assimilated).

Exercise. — Find five more examples of doubling of consonants as a result of assimilation.

ūnā vōce, with one voice, unanimously.

Vōx populi vōx Dei, The voice of the people (is) the voice of God.

449. Present Participle (Study 631.)

In English, the **present participle** has both an active and a passive form: (a) *I have a brother **fighting** in France*; (b) *The battle now **being fought** will be decisive*. In both examples the present participle *modifies a noun*. It is likewise used in making the progressive verb form: *My brother **is fighting***. Here “fighting” does not modify the noun but is a part of the verb and denotes progressive action (see 23, b).

In Latin, the **present participle** has only the active form. It is used to modify nouns or pronouns and never combines with the verb *sum* to form verb phrases. *My brother is fighting* becomes in Latin simply *frāter meus pugnat*. The present participle, like the present infinitive, represents an act as taking place at the time indicated by the main verb.

450. Formation and Declension. — The present participle of the four conjugations is formed by adding **-ns** to the present stem. It is declined like a third declension adjective of one ending (393), with the base ending in **-nt-**, as follows:

M. AND F.		N.	M. AND F.		N.
<i>Nom.</i>	pa'rāns	pa'rāns	paran'tēs		paran'tia
<i>Gen.</i>		paran'tis		paran'tium	
<i>Dat.</i>		paran'ti		paran'tibus	
<i>Acc.</i>	paran'tem	pa'rāns	paran'tēs(-is)		paran'tia
<i>Abl.</i>		paran'te(-ī)		paran'tibus	

Note. — (a) The ablative singular ending is regularly **-e**, but **-ī** is used instead whenever the participle is used simply as an adjective. (b) In verbs of the fourth conjugation, and **-iō** verbs of the third, **-ie-** appears throughout, forming the base **-ient-**, as **audiēns, audientis; capiēns, capientis**. (c) **Sum** has no present participle; that of **possum** is **potēns**.

451. Future Active Participle

Latin, unlike English, has a **future active participle**. This is formed by dropping the **-us** of the perfect participle and adding **-ūrus, -a, -um**: **parātūrus, -a, -um**, *about to prepare, going to prepare*; **futūrus, -a, -um**, *going to be*. It is declined like **magnus, -a, -um**.

452. Drill. — Form and translate the participles of **rogō, opprimō, and expellō** in the present and future active.

The suffix **-or**, when added to the participial stem, indicates the doer of an action: **monitor** (*one who warns*), **scrīptor** (*one who writes*), **inventor** (*one who finds*). It is used in English in the same way.

When the suffix **-or** is added to the present base of a verb, it usually indicates a state of being or condition: **timor**, **amor**, **terror**. It is used in English.

Exercise. — Find five English words which are formed by adding the suffix **-or** to the stems of verbs that you have studied.

English Word Study: Spelling

The base of the Latin present participle is **-ant**, **-ent**, or **-ient**, according to the conjugation (450). This is used as a suffix in English, with the same meaning as the participial ending *-ing*.

A common mistake in the spelling of English words is due to the confusion of **-ant** and **-ent**. Reference to the Latin partly solves the difficulty:

(a) All English words derived from the first conjugation follow the Latin spelling with an **-a-**: *expectant*, *emigrant*.

(b) All adjectives and most nouns derived from the other conjugations follow the Latin spelling with an **-e-**: *continent*, *regent*, *agent*, *efficient*.

(c) But some nouns have an **-a-**: *tenant*, *defendant*.

Exercise. — Give eight English words with suffix **-ant** or **-ent** derived from Latin words previously studied.

463. Perfect Passive and Future Active Infinitive

(a) The **perfect passive infinitive** is a compound tense, formed by using the perfect participle with the present infinitive **esse**: **parātus, -a, -um esse**, *to have been prepared*; **habitus, -a, -um esse**, etc. (cf. perfect passive indicative: **parātus sum**).

(b) The **future active infinitive** is a compound tense, formed by using the future active participle with the present infinitive **esse**: **parātūrus, -a, -um esse**, *to be going to prepare*; **habitūrus, -a, -um esse**, etc.

There was no future passive infinitive in common use in Latin.

(c) **Learn** the infinitives, active and passive, of the model verbs (655–659) and **sum** (660).

464. Drill. — Form and translate the infinitives, active and passive, of **iaciō**, **ostendō**, and **prohibeō**.

465. Infinitive with Verbs of Saying, etc.

In English, we use a “that” clause after verbs of *saying, thinking, knowing, hearing*, and the like: *He says (that¹) the boys are coming*. But sometimes we use the infinitive: *The boys are said to be coming; I know him to be a good man; I heard him say this*.

In Latin, the infinitive is *always* used after such words: **Dicit puerōs venīre**. Note that **puerōs** is in the accusative because it is the subject of an infinitive (263). The word *that* is not translated.

¹ *That* is occasionally omitted.

466. Direct and Indirect Statement

1. Dicit, "Pueri veniunt." *He says, "The boys are coming."*
2. Dicit pueros venire, *He says that the boys are coming.*

In the first sentence the exact words of the speaker are given, as shown by the use of quotation marks. Such a sentence is called a **direct statement**. In the second sentence the exact words are not given. Such a sentence is called an **indirect statement**.

467. Rule. — *Statements that convey indirectly the thoughts or words of another, used as the objects of verbs of saying, thinking, knowing, hearing, perceiving, or the like, require subjects in the accusative and verbs in the infinitive.*

468. Who or Whom? — Explain how a knowledge of indirect statement in Latin will enable one to use *who* and *whom* correctly, as follows: (a) *Mr. Smith is a man who, I believe, is honest;* (b) *Mr. Smith is a man whom I believe to be honest.*

472. English Word Studies

By addition of the suffix **-ia** (251) to the base of the present participle, a suffix **-antia** or **-entia** is formed which becomes **-ance**, **-ence**, **-ancy**, or **-ency** in English (cf. the change of **-tia** to **-ce** (265): **scientia**, *science*). The difficulty in spelling is again removed by reference to the Latin (cf. 462).

Exercise. — Give eight English nouns with this suffix derived from Latin words previously studied.

473. How Indicative and Infinitive Differ in Tense

1. *It was thought that he was present.*
2. *He was thought to be present.*

In the first sentence, the verb in the subordinate clause is in the past indicative. In the second sentence, the infinitive *to be* refers to the same time but is in the

¹ Cf. 393, footnote 1.

present tense. The tenses of the **indicative** are determined by their *relation to present time*, but the tenses of the **infinitive** are determined by their *relation to the verbs on which they depend*. This is true in Latin as in English and should be remembered in translating a Latin infinitive into an English "that" clause.

474. How the Tenses of the Infinitive Differ

1. The present infinitive represents time or action as *going on*, from the standpoint of the introductory verb:

$\begin{matrix} \text{Dicit} \\ \text{Dixit} \end{matrix} \left\{ \begin{matrix} \\ \end{matrix} \right\} \text{eōs pugnāre, } He \left\{ \begin{matrix} \text{says} \\ \text{said} \end{matrix} \right\} (\text{that}) \text{ they } \left\{ \begin{matrix} \text{are} \\ \text{were} \end{matrix} \right\} \text{fighting.}$

2. The future infinitive represents an act that will occur *later*, from the standpoint of the introductory verb:

$\begin{matrix} \text{Dicit} \\ \text{Dixit} \end{matrix} \left\{ \begin{matrix} \\ \end{matrix} \right\} \text{eōs pugnātūrōs esse, } He \left\{ \begin{matrix} \text{says} \\ \text{said} \end{matrix} \right\} (\text{that}) \text{ they } \left\{ \begin{matrix} \text{will} \\ \text{would} \end{matrix} \right\} \text{fight.}$

3. The perfect infinitive represents time or action as *completed before* that of the introductory verb:

$\begin{matrix} \text{Dicit} \\ \text{Dixit} \end{matrix} \left\{ \begin{matrix} \\ \end{matrix} \right\} \text{eōs pugnāvisse, } He \left\{ \begin{matrix} \text{says} \\ \text{said} \end{matrix} \right\} (\text{that}) \text{ they } \left\{ \begin{matrix} \text{have} \\ \text{had} \end{matrix} \right\} \text{fought.}$

475. a. Note that the participle in the compound forms of the infinitive must agree with its subject (see 2 above).

b. A Helpful Hint. — In translating indirect statements into Latin, use the tense of the infinitive corresponding to the indicative tense which would have been used in a direct statement.

476.

480. Review of Participles

We have seen that the Latin participle furnishes a convenient means for conveying various ideas expressed by dependent clauses in English. Review 344.

481. Noun and Adjective Review

(a) Decline *haec pars, idem supplicium, pater ipse, ea aestās, hoc genus, nūlla vōx, sōlus frāter*.

(b) Give the genitive and dative singular of *nūllus pater, ūlla māter, altera soror, sōlum flūmen, neutrum iter*.

482. Verb Review

(a) Give a synopsis of *timeō* in the 3rd plural active; of *remittō* in the 3rd singular passive.

(b) Form the participles, active and passive, of *dīcō, iaciō, sciō, and rogō*.

(c) Form the infinitives, active and passive, of *sentīō, intercipiō, currō, and expugnō*.

(d) Conjugate *sum* and *possum*.

483. English Word Studies: A Review

(a) Give the Latin nouns suggested by the derivatives: *cordial, partial, generation, fraternity, sorority, vocal, maternal*.

(b) Give the Latin verbs suggested by the derivatives: *sedentary, cursive, remiss, inspiration, cult, expulsive, oppressive, diction, ostensible, prohibit*.

(c) Find and use in sentences as many English derivatives as possible from *dīcō, putō, trahō, audiō, and premō*.

Enter the derivatives in your notebook, using a separate page for each Latin word.

484. Vocabulary Matches (*To the Teacher*)

Latin word contests, especially between two divisions of the same class, excite keen rivalry and lead to a ready mastery of words. After every member of the class has faithfully prepared all the vocabularies of a given number of lessons, have two leaders choose sides, as in an old-fashioned spelling bee. The teacher dictates the English word, and the students in turn give the Latin word in full (*i.e.* principal parts, if a verb; genitive singular and gender, if a noun). When a student misses a word or one of its parts, he takes his seat. Better yet, allow all pupils to remain in the contest and score one minus point for each word missed. The side having the fewest minus points wins. Much interest is added if a descriptive name is given to the contesting sides, such as "*Altī vs. Brevēs*," "*Puerī vs. Puellās*," etc.

486. GLIMPSES OF ROMAN LIFE

The House and Its Furniture

The Roman town house was different from ours and more like that of southern Europe to-day. As glass was expensive, there were few windows on the street. The typical house, as found in numerous examples at Pompeii, consisted of two parts, front and rear. The front consisted of a large room, called the atrium, surrounded by small bedrooms. The atrium had an opening in the roof for light and air. The roof sloped down to the opening. Below the opening there was a basin into which the rain fell. This cistern, as we may call

it, furnished the soft water for washing, so necessary in a country where most of the water is hard. At the corners of the basin there were often columns extending to the roof (Fig. 170).

As the house was built directly on the street, it had no front yard. The heavy front door opened into a hall leading into the atrium. On one side of the hall there might be a small shop, usually rented out to people who did not live in the house. On the other side there was the room of the doorkeeper (*iānitor*). Very often there was a place for a watchdog. Sometimes a fierce dog was painted on the wall or depicted in mosaic on the floor of the hall.

Opposite the entrance was the study or office (*tablinum*) of the master of the house, placed so that he could keep an eye on what was going on. Here he kept his safe. Often there were also upstairs rooms (Fig. 150).

The rear of the house surrounded a garden. Because of the columns which ran all around the garden this part was called the peristyle. It was often very pretty. Charming fountains and statuary were usually to be seen in the garden. Kitchen, bathroom, dining rooms, were in this part of the house. There were often two dining rooms, one on the shady side for summer, the other on the sunny side for winter.

The walls were covered with elaborate paintings (Fig. 65). Rugs and draperies were in common use. The floors were usually covered with stone flags or mosaic, as in Italy to-day, instead of wood. There was not much furniture. Chairs were few, and many of them were without backs. On the other hand, there were many couches, used like easy-chairs, not only for read-

ing and resting but also at the dinner table. There were many kinds of tables and stands, often very beautiful. Three-legged stands were especially common. Many small lamps of bronze or clay (Fig. 31) were placed everywhere, some on stands, some on large, elaborate candelabra.

FIG. 139. A KITCHEN IN POMPEII

Pots and pans are still in place on the stove.

Olive oil was burned in such lamps. Glass chimneys were unknown. The light was so poor that people went to bed early and got up early. Candles were also used.

Kitchen utensils and dishes were made of bronze, silver, or earthenware. Those made of earthenware were chiefly red in color and were decorated with engraved lines.

Besides the town houses just described, there were country homes (*villae*) which were more elaborate. In Rome there were also apartment houses, called *insulae* because they were "islands" surrounded by streets. These were often rather tall. Many were flimsily built for speculation. As a result they were an easy prey for fires.

Comparison of Adjectives

Adjectives are inflected to show degree. This is called **comparison**. There are three degrees: **positive**,

comparative, superlative. The positive is the simple form of the adjective; the others indicate a greater degree.

In English, the comparative is formed by adding **-er** (**-r**) to the positive: *high-er*, *brave-r*. The superlative is formed by adding **-est** (**-st**) to the positive: *high-est*, *brave-st*. But adjectives of more than one syllable are often compared by the use of *more* and *most*: *more skillful*, *most skillful*.

In Latin, adjectives regularly add to the base of the positive the endings **-ior** (m. and f.), **-ius** (n.), to form the comparative, and **-issimus**, **-a**, **-um** to form the superlative:

POSITIVE	COMPARATIVE	SUPERLATIVE
altus, -a, -um, <i>high</i> (base alt-)	altior, altius, <i>higher</i>	altissimus, -a, -um, <i>highest</i>
fortis, -e, <i>brave</i> (base, fort-)	fortior, fortius, <i>braver</i>	fortissimus, -a, -um, <i>bravest</i>

Hints for Translating. — The comparative may often be translated *more*, *too*, *rather*; the superlative, *most*, *very*, *exceedingly*.

489. Declension of the Comparative

Adjectives are declined as follows in the comparative:

	M. AND F	N.	M. AND F.	N.
<i>Nom.</i>	al'tior	al'tius	altiō'rēs	altiō'ra
<i>Gen.</i>	altiō'ris	altiō'ris	altiō'rum	altiō'rum
<i>Dat.</i>	altiō'rī	altiō'rī	altiō'ribus	altiō'ribus
<i>Acc.</i>	altiō'rem	al'tius	altiō'rēs	altiō'ra
<i>Abl.</i>	altiō're	altiō're	altiō'ribus	altiō'ribus

Observe that, while comparatives are declined like adjectives of the third declension, they do not have *-ī* in the abl. sing., *-ium* in the gen. plur., or *-ia* in the nom. and acc. plur. neuter.

490. Drill. — (a) Compare *grātus*, *-a*, *-um*; *nōbilis*, *-e*; *clārus*, *-a*, *-um*; *levis*, *-e*; *longus*, *-a*, *-um*. (b) Decline *tardus*, *-a*, *-um* in the comparative.

491. Remember that in Latin the same case is used after *quam* as before it, but in English the nominative is often used after *than*: *Fortiōrem virum quam illum nōn vīdī*, *A braver man than he I have not seen.*

493.

English Word Studies

It is important to distinguish different words from the same stem. "Plain" and "plane" both come from **plānus**, *level*. A "plain" is a *level* field; a "plain" person is not above the average *level* in appearance, etc. A "plane" is a *level* surface (hence "plane" geometry); it is also a tool which makes surfaces *level*. "Plane" is therefore used in a more literal, "plain," in a less literal, sense.

A "corpse" is a dead *body* (from **corpus**); a "corps" (pronounced "core") is a *body* of men forming part of an army. The former is literal, the latter, figurative. A "corporation" is a *body* of men united for commercial or other purposes. A "corpuscle" is a little *body* in the blood. "Corporal" punishment is punishment inflicted upon the *body*, *i.e.* a whipping. Anything "corporeal" has a *body*, *i.e.* it is not imaginary. Similarly, a "principal" is the *leading* person in a school; a "principle" is a *leading* rule.

496. English Word Study: The Suffix -iō

In Latin, the suffix -iō is added to verb stems, usually to the participial stem. As this generally ends in -t or -s, words of this origin generally end in -tiō or -siō. The suffix indicates an act or the state which results from an act: ōrātiō is the act of speaking, or the result, *i.e.* a speech. Nouns with this suffix have -iōnis in the genitive. Accordingly, the base ends in -n. Hence the English form of the suffix, which is very common, is -ion (-tion, -sion): *region, oration, session*. It often has the force of the suffix -ing.

Exercise. — Give and define ten English words with the suffix -ion derived from Latin verbs which you have studied.

497. Formation of Adverbs

(a) For adverbs formed from adjectives of the first and second declensions, see 188.

(b) Adverbs are formed from adjectives of the third

declension, as a rule, by adding **-iter** to the base; as, adj., **fortis**, adv., **fortiter**; adj., **ācer**, adv., **ācriter**.

498. The **comparison of adverbs** is similar to that of adjectives:

POSITIVE	COMPARATIVE	SUPERLATIVE
al'tē	al'tius	altis'simē
for'titer	for'tius	fortis'simē

Note that the comparative adverb has the same form as the neuter accusative singular of the comparative adjective.

499. Drill. — Form and compare adverbs from the following adjectives already studied:

503. Comparison of *-er* Adjectives

All adjectives ending in *-er* form the superlative by adding *-rimus*, *-a*, *-um* to the nominative singular masculine of the positive:

POSITIVE	COMPARATIVE	SUPERLATIVE
crē'ber, crē'bra, crē'brum	crē'brior, crē'brius	crēber'rimus, -a, -um
li'ber, li'bera, li'berum	libe'rior, libe'rius	liber'rimus, -a, -um
ā'cer, ā'cris, ā'cre	ā'crior, ā'crius	ācer'rimus, -a, -um

Note. — The corresponding adverbs end in *-ē* in the superlative: *crēberrimē*.

504. Drill. — Compare *sacer*, *celer*, *miser*, *pulcher*, *firmus*, *altus*.

505. Five Adjectives with Superlative in *-limus*

The superlative of five adjectives ending in *-lis* is formed by adding *-limus*, *-a*, *-um* to the base of the positive:

fa'cilis, -e	faci'lior, faci'lius	facil'limus, -a, -um
diffi'cilis, -e	diffici'lior, diffici'lius	difficil'limus, -a, -um
si'milis, -e	simi'lior, simi'lius	simil'limus, -a, -um
dissi'milis, -e	dissimi'lior, dissimi'lius	dissimil'limus, -a, -um
hu'milis, -e	humi'lior, humi'lius	humil'limus, -a, -um

Note. — Other *-lis* adjectives, such as *nōbilis*, *-e*, *ūtilis*, *-e*, etc., form the superlative regularly — *i.e.* by adding *-issimus*, *-a*, *-um* to the base of the positive: *nōbil-is'simus*, *-a*, *-um*.

The corresponding adverbs end in *-ē* in the superlative: *facillimē*.

506. Dative with Adjectives

1. *Hic liber est similis illi, This book is similar to that.*

2. *Ille homō est frātrī meō inimicus, That man is unfriendly to my brother.*

Observe that the dative is often used with Latin adjectives whose English equivalents are followed by *to*. The following have already been studied: **amīcus, inimīcus, similis, dissimilis, aptus, grātus.**

508. Legal Phrases in English

Lawyers use so many Latin phrases daily that they must be familiar with Latin. A few such phrases are:

subpoenā, a summons to court *under penalty* for failure to attend.

ex post factō, *resulting after the fact*; e.g. a law which makes punishable acts committed before its passage.

in fōrmā pauperis, *in the form (or manner) of a poor man*; to sue as a poor man and so avoid the costs of the suit.

in propriā persōnā, *in one's own person* (not through some one else).

511. Irregular Adjectives Compared

In English, certain adjectives in common use are compared irregularly, such as *good, better, best; bad, worse, worst*.

In Latin, the following adjectives, among others, are compared irregularly and should be memorized:

POSITIVE	COMPARATIVE	SUPERLATIVE
bonus, -a, -um (<i>good</i>)	melior, melius (<i>better</i>)	optimus, -a, -um (<i>best</i>)
malus, -a, -um (<i>bad</i>)	peior, peius (<i>worse</i>)	pessimus, -a, -um (<i>worst</i>)
magnus, -a, -um (<i>large</i>)	maior, maius (<i>larger</i>)	maximus, -a, -um (<i>largest</i>)
parvus, -a, -um (<i>small</i>)	minor, minus (<i>smaller</i>)	minimus, -a, -um (<i>smallest</i>)
multus, -a, -um (<i>much</i>)	—, plūs ¹ (<i>more</i>)	plūrimus, -a, -um (<i>most</i>)

Exercise. — Find English derivatives of the above words.

¹ Gen. plūris; there is no masculine and feminine singular, and no dative in any gender; the plural is plūrēs, plūra, gen. plūrium, etc. See 647.

512. Irregular Adverbs Compared

Adverbs formed from the above adjectives are compared, in general, according to the rule (498); irregularities not explained by reference to the corresponding adjective forms are underscored and should be noted carefully:

POSITIVE	COMPARATIVE	SUPERLATIVE
bēnē (<i>well</i>)	melius (<i>better</i>)	optimē (<i>best</i>)
malē (<i>badly</i>)	peius (<i>worse</i>)	pessimē (<i>worst</i>)
—	magis (<i>more</i>)	maximē (<i>most</i>)
—	minus (<i>less</i>)	minimē (<i>least</i>)
multum (<i>much</i>)	plūs (<i>more</i>)	plūrimum (<i>most</i> ,

Note. — Certain other irregular adjectives and adverbs occur less frequently in the comparative and superlative forms and have accordingly been omitted from the list to be memorized. A few will be introduced as vocabulary words in the form in which they most frequently occur.

513. Extrēmus and Summus. — In English, it is necessary to employ nouns to translate adjectives like **extrēmus** and **summus**: in **extrēmā ōrātiōne**, *at the end of the speech*; **summus mōns**, *top of the mountain* (cf. **reliquī mīlitēs**, *rest of the soldiers*; in **mediō flūmine**, *in the middle of the river*). When thus used the adjective commonly precedes its noun.

518. Reflexive Pronouns

In English, the pronouns *myself, ourselves, etc.*, may be used in apposition with a noun or pronoun for emphasis, like Latin **ipse** (437): *I saw him myself, Ipse eum vidī*. They are also used alone as objects of verbs or of prepositions to refer to the subject of the verb; they are then called **reflexive pronouns**: *I saw myself*.

In Latin, the personal pronouns of the first and second persons may be used reflexively, but in the third person Latin has a special reflexive pronoun, **suī**, declined alike in the singular and plural:

Gen. su'ī,	of himself, herself, itself, themselves
Dat. si'bi,	to " " " "
Acc. sē (sē'sē),	" " " "
Abl. sē (sē'sē), with (from, etc.)	" " " "

Query. — Why is **suī** without a nominative?

519. How Reflexive Pronouns Are Used

(ego) *mē rogō, I ask myself* (nōs) *nōs rogāmus, we ask ourselves*
 (tū) *tē rogās, you ask yourself* (vōs) *vōs rogātis, you ask yourselves*
 (is) *sē rogat, he asks himself* (eī) *sē rogant, they ask themselves*

520. Drill. — Give a synopsis of *liberō*, 1st sing.; *fallō*, 2nd plur.; *caedō*, 3rd sing., using the proper reflexive pronoun with each.

FIG. 151. A FOOD SHOP IN POMPEII AS IT WAS

521. Reflexive Adjectives

Corresponding to *meus*, *tuus*, etc., derived from *ego*, *tū*, etc., there is the reflexive adjective *suus*, *-a*, *-um*, *his own*, etc., derived from *suī*.

Caution. — Remember that *suus*, *-a*, *-um* always refers to the subject of the verb. When *his*, *her*, etc., do not refer to the subject, *eius*, etc., must be used (426).

English Word Studies

In the fourteenth century there began a great revival of interest in the ancient Latin and Greek authors. This revival is known as the **Renaissance**, or **Renaissance** (re-nāscor). Beginning in Italy, it spread over western Europe and reached England in the sixteenth century. Ever since that time new words have been added to English from Latin and Greek in great numbers. As a result, over ninety per cent of the words in Caesar and Cicero have English derivatives. Words

of this last period are easily distinguished by their similarity to the Latin originals.

One result of the introduction of new words directly from the Latin was the formation of a number of **doublets**, words derived at different periods from the same Latin word and having different meanings. Note the following (the earlier form precedes): *conceit*, *conception* (**concupiō**); *sample*, *example* (**exemplum**); *feat*, *fact* (**factum**); *Mr.*, *master* (**magister**); *loyal*, *legal* (**lēx**); *mayor*, *major* (**maior**); *treason*, *tradition* (**trādō**); *chance*, *cadence* (**cadō**).

Exercise. — Show how the above doublets got their meanings from the original Latin meaning.

524. Pyrrhus et Fabricius

Lēgātī Rōmānī ad Pyrrhum missī sunt et ab eō bene acceptī sunt. Ūnus ex lēgātīs Rōmānīs, Fabricius, Pyrrhō maximē grātus erat. Eī Pyrrhus sēcrētō dīxit: “Cūr nōn in Ēpīrō manēs? Quārtam rēgnī meī partem
5 tibi tribuam.” Sed Fabricius dīxit sē numquam partem rēgnī eius sūmptūrum esse. Proximō annō Fabricius cum Pyrrhō pugnāvit. Medicus rēgis nocte ad eum vēnit et prōmīsīt sē prō praemiō Pyrrhum interfectūrum esse. Fabricius iussit hunc ligātum redūcī ad do-
10 minum et Pyrrhō omnia dīcī. Tum rēx maximē mōtus dīxit: “Ille est Fabricius quī nōn facilius ab honestāte quam sōl ā cursū¹ suō āvertī potest!”

trā'dō, -ere, trā'didī, trā'ditus, <i>give or hand over, deliver</i>	[dō]

526. Ordinal Numerals

You have already learned the **cardinal** numbers used in counting from 1-10 (339). To show order or succession other numbers, called **ordinals** (*first, second, etc.*), are used. The Latin ordinals are declined like **magnus**, -a, -um. Memorize the first ten ordinals as follows¹:

prī'mus, -a, -um, <i>first</i>	sex'tus, -a, -um, <i>sixth</i>
secun'dus, -a, -um, <i>second</i>	sep'timus, -a, -um, <i>seventh</i>
ter'tius, -a, -um, <i>third</i>	octā'vus, -a, -um, <i>eighth</i>
quār'tus, -a, -um, <i>fourth</i>	nō'nus, -a, -um, <i>ninth</i>
quīn'tus, -a, -um, <i>fifth</i>	de'cimus, -a, -um, <i>tenth</i>

Drill. — Suggest and define one English derivative from as many of these ordinals as possible.

¹ For complete list of cardinals and ordinals, see 649.

527. Declension of *Duo* and *Trēs*

The cardinal numbers from 4 to 100 are indeclinable. You have learned the declension of *ūnus*, -a, -um (441). *Duo*, *two*, and *trēs*, *three*, are declined as follows:

	M.	F.	N.	M. AND F.	N.
<i>Nom.</i>	du'o	du'ae	du'o	trēs	tri'a
<i>Gen.</i>	duō'rum	duā'rum	duō'rum	tri'um	tri'um

<i>Acc.</i>	du'ōs	du'ās	du'o	trēs	tri'a
<i>Abl.</i>	duō'bus	duā'bus	duō'bus	tri'bus	tri'bus

528. Declension and Use of *Mille*

Mille, when used to denote one thousand, is usually an indeclinable adjective (like *centum*): *mille hominēs*. When used of two or more thousands, it is a neuter plural i-stem noun (cf. *mare*, 381). The word used with the plural forms of *mille* must be in the genitive: *duo milia hominum* (lit., *two thousands of men*), *two thousand men*.

English Word Studies

Much difficulty is caused in English spelling by silent or weakly sounded letters. This difficulty is often solved by referring to the Latin original: *laboratory*, *repetition*, *library*, *separate*, *auxiliary*, *comparative*, *debt*, *reign*, *receipt*. The Latin original often helps in other difficulties: *consensus*, *annuity*, *deficit*, *accelerate*.

Exercise. — Define the above words and give their Latin originals.

Much confusion is caused in English by the combinations *ei* and *ie*. It will be helpful to remember that the derivatives of compounds of *capiō* have *ei*, as *receive*.

(b) From the following French numerals obtain the Latin cardinal numbers from which they are derived and rearrange in the proper sequence:

trois, *sept*, *un*, *cinq*, *quatre*, *dix*, *huit*, *neuf*, *deux*, *six*

(c) From the following English words derive the Latin ordinal numerals and arrange them in the proper sequence:

tertiary, quintessence, quartet, secondary, octavo, primary, decimate.

What three ordinal numbers are not represented? Add these to complete the series 1–10.

(d) Find and use in sentences as many English derivatives as possible from *nāvigō*, *doceō*, *vincō*, *sūmō*.

Caesaris Triumphus

Quondam pater Lūcī ā Forō revertit et dīxit triumphum Caesaris futūrum esse et postea magnōs lūdōs. C.¹ Iūlius Caesar tum erat maximus Rōmānōrum. Galliam, Alexandriam, Pontum, Āfricam vīcerat. Decem annōs in Galliā ēgerat et, multīs milibus hostium pulsīs, illam terram in prōvinciam Rōmānam redēgerat. Pompeius, cum Caesare prō summā potestate contendēs, in fugam datus erat. Tum Caesar in Aegyptum prōcesserat et, Alexandrinīs pulsīs, Cleopātrae nōmen rēgīnae Aegyptiōrum dederat. In Asiā rēgem Pontī celeriter vīcerat et ex eius rēgnō nōtās illās litterās mīserat in quibus erant sōla verba, "Vēnī, vīdī, vīcī." Nunc futūrī erant quattuor triumphī, quod Caesar dē bellīs reverterat.

WAITING

Lūcius numquam triumphum vīderat et dē eō multa rogāvit. Pater eī dīxit triumphum esse similem pom-pae in Circō habitae et Caesarem per Circum et Sacram Viam ad Capitōlium prōcessūrum esse. Lūcius permōtus vix exspectāre poterat. Sed omnia ad eum ³⁰ quī exspectat veniunt; tempus triumphōrum aderat. Prīmus et clārissimus triumphus quem Caesar ēgit erat Gallicus. Pater Lūcī cognātus Caesaris erat et optima loca obtinuit. Ubi Caesar in Campō Mārtiō milītēs īnstrūxit et ex praedā eīs praemia tribuit, pompa tardē ³⁵ prōcēdere incipit.

“HERE THEY COME!”

Post longum tempus (ut¹ Lūciō vīsum est) pompa aderat. Prīmī fuērunt cōsulēs et senātōrēs, post quōs vērunt cornicinēs, quī Lūciō grātissimī fuērunt. Tum cōnspexit titulōs² ducum oppidōrumque captōrum cum ⁴⁰ fōrmīs exemplisque³ oppidōrum. Dē nōminibus nōn nōtīs multa rogāvit: “Quī sunt Aquītānī? Quī sunt Belgae?” Pater respondit: “Gallia est omnis dīvīsa⁴ in partēs trēs; quārum ūnam incolunt Belgae, aliam Aquītānī, tertiam eī quī ipsōrum linguā Celtae, nostrā Gallī ⁴⁵ appellantur. Hōrum omnium fortissimī sunt Belgae.” “Quī sunt Helvētīi?” “Helvētīi cōstituērunt per prōvinciam nostram iter facere quod maiōrēs fīnēs habēre cupīvērunt, sed ā Caesare prohibītī sunt.” “Quis est Ariovistus?” “Ariovistus erat superbus rēx Germānō- ⁵⁰ rum, ā Caesare ex Galliā expulsus.” “Quī sunt Ger-

This lake is in the crater of an extinct volcano. On its shores there once was the city of Alba Longa, whose inhabitants are said to have founded Rome.

542. Accusative of Extent

Duōs annōs remānsit, *He remained two years.*

Flūmen decem pedēs altum est, *The river is ten feet deep.*

Observe that

- (a) *duōs annōs* answers the question, *How long?*
- (b) *decem pedēs* answers the question, *How much?*
- (c) both express *extent* by the accusative;
- (d) the English and Latin constructions are identical and are not to be confused with the direct object.

543. Rule. — *Extent of time or space is expressed by the accusative.*

544. Stop! Look! Think!

The following words, which have already been used, closely resemble one another in form or sound and must be carefully discriminated. For difference in meaning, see the Latin-English Vocabulary at the end of the book:

aetās, aestās	cīvis, cīvītās	ob, ab
accēdō, accidō	gēns, genus	pars, pār
alius, alter, altus	ibi, ubi	pōnō, possum
caedō, cadō, cēdō	liber, liber, liberī	vīs, vir

Most of the names of our states are Indian, but several of them are of Latin origin or form. Vermont means *green mountain* (**viridis mōns**), Pennsylvania is *Penn's woods* (**silva**), Virginia is the *maiden's land* (named after Queen Elizabeth, the virgin queen), Florida is the *flowery land* (**flōs, flōris**), Colorado is the land of the *colored* or *red* river, Montana is *mountainous* (**mōns**), Nevada is the land of *snow* (**nix, nivis**), and Rhode Island is said to be named after the Greek island of Rhodes, meaning *rose*. New Jersey means "New Caesarea," named after the island of Jersey, one of many places named in honor of one of the Caesars. The titles *Kaiser* and *Czar* also come from the name Caesar.

Names whose endings only are Latin are Carolina (Charles II), Georgia (George II), Louisiana (Louis XIV), and Indiana.

su'per, prep. with acc., <i>over, above</i>	[superō]
super'sum, -es'se, -fui, -futū'rus, <i>be left over, survive</i>	[sum]

549. Latin and English Word Formation

Ne- is sometimes used as a negative prefix in Latin: **nēmō** (**ne**-homō), **negōtium** (**ne**-ōtium), **neuter** (**ne**-ūter), **nūllus** (**ne**-ūllus).

Circum, **contrā**, **prae**, and **super** have their usual meanings when used as prefixes in Latin and English. In English **prae** becomes *pre-*, as *pre-pare*, *pre-fix*; **contrā** sometimes retains its form, sometimes becomes *counter-*, as *contra-dict*, *counter-act*. **Super** sometimes takes the form *sur-* in English, in which case it must be distinguished from assimilated **sub-**: *surplus*, *sur-mount*.

Exercise. — Find ten English words with these prefixes, compounded with Latin words which you have studied.

550. Post, Posteā and Postquam

The conjunction **postquam**, meaning *after*, must be distinguished carefully from the adverb **posteā**, mean-

ing afterwards, and the preposition **post**,¹ meaning *after* (with acc.). Examine the following:

1. **Post illud bellum pāx cōfirmāta est**, *After that war peace was established.*

2. **Cōnsidius posteā fuerat in Galliā**, *Considius had afterwards been in Gaul.*

3. **Caesar, postquam Gallōs fugere vidit, cum omnibus cōpiis secūsus est**, *After Caesar saw the Gauls fleeing, he followed with all his troops.*

Note that

- (a) the addition of **quam** to **post** makes **postquam** a conjunction;
- (b) **posteā** means literally *after that*, hence *afterwards*;
- (c) the real difficulty is in the English use of *after*, as both a conjunction and a preposition.

551.

Exercises

Oral. 1. Quis cōspexit nautās nāvigantēs “plānīs” (in locō nāvium) super caput? 2. Post labōrēs bellī omnēs perpetuam pācem spērant. 3. Fourth Declension

We have seen that nouns of the first three declensions are distinguished by the ending in the genitive singular — first declension, *-ae*, second declension, *-ī*, third declension *-is*. The majority of Latin nouns belong to these three declensions. A few nouns, however, have *-ūs* in the genitive singular and belong to the **fourth declension**. Many of these are derived from verbs.

	CASE ENDINGS		cāsus, <i>chance</i> (base, cās-)

¹ Usually has abl. sing. *domō* and acc. plur. *domōs* (641).

555. Gender. — Nouns of the fourth declension in **-us** are mostly masculine; the only exceptions in this book are **manus** and **domus**, both of which are feminine.

556. Drill. — Decline **exercitus noster, impetus fortis**.

He has sworn that he will make an attack upon the enemy at the third hour. 4. The house was deserted; I could see nothing. I touched a body with my hand and shouted.

558. English Word Studies

In two earlier lessons (159, 162) we saw how many English words are simply the base of a Latin noun, adjective, or verb, or the base plus silent **-e**. A great many such words are derived from the Latin words in this book. A few are *par, facile, prime, just, cede, part*.

In the case of verbs, the base of the present indicative, present participle, or perfect participle, or of all three, may furnish an English word: *convene*, *convenient*, *convent*; *remove*, *remote*; *refer*, *relate*.

As previously noted, there are sometimes changes in the base, *e.g.* the dropping of one of two final consonants, as in *remit*, *expel*, and particularly the addition of a vowel to the main vowel of the word, as in the following (the added vowel is underscored): *peace*, *mount*, *reign*, *remain*. *Contain*, *retain*, etc., are from the compounds of *teneō*. The compounds of *cede* are spelled in the same way as the simple verb (*accede*, *precede*, *concede*, *recede*, *intercede*, *secede*), except *proceed*, *succeed*, and *exceed*.

Exercise. — Find ten more words illustrating the above principles.

561.

Idioms

Review the idioms *committere proelium, alius . . . alius, aliī . . . aliī, alter . . . alter, summus mōns, extrēma via*. Memorize the following new idioms:

1. *certiōrem eum facere dē, to inform him about; as, Fēcī eōs certiōrēs dē itinere, I informed them about the road* (what literally?).
2. *quam*, when used with the superlative of an adjective or adverb, means *as . . . possible*. Cf. *quam plūrimī, as many as possible; quam celerrimē, as quickly as possible*.

562.

To with Verbs of Motion

The dative is essentially the "to" or "for" case. We have noticed, however, that, when *to* implies literally *motion toward* a place or person, the accusative is

used. The following are "motion verbs," previously studied, that take the accusative with *ad* or *in*:

accēdō, cēdō, contendō, dūcō, fugiō, mātūrō, mittō, moveō, nāvigō, portō, prōcēdō, prōdūcō, properō, redigō, redūcō, trānsportō, veniō.

563. Dative of Indirect Object: A Summary

When *to* or *toward* does not imply literal motion but indicates the person *to whom* something is given or *toward whom* a benefit, injury, feeling, or quality is directed, the dative must be used. The following verbs, already familiar, are transitive and admit an accusative of the *direct object* and a dative of the *indirect object*:

committō, dicō, dō, dōnō, iungō, mandō, mōnstrō, nūntiō, ostendō, permittō, prōpōnō, reddō, relinquō, respondeō, submittō, trādō, tribuō.

Some of these verbs have as the direct object either a neuter pronoun or an infinitive: **dicō, respondeō, nūntiō.**

Other verbs rarely take any case but the dative: **noceō.**

564.

Exercises

Oral. 1. Militēs quī prae sē equōs agēbant, hostibus vīsīs, quam celerrimē cōstitērunt. 2. Dēmōnstrā mihi illum librum quem tibi reddidī. 3. Virum quī huic praesidiō praefuit illī urbī praeficiam. 4. Written. 1. Show him your new books; he will not harm them. 2. We shall put this general in charge of that province and he will send grain to the city. 3. We shall inform you about all (things). 4. Answer our letters. Write as clearly as possible.

565. Latin and English Word Formation

We have seen (169) that when a Latin word is compounded with a prefix, a short *-a-* or *-e-* is usually changed to short *-i-*. Similarly, *-ae-* is changed to long *-ī-*. From *aestimō* we have *existimō*; from *aequus*, *inīquus*; from *caedō*, *occidō* (English *incision*, *decisive*, *concise*, etc.). The compounds of *caedō*, with long *-ī-*, must be carefully distinguished from the compounds of *cadō*, with short *-i-*.

-Au- is often changed to *-ū-* in compounds: *accūsō* is from *causa*; *interclūdō* and *exclūdō* are from *claudō* (English *recluse*, etc.).

Exercise. — Illustrate these rules by further examples of English derivatives of *caedō*, *quaerō*, *claudō*.

spe'ciēs, speciē'i, f., <i>appearance, pretense, kind</i>	[speciō]
spēs, spe'i, f., <i>hope</i>	[spērō]

568.

Fifth Declension

The last of the noun declensions embraces comparatively few words. **Rēs** and **diēs**, however, occur constantly and should be memorized. Other nouns of the **fifth declension**, as a rule, have no plural; all are feminine except **diēs**, which is commonly masculine.

CASE ENDINGS			diēs, <i>day</i> (base, di-) rēs, <i>thing</i> (base, r-)			
	SING.	PLUR.				
Nom.	-ēs	-ēs	di'ēs	di'ēs	rēs	rēs
Gen.	-ēī	-ērum	diē'ī	diē'rum	re'ī	rē'rum
Dat.	-ēī	-ēbus	diē'ī	diē'bus	re'ī	rē'bus
Acc.	-em	-ēs	di'em	di'ēs	rem	rēs
Abl.	-ē	-ēbus	di'ē	diē'bus	rē	rē'bus

Observe that -e- appears in every ending and that in **diēs** it is long in the genitive and dative singular, though preceding a vowel (604).

569. Drill. — Decline *rēs similis, ūna spēs, diēs longus*.

570. English Word Studies

English words which preserve the forms of the Latin fourth declension are: **census, consensus, impetus, prospectus, status, apparatus** (plural **apparatuses** or **apparatus**; the latter preserves the Latin plural). Note that **consensus** (from **sentiō**) is spelled with an **-s-** but **census** (from **cēseō**) with a **-c-**. An ablative form is seen in **impromptu**.

The fifth declension is represented by **rabies, series, species**. The last two are used in the plural with no change of form (as in Latin). The accusative singular is represented by **requiem**, the ablative by **specie**, and the ablative plural by **rebus**.

A.M., ante merīdiem, before midday; P.M., post merīdiem, after midday; M., merīdiēs, midday.

Latin Phrases in English

cāsus bellī, an occasion for war.

in statū quō, in the situation in which (it was before); status quō, the situation in which (it was before).

bonā fidē, in good faith.

primā faciē, on the first face (of it); e.g. prima facie evidence.

sine diē, without a day (being set); used of adjournment by a parliamentary body.

574.

Genitive and Ablative of Description

1. virī magnae virtūtis, *men of great courage.*
2. spatium decem pedum, *a space of ten feet.*
3. hominēs inimicō animō, *men with (or of) an unfriendly spirit.*

Observe that in English we may say *men of* or *with an unfriendly spirit*. Both are descriptive. Note also that description is similarly expressed in Latin, *i.e.* either by the genitive or the ablative, but only when modified by an adjective.

While the **genitive** and the **ablative of description** are translated alike, the Latin confines the genitive largely to expressions of *measure and number* (see 2) and the ablative to *physical qualities*.

The general whom Caesar put-in-charge of the horsemen was a man of great influence among the Gauls. 4. Do you desire to climb a mountain which has never been explored?

576. Latin and English Word Formation

The suffixes **-ilis** and **-bilis** are added to verb stems to form adjectives. They indicate what *can be done*: **facilis** is "doable," *easy*. The suffix **-ilis** usually becomes **-ile** in English: *facile, fertile*. The more common suffix **-bilis** becomes **-ble, -able, -ible** in English: *noble, credible, terrible, amiable, visible, comparable*.

Several suffixes meaning *pertaining to* are added to nouns and adjectives to form adjectives: **-āris** (English **-ar**), **-ārius** (**-ary**), **-ānus** (**-an, -ane**), **-icus** (**-ic**). Examples of their use in Latin and English are: **famili-āris**, *singular*; **frūmentārius**, *ordinary*; **Rōmānus**, *human, humane*; **pūblicus**, *generic*.

The suffix **-tūdō** (English **-tude**) is added to adjective stems to form nouns and means *state of being*: **magni-tūdō**, *magnitude*.

Exercise. — Find fifteen other examples of these suffixes in English words derived from Latin words already studied.

SYNONYMS. THE STORY OF LUCIUS

585. Synonyms

We rarely find a word in any language which has exactly the same meaning as another word. Words which have approximately the same meaning are called **synonyms**. The diagram may help you to remember the margin of difference between the synonyms **homō** and **vir**, which are often confused.

The following synonyms have occurred in previous vocabularies. Note differences and discriminate in their use:

1. **terra**, *land* (as opposed to water), then some particular *land* or *country*.
finēs, *borders*, hence a *land* or *country* with reference to its boundaries.
patria, *fatherland*, the *land* of one's birth.
2. **dux** [dūcō], *a leader* in any field, but often in a military sense.
princeps, [primus + capiō], the *first* or *chief* man in a group
— usually nonmilitary.
3. **videō**, *see*, the most general word.
cernō, *see clearly*.
cōspiciō, *catch sight of*.

4. labor, *hard work, toil, suffering.*
 opus, *usually a piece of work.*
 negōtium, *lack of leisure [ōtium], business.*
5. potestās, *power in general, opportunity.*
 auctōritās, *influence.*
 rēgnum, *royal power.*
 imperium, *military power, command.*

587. GLIMPSES OF ROMAN LIFE**(a) Dress**

The most obvious difference between ancient and modern clothing was that civilized men did not in the old days wear trousers. These garments were worn in those times by barbarians. After the barbarians destroyed the Roman Empire, their garb became the fashion for all Europe. The same is true of the moustache (without beard). No Roman ever wore one, and it was just as much the mark of the barbarian as trousers were. Down to the second century A.D. most Romans were smooth shaven.

All Roman men wore as an outer garment a long shirt called a tunic, made of white wool. Senators and knights had crimson stripes down the front and back. A belt was worn over this, and the upper part was bloused out over the belt. When a Roman was engaged in some active occupation, he pulled his tunic up to his knees. Such a garment alone was worn in the house.

Over the tunic the Roman citizen might wear the toga. This garment was the official dress of Roman citizens, and only citizens were allowed to wear it. It was made of white wool. The toga of boys and magistrates had a crimson border. When boys grew up they changed to the plain white toga. Important citizens always wore this garment when appearing in public, but the ordinary Roman wore it much less frequently.

The toga was really a sort of blanket which was

thrown over the left shoulder, pulled across the back and under the right arm, and again thrown over the left shoulder. It was not fastened in any way, and it must have been quite a trick to learn to wear it.

Roman women also wore a tunic. Over this the married women wore a **stola**, a long dress with a flounce at the bottom. For street wear a shawl, called a **palla**, was used.

Wool was the chief material for clothing; next came linen. Silk was rare and expensive, while cotton was almost unknown.

In the house men and women wore sandals or slippers; outdoors they wore shoes. Those of magistrates were red. No stockings were worn, though in cold weather old and sickly people sometimes wound cloth around their legs, like the puttees of soldiers.

Hats were rarely worn, except on journeys. Such as there were had broad brims and were flat. Women often wore ribbons and elaborate pins in their hair. Styles in hairdressing changed constantly as with us, but bobbed hair was unknown among adult women.

Read McDaniel, pp. 81-93; Preston and Dodge, pp. 88-104; Johnston, chap. VII.

(b) Food and Meals

The easiest way to give an idea of Roman foods is by listing some important foods which were unknown to the Romans. potatoes, tomatoes, bananas, oranges, sugar, coffee, tea. Butter was rarely used, except externally as a sort of salve or cold cream. Milk and cheese were freely used. Instead of sugar, honey was used for sweetening. The extensive use of honey made

beekeeping a very important occupation. Wheat bread baked in round loaves (Fig. 84) was the "staff of life." Cabbage, onions, beans were among the chief vegetables. Apples, pears, grapes, olives were the chief fruits. The **mālum Persicum** (from which our word *peach* is derived) was, as its name shows, originally brought from Persia.

Much use was made of salads of various kinds, as is true in Italy to-day. Hence one reason for the importance of olive oil. This was used also in cooking, instead of butter, and in lamps.

The favorite meat was pork. Various kinds of fowl and birds were eaten, even peacocks by the wealthy classes. Fish and oysters became extremely popular.

Besides milk and water the chief drink of the Romans was wine. There were many grades of native and imported wines. They were usually mixed with water when drunk at meals.

Breakfast was a simple meal, chiefly of bread. In the country, dinner (**cēna**) was at noon, but in the city this was postponed till early evening. Instead there was a luncheon (**prandium**) at midday or somewhat earlier.

The dinner consisted of a course of relishes (lettuce, onions, eggs, oysters, asparagus, etc.), called the **gustus** (*taste*), followed by the chief course (meat, fish, or fowl and vegetables), then the dessert, called the **secunda mēsa** (*second table*), of fruit, nuts, and sweets. The Latin expression **ab ōvō usque ad mālā**, *from eggs to apples*, meaning from beginning to end, shows what the usual relishes and desserts were. Wine was served with the meal.

The guests reclined on couches instead of sitting on chairs. There were couches along three sides of the rectangular table, each with room for three people. As the guests reclined on their left elbows, only their right hands were free. Forks were rarely used. Food was taken up with the fingers or with spoons. Meat was cut up before being served. Though much use was made of the fingers, we may well imagine that people of culture ate quite as daintily as we do who have forks to help us.

FIG. 170. INTERIOR OF A HOUSE IN POMPEII, RESTORED

APPENDIX

PRONUNCIATION¹

600.

Vowels

At one time the English vowels were pronounced like the Latin, but the pronunciation of English has changed greatly. In French, Spanish, Italian, German, etc., which also have adopted the Latin alphabet, the vowels are still pronounced substantially as in Latin.

Each of the Latin vowels may be pronounced long or short, the difference being one of *time*. This is called **quantity**. In addition, all the long vowels except **a** have a different *sound* from the short vowels. This is called **quality**. The pronunciation is as follows:

<i>a)</i> Long	Short	Long and Short as in
ā as in <i>father</i>	a as first <i>a</i> in <i>aha</i>	<i>Martha</i> (ā , ă)
ē as in <i>they</i>	e as in <i>let</i>	<i>lateness</i> (ē , ě)
ī as in <i>police</i>	i as in <i>bit</i>	<i>seasick</i> (ī , ĭ)
ō as in <i>rope</i>	o as in <i>obey, for</i>	<i>phonograph</i> (ō , ŏ)
ū as in <i>rude</i>	u as in <i>full</i>	<i>two-footed</i> (ū , ŭ)

In this book long vowels are regularly marked -; short vowels are usually unmarked, but *˘* is sometimes used.

(b) **Caution.** — It is very important to distinguish the *sounds* of the long and short vowels. For a person to say, *I heard the din in the hall*, when he meant the “dean,” or *I forgot the debt*, when he meant the “date,” is no worse than to confuse **ī** and **ĭ**, **ē** and **ě** in Latin.

The English equivalents of **e** and **o** are only approximate. Avoid pronouncing **ŏ** like *o* in *not* or in *note*.

601.

Diphthongs

The first three of the following diphthongs (two vowels making one sound) are the ones most commonly used:

¹ The best way to learn correct pronunciation is by careful imitation of the teacher; the rules are given for reference.

ae like *ai* in *aisle*

au like *ou* in *out*

oe like *oi* in *oil*

ei like *ei* in *freight*

eu like *eh-oo* (pronounced quickly)

ui like *oo-ee* (pronounced quickly); only in **cui** and **huic**

602.

Consonants

The Latin consonants have, generally speaking, the same sounds as in English. The following exceptions, however, should be noted:

b before **s** or **t** has the sound of **p**.

c is always hard as in *cat*, never soft as in *city*.

g is always hard as in *go*, never soft as in *gem*.

i (consonant) has the sound of *y* in *year*.

(**i** is a consonant between vowels and before a vowel at the beginning of a word)

s always has the sound of *s* in *sin*; never of *s* in *these*.

t always has the sound of *t* in *ten*; never of *t* in *motion*.

v has the sound of *w* in *will*.

x has the sound of *x* in *extra*.

(**ch** = **k**; **ph** = **f**; **th** = **t**)

Doubled consonants are pronounced separately: **an'-nus**.

603. English Pronunciation of Latin. — The above method of pronunciation is the ancient Roman method. It should be remembered, however, that Latin words which have become thoroughly English should be pronounced as English words; *e.g.* in *terra firma*, the *i* is pronounced as in *firm*, not as in *miracle*; in *alumni*, the *i* is pronounced as in *mile*.

604.

Quantity of Vowels

The quantity (and quality) of vowels must be learned as part of the word. There are, however, a few general rules:

1. A vowel is short before another vowel or **h** (because **h** is weakly sounded).

2. A vowel is short before **nt**, **nd**, and final **m** and **t**.

605.

Syllables

Every Latin word has as many syllables as it has vowels or diphthongs: **vir-tū'-te**, **proe'-li-um**.

A single consonant between two vowels or diphthongs is pronounced with the second: **fi'-li-us**, **a'-git**. Compound words are divided into their component parts and are exceptions to this rule: **ad'-es**.

When two or more consonants occur between vowels or diphthongs, the division is made before the last consonant: **por'-tus**, **vinc'-ti**, **an'-nus**. An exception to this rule occurs whenever a mute (**p, b, t, d, c, g**) is followed by a liquid (**l, r**), in which case the mute combines with the liquid and both are pronounced with the second vowel: **pū'-bli-cus**, **cas'-tra**.

The next to the last syllable of a word is called the **penult**; the one before the penult (or the third from the end) is called the **antepenult**.

606.

Quantity of Syllables

Some syllables of course take longer to pronounce than others, just as some vowels are longer than others.

1. A syllable is *naturally* long if it contains a long vowel or a diphthong.

2. A syllable is long *by position* if it contains a short vowel followed by two or more consonants or the double consonant **x** (= **cs**).

Note. — Exception is made in the case of a mute followed by a liquid (see 605). **H** is so weakly sounded that it does not help make a syllable long.

Caution. — Distinguish carefully between long syllable and long vowel; in **ēxēm'plum** the first two syllables are long, though the vowels are short.

607.

Accent

The accented syllable of a word is the one that is pronounced with more stress or emphasis than the others; so in the word

an'swer, the accent is on the first syllable. In Latin the accent is easily learned according to fixed rules:

1. Words of two syllables are accented on the first: **frā'ter**.
2. Words of three or more syllables are accented on the penult if it is long, otherwise on the antepenult: **lêgā'tus**, **exem'plum**; **dī'cēre**, **si'milis**.

ELEMENTARY GRAMMAR

The material here given may be reviewed in connection with the Lessons, where cross references to it will be found. For the use of those who prefer to review Elementary Grammar before taking up the Lessons, a number of explanations are given here which will also be found in the body of the book. Teachers can easily devise English exercises for drill with classes which need it. The sentences on these pages may be used for that purpose.

608. The Sentence. Subject and Predicate

A **sentence** is a group of words which make complete *sense*. Every sentence consists of two parts — the **subject** about which something is said and the **predicate** which says something about the subject: *The sailor* (subject) *saved the girl* (predicate), **Nauta puellam servāvit.**

A subject or predicate is said to be **modified** by those words which are closely associated with it.

609. Parts of Speech

The words of a language are divided, according to their use, into eight classes called **parts of speech**. These are:

Nouns	Verbs	Prepositions
Pronouns	Adverbs	Conjunctions
Adjectives		Interjections

610. Nouns

A **noun** (from Latin *nōmen*, *name*) is a word that names a person, place, or thing: *Anna*, **Anna**; *island*, **insula**; *letter*, **littera**.

Nouns may be classified as:

a. **Common** (applied to any one of a class): *city*, **urbs**; *girl*, **puella**.

b. **Proper** (applied to a particular one of a class): *Rome*, **Rōma**; *Julia*, **Iūlia**.

Note. — Proper nouns always begin with a capital letter.

611.

Pronouns

A **pronoun** (Latin **prō**, *for*; **nōmen**, *name*) is a word used instead of a noun. The noun whose place is taken by a pronoun is called an **antecedent** (Latin **ante**, *before*; **cēdere**, *go*). There are five classes of pronouns:

a. **Personal** pronouns distinguish the three persons: the person speaking (*I*, **ego**; *we*, **nōs** — first person), the person spoken to (*you*, **tū**, **vōs** — second person), the person or thing spoken of (*he*, **is**; *she*, **ea**; *it*, **id**; *they*, **eī** — third person).

b. **Interrogative** pronouns are used to ask questions: *who*, **quis**; *which*, *what*, **quid**.

c. **Relative** pronouns relate to a preceding (antecedent) word and join to it a dependent clause; *who*, **quī**; *which*, *what*, *that*, **quod**.

d. **Demonstrative** pronouns point out persons or objects definitely — often accompanied with a gesture; *this*, **hic**; *that*, **ille**; *these*, **hī**; *those*, **illī**.

e. **Indefinite** pronouns refer to persons or objects in an indefinite way: *some one*, *some*, *any*, *anyone*, **aliquis**; *no one*, **nēmō**; *each*, *every-one*, **quisque**.

612.

Adjectives

An **adjective** is a word used to describe or limit the meaning of a noun or pronoun:

a. **Descriptive** adjectives are either **common** or **proper**: *good*, **bonus**; *Roman*, **Rōmānus** (see 610 a, b, and Note).

b. **Limiting**:

1. **Article** — **definite** (*the*), **indefinite** (*a*, *an*). There is no word in Latin for “the” or “a.”

2. **Numerals** — **cardinals** (*one*, *two*, *three*, etc., **ūnus**, **duo**, **trēs**, etc.), **ordinals** (*first*, *second*, *third*, etc., **prīmus**, **secundus**, **tertius**, etc.)

3. **Possessive** adjectives (formed from personal pronouns): *my*, *mine*, **meus**; *our*, *ours*, **noster**; *your*, *yours*, **tuus**, **vester**; *his*, *her*, *its*, **eius**; *their*, *theirs*, **eōrum**.

When interrogative, relative, demonstrative, and indefinite pronouns (611) are used as adjectives, they are called respectively:

4. **Interrogative** adjectives: *what street? quae via?*
5. **Relative** adjectives: *He spent a year in Italy, in which country he saw many beautiful things, Annum in Italiā ēgit, in quā terrā multa pulchra vidit.*
6. **Demonstrative** adjectives: *that road, illa via.*
7. **Indefinite** adjectives: *some boy, aliquis puer.*

In English the demonstrative adjectives are the only ones that have different forms in the singular and plural: *this, these; that, those.*

613.

Verbs

A **verb** is a word used to tell something about a subject; it expresses action or situation: *He fought, Pugnābat; He is good, Bonus est.*

a. According to use, verbs are either **transitive** or **intransitive**.

1. A **transitive** verb (Latin *trāns*, *over*; *ire*, *go, pass*) is one in which the action expressed by the verb passes over to a receiver: *Anna is carrying water, Anna aquam portat.*
2. An **intransitive** verb is one whose action does not pass over to a receiver: *Anna is working, Anna labōrat.*

Contrast "set" (transitive) with "sit" (intransitive), and "lay" (transitive) with "lie" (intransitive).

b. Intransitive verbs are either **complete** or **linking** (copulative).

1. A **complete** verb is one which is complete in meaning without an object or other word: *He sails, Nāvigat.*
2. A **linking** verb is one which links a noun or adjective to the subject: *They are good, Boni sunt.*

The chief linking verbs in English are *be, appear, seem, become, feel, look, taste, smell.*

c. An **auxiliary** verb (Latin *auxilium*, *help*) is one used in the conjugation of other verbs: *I am learning; Did you see? They have given.*

614.

Adverbs

An **adverb** is a word used to modify the meaning of a verb, adjective, or other adverb: *He is working now, Nunc labōrat.*

615. Prepositions

A **preposition** is a word used to show the relation of a noun or pronoun, called its **object**, to some word in the sentence: *He sails to the island, Ad`insulam nāvigat.* The preposition is said to **govern** its object.

616. Conjunctions

A **conjunction** is a word used to join words, groups of words, and sentences. Conjunctions may be classified according to their use as:

a. **Coördinate**, connecting words or sentences of equal rank (*and, et; but, sed; or, aut; nor, neque*).

b. **Subordinate**, connecting a subordinate part of a sentence with a principal part (*if, sī; while, dum; because, quod, etc.*).

c. **Correlative**, used in pairs (*both . . . and, et . . . et; neither . . . nor, neque . . . neque, etc.*).

617. Interjections

An **interjection** is a word used to show emotion. It has no direct relation to any other word in the sentence: *O! Alas! Ah! Oh!*

618. Inflection

The change of form which words undergo to indicate differences in use is called **inflection**: *boy — boys, puer — pueri; see, saw, seen, videō, vīdī, vīsus.* The inflection of nouns is called **declension**. Nouns and pronouns are declined to indicate change in number and case, and sometimes gender. Some pronouns indicate person (611, a).

619. Number

A noun or pronoun is **singular** when it refers to one person or thing: *girl, puella; house, aedificium; mouse, mūs; tooth, dēns.* It is **plural** when it refers to more than one: *girls, puellae; houses, aedificia; mice, mūrēs; teeth, dentēs.*

620.

Gender

Gender is a distinction in the form of words corresponding to a distinction of sex. It is shown by change of word, by change of endings, or by use of a prefix: *father*, **pater** — *mother*, **māter**; *master*, **dominus** — *mistress*, **domina**; *he-goat* — *she-goat*. The first words given are **masculine**, the second are **feminine**. Most nouns in English have no gender and are therefore **neuter** ("neither" masculine nor feminine).

621.

Case

Case is a change in the form of a noun or pronoun to show its use in the sentence: *She* (subject) *is here*, *Ea* adest; *I saw her* (object), *Eam* vidi.

622.

Subject and Object

- a.* The **subject** of a verb is that about which a thing is said (608).
- b.* The **direct object** is that which is directly affected by the action indicated in the verb: *Anna carries water*, *Anna aquam portat*. The term object is also applied to a word dependent upon a preposition (615).

623.

Names and Uses of the Cases

- a.* **Nominative**. — A noun or pronoun used as the subject of a verb is in the **nominative** case: *The farmer calls*, *Agricola vocat*.
- b.* **Accusative** (Objective). — A noun or pronoun used as the object of a verb or preposition is in the **accusative** case: *I sent a book to him*, *Ad eum librum misi*.
- c.* **Dative**. — The noun or pronoun that shows for whom or what the direct object is intended is called the **indirect object** and is put in the **dative** case: *I gave him a book*, *Ei librum dedi*.
- d.* **Genitive** (Possessive). — Possession is expressed by the **genitive** case: *the boy's book*, *pueri liber*.

624.

Conjugation

The inflection of verbs is called **conjugation**. Verbs are conjugated to indicate *person*, *number*, *tense*, *voice*, and *mood*.

625. Person and Number

A verb must agree with its subject in person and number: *The girl is good, Puella est bona; The girls are good, Puellae sunt bonae.*

626. Tense

Tense is time. There are six tenses:

- a. The **present** represents an act as taking place now: *He goes.*
- b. The **past** represents an act as having already taken place: *He went yesterday.*
- c. The **future** represents an act that will occur at some future date: *He will go to-morrow.*
- d. The **present perfect** represents an act as completed but from the point of view of the present: *He has gone* (just left).
- e. The **past perfect** represents an act as completed at some definite time in the past: *He had gone* (before something else occurred).
- f. The **future perfect** represents an act as completed at or before some definite time in the future: *He will have gone* (before something else will occur).

627. Progressive and Emphatic Verb Forms

a. **Progressive** (time or action continuous; used with the auxiliary "be"): *They are studying, they were studying, they will be studying, they have been studying, they had been studying, they will have been studying.*

b. **Emphatic** (with the auxiliary "do," used only in the present and past):

1. Used in questions: *Do (did) you know this?*
2. Negative: *I do (did) not know it.*
3. Emphatic: *I do (did) believe it.*

628. Voice

A transitive verb is in the **active voice** when it represents the subject as the doer or agent: *Anna accuses the sailor, Anna nautam accūsāt.*

A transitive verb is in the **passive voice** when it represents the subject as the receiver of the action: *The sailor is accused, Nauta accūsātur.*

Note. — Intransitive verbs are used only in the active voice in English.

629.

Mood

The **indicative mood** is used to assert a fact or to ask a question: *Rome is a great city, Rōma est magna urbs; Where is Anna? Ubi est Anna?*

630.

Infinitive

The **infinitive** is a form of the verb to which *to* is usually prefixed in English: *to go, to sing.* It has tense and voice, but not person, number, or mood.

631.

Participle

The **participle** is a verbal adjective. As an adjective it modifies a noun or pronoun: *a losing fight.* As a verb it may have an object or adverbial modifiers: *losing his balance, he fell off.* The participles which are used in English are:

	ACTIVE	PASSIVE
Present	<i>secing</i>	<i>being seen</i>
Past	<i>having seen</i>	<i>seen, having been seen</i>

632.

Synopsis

A **synopsis** is an outline, showing the given verb in a certain person and number in all moods and tenses (and in both voices if the verb is transitive).

633.

Phrases

A **phrase** is a group of words without subject and predicate.

One important kind of phrase is the **prepositional phrase**, that is, a preposition together with the word or words which it governs: *in great danger, in magnō periculō.*

634.

Clauses

A **clause**, like a phrase, is a part of a sentence but differs from it in having a subject and a predicate.

Clauses are classified as:

a. **Principal**, when used as the leading or independent statement in a sentence: *The girl whom you saw on the street is my sister*, **Puella quam in viā vidistī est mea soror.**

b. **Subordinate**, when used as a dependent statement to modify the principal clause: *The girl whom you saw on the street is my sister*, **Puella quam in viā vidistī est mea soror.**

Subordinate clauses are used as single parts of speech:

1. **Substantive (or noun) clause**: *It pleases me that you came* (your coming), **Mihi grātum est quod vēnistī.**

2. **Adjective clause**: *This boy, who is always good, will receive a reward* (this good boy), **Hic puer, quī semper bonus est, prae-mium accipiet.**

3. **Adverbial clause**: *I gave him the money because he earned it*, **Eī pecūniam dedī quod eam meruit.**

635.

Sentences

a. A **simple sentence** contains one principal clause: *My friend, the farmer, has many horses*, **Amīcus meus, agricola, multōs equōs habet.**

b. A **compound sentence** contains two or more principal clauses connected by the coördinate conjunctions "and," "but," etc.: *My friend, the farmer, has many horses, but I have not seen them*, **Amīcus meus, agricola, multōs equōs habet, sed eōs nōn vidī.**

c. A **complex sentence** contains one principal clause to which one or more subordinate clauses are joined by subordinate conjunctions or by relative or interrogative pronouns: *My friend, the farmer, has many horses which I have not seen*, **Amīcus meus, agricola, multōs equōs habet quōs nōn vidī.**

FRENCH AND SPANISH THROUGH LATIN

Nōtitia linguārum est prīma porta sapientiae, A knowledge of languages is the first door to wisdom. — Bacon

662. The Romance Languages

The Romance (**Rōmānus**, *Roman*) languages — French, Spanish, Italian, Portuguese, and Rumanian — are modern forms of Latin. Fully ninety per cent of the words in French and Spanish are derived from Latin. The Latin student, therefore, who is familiar with the principles that govern vowel and consonant changes, as well as other peculiarities of word transfer, can recognize at a glance a large proportion of words in French and Spanish derived from classical (as opposed to late) Latin.

The following pages are intended primarily for older students who have elected Latin after having begun the study of French or Spanish. These rules will, moreover, be found invaluable for reference by the Latin student who may later elect French or Spanish (see 1).

663. Pronunciation

The distinctions in sound between long and short **e** and **o** (600, *a*) are preserved in French and Spanish, though not in all derived words.

Spanish has no silent letters, except **h**, thus resembling Latin (**h** was weakly sounded in Latin).

664. Syllable Division

Syllable division in French and Spanish is according to the Latin rule (605).

665. Gender

Nouns which are masculine or feminine in Latin retain their gender in French and Spanish: ‘

<i>Lat.</i>	<i>poëta, m.</i>	<i>liber, m.</i>	<i>mōns, m.</i>	<i>libertās, f.</i>	<i>manus, f.</i>
<i>Fr.</i>	<i>poète</i>	<i>livre</i>	<i>mont</i>	<i>liberté</i>	<i>main</i>
<i>Sp.</i>	<i>poeta</i>	<i>libro</i>	<i>monte</i>	<i>libertad</i>	<i>mano</i>

Exception: Most Latin masculines in **-or** become feminine in French: **error, erreur.**

Nouns which are neuter in Latin become masculine in French and Spanish:

<i>Lat.</i>	<i>n.</i>	<i>verbum</i>	<i>tempus</i>
<i>Fr.</i>	<i>m.</i>	<i>verbe</i>	<i>temps</i>
<i>Sp.</i>	<i>m.</i>	<i>verbo</i>	<i>tiempo</i>

Exception: Many Latin neuters, especially those which were commonly used in the plural (which ends in **-a**, like the feminine singular) become feminine singular in French and Spanish:

<i>Lat.</i>	<i>n. plur.</i>	<i>arma</i>	<i>data</i>	<i>pecora</i>
<i>Fr.</i>	<i>f. sing.</i>	<i>arme</i>	<i>date</i>	<i>pécure</i>
<i>Sp.</i>	<i>f. sing.</i>	<i>arma</i>	<i>data</i>	<i>pécora</i>

FRENCH THROUGH LATIN

666.

Accent

The French stress often preserves the Latin accent. The syllables after the accented syllable in Latin were dropped or became silent in French, which fact explains why the French stress is usually on the last syllable.

667.

Vocabulary

Many Latin words remain unchanged in French, as in English: *agenda, alibi, errata, humus, omnibus, ultimum*, etc.

668.

Loss of Letters

1. The final syllable or letters of many Latin words are lost in French or changed to silent **e**: *ami* (**amicum**¹), *mont* (**montem**), *terre* (**terram**).

¹ The accusative of all Latin nouns and adjectives is given because the Romance forms are derived from it, not from the nominative.

2. An unaccented short vowel within a word is often lost: *homme* (*hominem*), *livrer* (*liberāre*), *peuple* (*populus*).

3. A consonant between two vowels is often lost: *cruel* (*crūdēlem*), *dire* (*dīcere*).

4. The first of two consonants is often lost: *frère* (*frātre*).

669.

Vowels

The Latin vowels often remain unchanged in French, but the following changes are to be noted:

(A) *Change to a single vowel*

1. **a** sometimes becomes **e**: *père* (*patrem*), *aimer* (*amāre*), *gré* (*grātum*), *mer* (*mare*).

2. **e** sometimes becomes **i**: *six* (*sex*), *lire* (*legere*).

3. **i** sometimes becomes **e**: *ferme* (*firmum*), *lettre* (*litteram*).

4. **u** sometimes becomes **o**: *nombre* (*numerus*), *onde* (*undam*), *rompre* (*rumpere*).

5. **au** sometimes becomes **o**: *chose* (*causam*).

6. **ae** and **oe** are treated as **e**.

(B) *Change to two vowels*

This was very common in accented syllables (cf. 558, 436).

1. **ai** is from **a**: *aimer* (*amāre*), *main* (*manum*).

2. **ei** is from **e** or **i**: *plein* (*plēnus*), *seing* (*signum*).

3. **oi** is from **e**, **i**, **o**, or **u**: *roi* (*rēgem*), *voie* (*viam*), *gloire* (*glōriam*), *croix* (*crux*).

4. **ui** is from **o** or **u**: *puis* (*post*), *suis* (*sum*).

5. **au** is from **al**, and **eau** from **el**: *haut* (*altum*), *vaut* (*valet*), *beau* (*bellum*).

6. **eu**, **oeu**, is from **o**: *seul* (*sōlum*), *cœur* (*cor*).

7. **ou** is from **o** or **u**: *nous* (*nōs*), *prouver* (*probāre*), *jour* (*diurnum*).

8. **ie** is from **e**: *bien* (*bene*), *pied* (*pedem*).

670.

Consonants

1. **b** and **p** sometimes become **v**: *livre* (*librum*), *avril* (*aprilem*).

2. **p** and **v** sometimes become **b** or **f**: *double* (*duplicem*), *chef* (*caput*), *neuf* (*novum*).

3. **ct** sometimes becomes **it**: *fait* (*factum*), *fruit* (*fructum*).

4. **t** followed by **i** and a vowel in certain cases becomes **s**: *raison* (*rationem*).

5. **s** before a consonant is dropped and the preceding vowel receives a circumflex accent: *maître* (*magistrum*), *tempête* (*tempestatem*).

6. **c** before **a**, especially at the beginning of words, becomes **ch**: *char* (*carrum*), *chef* (*caput*), *chose* (*causam*).

7. Initial **sc**, **sp**, and **st** become **esc**, **esp**, and **est**: *espace* (*spatium*), *espèce* (*speciem*).

In some words the **s** is dropped and the **e** has an acute accent: *étude* (*studium*).

671.

Word Formation

The Latin prefixes used in French have undergone the same changes that have been noted for English in this book (cf. especially **com-**, **con-**, **en-**, **em-**, **sur-**, **tra-**). In addition, attention is called to the change from **dis-** to **de-**, **dés-** (*déshonneur*), **inter-** to **entre-** (*entrevoir*), **per-** to **par-** (*parfait*), **pro-** to **pour-** (*poursuivre*), **sub-** to **sou-**, **sous-** (*souvenir*), **ultra-** to **outre-** (*outremer*).

Latin suffixes in French show much the same form as in English. Note, however, the change of **-ātum** to **é** (*amātum*, *aimé*), **-ōrem** to **-eur** (*auctōrem*, *auteur*), **-ōsum** to **-eux** (*ōtiōsum*, *oiseux*), **-tātem** to **-té** (*libertātem*, *liberté*).

672.

Inflection

1. Nouns of the first Latin declension in **-a** end in silent **-e** in French.

2. The French definite article *le*, *la*, is derived from the last syllable of *ille*, *illa*.

3. The comparative forms of Latin irregular adjectives are to some extent preserved in French: *meilleur* (*melior*), *moins* (*minus*), *pire* (*peior*).

4. The same forms constitute the principal parts of verbs in French as in Latin, with the addition of the present participle.

5. Most French verbs belong to the first conjugation, with infinitive in **-er**. This corresponds to the Latin first conjugation,

with infinitive in *-āre*, but includes a number of verbs of the Latin second and third conjugations.

6. The French second conjugation, with infinitive in *-ir*, corresponds to the Latin fourth conjugation (*-īre*).

7. The French third conjugation, with infinitive in *-re*, corresponds to the Latin third conjugation (*-ĕre*).

8. The Latin personal endings have undergone considerable changes in French. The endings of the French past definite can easily be traced to those of the Latin perfect. Many of the irregular verbs in French preserve forms derived from the Latin:

<i>suis</i>	(sum)	<i>sommes</i>	(sumus)
<i>es</i>	(es)	<i>êtes</i>	(estis)
<i>est</i>	(est)	<i>sont</i>	(sunt)

SPANISH THROUGH LATIN

673.

Accent

Accent is greatly simplified in Spanish if the student understands Latin accent. The so-called irregular accent of nouns and adjectives in Spanish preserves the Latin accent of the accusative case:

<i>Lat.</i>	<i>a'mant</i>	<i>a'nimum</i>	<i>ima'ginem</i>	<i>prōpo'situm</i>	<i>dormī're</i>
<i>Sp.</i>	<i>aman</i>	<i>ánimo</i>	<i>imagen</i>	<i>propósito</i>	<i>dormir</i>

674.

Vocabulary

Hundreds of words in Spanish are either identical with the original Latin form or resemble it so closely that one who knows Latin can understand their meaning at a glance, without knowing the principles that govern word transfer:

<i>Lat.</i>	<i>aqua</i>	<i>arma</i>	<i>causa</i>	<i>hōra</i>	<i>patria</i>	<i>trēs</i>	<i>victōria</i>	<i>dare</i>	<i>ūtilis</i>
<i>Sp.</i>	<i>agua</i>	<i>arma</i>	<i>causa</i>	<i>hora</i>	<i>patria</i>	<i>tres</i>	<i>victoria</i>	<i>dar</i>	<i>útil</i>

675.

Loss of Letters

1. Final letters and syllables are often lost in Spanish, but not to the same extent as in French: *amigo* (*amicum*), *monte* (*montem*), *útil* (*ūtilem*).

2. An unaccented short vowel within a word is sometimes lost: *hombre* (**hominem**), *librar* (**liberāre**), *pueblo* (**populum**).

3. A consonant (especially **b, d, g, h**) between vowels is sometimes lost: *leer* (**legere**), *creer* (**crēdere**), *traer* (**trahere**).

4. The first of two consonants is sometimes lost, especially **n** before **s**: *escrito* (**scriptum**), *autor* (**auctōrem**), *isla* (**īnsulam**).

5. Double consonants become single: *oficio* (**officium**), *nulo* (**nūllum**), *permitir* (**permittere**). Double **n** becomes **ñ**: *ano* (**annum**); **ñ** is also for **ni**, etc.: *señor* (**senior**).

676.

Vowels

The Latin vowels often remain unchanged in Spanish, but the following changes are to be noted:

(A) *Change to a single vowel*

1. Short **i** sometimes becomes **e**: *lengua* (**linguam**), *letra* (**litteram**), *menos* (**minus**).
2. Short **u** sometimes becomes **o**: *onda* (**undam**), *romper* (**rumpere**).
3. **au** sometimes becomes **o**: *oído* (**auditum**), *cosa* (**causam**).
4. **ae** and **oe** are treated as **e**.

(B) *Change to two vowels*

1. Accented short **e** becomes **ie**: *bien* (**bene**), *cielo* (**caelum**), *cierto* (**certum**).
2. Accented short **o** becomes **ue**: *bueno* (**bonum**), *cuervo* (**corpus**), *nuevo* (**novem**).

677.

Consonants

1. **c** sometimes becomes **g**: *amigo* (**amicum**).
2. **p** sometimes becomes **b**: *pueblo* (**populum**).
3. **t** sometimes becomes **d**: *maduro* (**mātūrum**), *padre* (**patrem**).
4. **ct** becomes **ch**: *dicho* (**dictum**), *hecho* (**factum**), *ocho* (**octō**).
5. **li** becomes **j**: *consejo* (**cōnsilium**), *hijo* (**filium**), *mejor* (**melior**).
6. Initial **f** sometimes becomes **h**: *hacer* (**facere**), *hijo* (**filium**).
7. Initial **cl** and **pl** sometimes become **ll**: *llamar* (**clāmāre**), *llano* (**plānum**).

8. Initial **sc**, **sp**, and **st** become **esc**, **esp**, **est**: *escribir* (*scribere*), *esperar* (*spērāre*), *estar* (*stāre*).

678.

Word Formation

The Latin prefixes used in Spanish are easily recognizable. Note the following changes which sometimes occur: **ex-** to **ej-** (*ejercer*), **dis-** to **des-** (*descrédito*), **super-** to **sobre-** (*sobrehumano*).

The Latin suffixes are also used in Spanish. Note the following changes: **-ātum** to **-ado** (*amado*), **-tātem**, **-tūtem**, to **-tad**, **-tud** (*libertad*, *virtud*), **-tiōnem** to **-cion** (*oración*), **-tiam** to **-cia** (*gracia*).

679.

Inflection

1. Nouns of the first Latin declension ending in **-a** retain the **-a** in Spanish: *gracia* (*grātia*), *tierra* (*terra*).

2. Nouns of the second Latin declension in **-us** and **-um** end in **-o** in Spanish: *carro* (*carrus*), *reino* (*rēgnum*).

3. The comparative and superlative forms of Latin irregular adjectives are to some extent preserved in Spanish: *peor* (*peior*), *mayor* (*maior*), *óptimo* (*optimus*), *libérrimo* (*liberrimus*).

4. The Spanish first conjugation, with infinitive in **-ar**, corresponds to the Latin first conjugation (**-āre**).

5. The Spanish second conjugation, with infinitive in **-er**, corresponds to the Latin second and third conjugations (**-ēre**, **-ĕre**).

6. The Spanish third conjugation, with infinitive in **-ir**, corresponds to the Latin fourth conjugation (**-īre**) but also includes many verbs of the third conjugation.

7. Many of the tenses of the Spanish verb are very much like the Latin. Cf. the imperfect:

<i>Lat.</i>	amābam	amābās	amābat	amābāmus	amābātis	amābant
<i>Sp.</i>	amaba	amabas	amaba	amábamos	amabais	amaban

Observe that final **-m** and **-t** of the personal endings of Latin verbs disappear in Spanish.

The Spanish past definite is very similar to the Latin perfect.

8. The Latin perfect participle will suggest at once the past participle of the Spanish verb, no matter how irregular: **impressus**, *Sp. impreso*; **scriptus**, *Sp. escrito*.

Vōx resonet.

¹ Sung to the tune of the Portuguese Hymn, "O Come, All Ye Faithful."

Tūtor es ūnicus,
 Ūnus avum Deus!
 Laudō libēns.
 Patria lūceat,
 Libera fulgeat,
 Vīs tua mūniat,
 Omnipotēns!

THE STAR-SPANGLED BANNER

Tr. F. A. Geyser

Ōh, potestne cernī, prōfulgente diē,
 Salūtātum signum circā noctis adventum?
 Lātī clāv(ī) et stellae, dēcertant(e) aciē,
 Glōriōsē cingunt oppidī mūnīmentum!
 Iaculumque rubēns, glōbus sūrsum rumpēns
 Per noctem mōnstrant vexillum fulgēns.
 Stellātumne vexillum volāns tegit nōs,
 Patriam liberam fortiumque domōs?

Ōh, sīc estō semper, manus sī libera
 Arcet ā patriā bellī vāstātiōnem!
 Triumphante pāce patria prōspera
 Deum laudet quī nōs statuit nātiōnem!
 Victōria me(a) est, quandō causa iūst(a) est;
 Haec nostra sit vōx: "Deus salūs nostr(a) est."

The English pronunciation of proper names is indicated by a simple system. The vowels are as follows: *ā* as in *hate*, *ă* as in *hat*, *ē* as in *feed*, *ĕ* as in *fed*, *ī* as in *bite*, *ĭ* as in *bit*, *ō* as in *hope*, *ŏ* as in *hop*, *ū* as in *cute*, *ŭ* as in *cut*. In the ending *ēs* the *s* is soft as in *rose*. When the accented syllable ends in a consonant, the vowel is short; otherwise, it is long.
